Dividends: were begun, 1892, by old company on the basis of 25 cts. per share monthly. Recent dividends have been: \$2,005,000 in 1905, \$2,700,000 in 1906, \$2,700,000 in 1907, \$2,025,000 in 1908, \$2,700,000 in 1909, \$2,700,000 in 1910, \$2,250,000 in 1911, \$1,800,000 in 1912, \$1,575,000 in 1913, \$1,125,000 in 1914, \$1,800,000 in 1915, \$2,025,000 to July 4, 1916, a total of \$37,747,000.

Property: 13 claims, patented, 230 acres, with sundry adjoining property, including the North Venture and South Venture claims, which have produced a little high-grade ore, in the Verde district of the Black Hills range, at an average elevation of 5,600' above sea level, and about 1,800' above the valley of the Verde river.

Geology: the property shows granular porphyritic igneous rocks, slate and schist, the ore deposit being connected with intrusions of acidic porphyry in dioritic rocks; the rocks are sheared and schistose, the overlying limestone having no genetic connection with the ore deposit.

The mine is opened on a single large deposit of sulphide ore, in a sheared diorite, about 600' in extreme width and 1,900' length, proven to depth of 1,500'. The orebody consists of more or less irregular masses, in a much broken and disturbed area, the ore-shoot having a dip of 72° and containing a 70' quartz vein that carries about 1% copper and from 0.25 to 0.75 oz. gold per ton, this quartz being used for converter linings. The gossan outcrop, originally carrying auriferous and argentiferous oxidized ores to a depth of about 160', has been worked out. The zone of secondary enrichment carries chalcocite, with some covellite, and other secondary copper ores, all highly argentiferous. The primary zone carries mainly chalcopyrite, with a little bornite. No ore assortment is attempted, and no concentration is made, everything from the mine going to the furnaces, the average of ore from all openings formerly being about 6.5% copper and 15 to 32% sulphur, with considerable gold and silver values in the oxidized zone.

Development: to a depth of 2,000', but production is mainly from the 6th and lower levels. The older portions of the mine are worked pillar-and-stall and timbered with square sets, filled with waste, worked-out stopes being filled with culls, and occasionally with barren rock blasted from the mountainside above the mine and milled into abandoned stopes. The oxidized zone has been mined by open cut and by the milling system. In the newer workings, and parts of the old mine where the ground will permit, bottom slicing and a modification of the shrinkage system is used.

The ore is very easily oxidizable, owing to its high sulphur tenor, and is therefore liable to spontaneous combustion, while, owing to the more or less shattered condition of the orebody, it is difficult to entirely prevent the access of air, very little of which will keep a sulphur fire burning incessantly. The fire on the 400' level has been burning since 1897, and the mine is on fire in various places, from the 7th level to surface, fire in stopes not worked being walled off by cement bulkheads having steel gates. Mining has been in progress for several years, in the fire zone, under the Plenum system, introduced by J. J. Shaw. By this method, air under pressure is blown against the face of the stopes by electric fans. The air feeds the fire, which is a smouldering one, but drives back the deadly fumes into the shattered rock mass and permits the extraction of ore. The fire, while dangerous and annoying, does not destroy the copper, all of which will be recovered eventually, by mining or leaching.

Equipment: the compressed air plant on surface includes a 2-stage compressor, 28 and 52 and 26 and 44 $\frac{1}{4}$ x48" and 3 smaller units, including 2 machines driven by 600-h. p. and 300-h. p. motors, also a compressor driven by a 275-h. p. motor. No. 3 hoisting shaft has a first-motion hoist, good for 1,500'. No. 5 shaft will have an Allis-Chalmers mechanical double-drum hoist, with electrical equipment, speed of 1,900' per minute, and good for 3,000' depth; 7-ton skips operated in balance will be used. Haulage equipment underground includes nine 4-ton, four 6-ton and three 7-ton locomotives.

Smelter: the old smelter, built on the hanging-wall side of the mine and too close to the orebody, had considerable trouble from caving ground and was closed down and dismantled.

The new 3,000-ton smelter designed by Repath and McGregor has been operating since June, 1915. It is one of the most modern in the world, consists of a crushing and sampling plant, calcining plant, blast furnace, converter, and reverberatory departments, and a power house, together with coke and ore-storage yards and bins with a total capacity of 26,000 tons. Buildings are built of steel and concrete.

The crushing and sampling plant has an Allis-Chalmers 30x18" jaw-crusher, driven by a 50-h. p. motor; product passes up a long incline belt conveyor, capacity 2,400 tons daily, to top of sampling mill. This mill has three 20x10" Blake crushers, three sets of Allis-Chalmers crushing rolls, 54x24", 36x12" and 24x12"; two 4x14' Gates trommels and four Snyder samplers with final sample of 1 to 250. Crusher product goes over conveyor belts to storage bins for fines or to the calcining plant.

The calcining plant has six 21 $\frac{1}{2}$ ' Wedge furnaces, each with a daily capacity of 96 tons. The 7 hearths, 6 roasting and 1 drying, are lined with concrete. The plant is built so that it can be enlarged when required. Cooling blast is furnished by 1 or 2 No. 6 Sirocco, 3-oz. blowers, each having a capacity of 25,000 cu. ft. of free air per minute, driven by a 30-h. p. motor. Fumes pass to the dust chamber building, sides of brick and steel, roof of 24-gauge copper equipped with baffle plates, and then to the 400' stack. Calcines, as well as dust, are drawn into 15-ton cars, drawn by 10-ton electric locomotives.

The reverberatory plant has three 19x100' furnaces, placed at one end of the furnace building. Calcines, with oxidized ores, are fed to these furnaces. Slag is drawn off into Treadwell motor-tilted pots, drawn by an 18-ton electric locomotive, of which there are three.

The blast furnace plant has four 48x320" blast furnaces, designed by Repath and McGregor. Feed consists of mattes from the reverberatories, rich oxidized and sulphide ores, with some calcite. Gases go to a second

dust chamber, similar to the other, but with steel plate sides, before going to the 400' stack. Ore and flux for the furnaces is brought by 4 to 6 ton side-discharge cars. Reverberatory matte is poured hot.

The converter plant has four stands with five 12' shells of the Great Falls type, supplied by Allis-Chalmers Mfg. Co. Converters are basic, lined with Harbison-Walker magnesite. Tilting is done by 50-h. p. direct current motors. Copper is poured into two copper casting machines, each operated by a 20-h. p. direct-current motor. There is a 75-ton reheating furnace in connection with these. Slag is drawn into Treadwell pots and charged hot into the reverberatories together with rich blast furnace slag.

The power plant will generate only part of the electric current used, remainder being purchased from the Arizona Power Co. Current is received at 44,000 volts and stepped down to 2,200 volts. When the reverberatories are in operation waste heat from them will be utilized for 6 Stirling Type M boilers, 713-h. p. each, 2 to each furnace. Three Parker type water tube boilers, using fuel oil, are held in reserve. A pumping station, equipped with 2 pumps, on the Verde River supplies the water. The cooling system of the furnaces, compressors, and the condensing system of the steam units are taken care of by a central cooling plant and pumping station. There are 3 condensers, 2 Weiss and an Allis-Chalmers, and 5 Allis-Chalmers centrifugal pumps, driven by, motors.

There are 4 blowing engines, supplying the converters; a Southwork-Rateau-Smoot turbo-blower, capacity 24,000 cu. ft. free air per minute at 16 lbs. pressure, 2,500 r. p. m.; a Nordberg, Southwork and an Allis-Chalmers, with capacities of 21,000, 21,000 and 15,000 cu. ft. respectively. A Nordberg 2-stage compressor furnishes air up to 100 lbs. pressure, capacity 3,000 cu. ft. per minute. Air for the furnaces is supplied at 2½ lbs. pressure by 5 Roots blowers, two of 400 cu. ft., two of 300 cu. ft., and one of 224 cu. ft. Blowers are motor driven. A 16x32x36" Allis-Chalmers, tandem-compound engine operates one of the 400 cu. ft. blowers; a 3-cylinder Diesel engine operates one of the 300 cu. ft. blowers.

The electric generating units include 2 Parsons type steam turbines and generators; one is a 500-kva. Westinghouse unit, the other a 1,500-kva. unit made by Allis-Chalmers Mfg. Co., the former delivering current at 440 volts, the latter at 2,300 volts. Two Westinghouse synchronous 1,200-k. w. motor-generator sets take alternating current at 2,200 volts and deliver direct current at 250 volts for the electric locomotives, converter motors, cranes, etc. There are three 300-k. w., three 200-k. w. and three 50-k. w. transformers, also three 30-k. w. transformers.

The United Verde & Pacific railway, controlled by the company, has 28 miles of narrow-gauge line, traversing a very difficult country, connecting the mine and works with the Santa Fé, Phoenix & Prescott railroad at Jerome Junction. A standard-gauge railway, built 1912, by the Atchison, Topeka & Santa Fé R. R. Co., connects the new smelter at Clarkdale with its main line at Cedar Glade. For transportation between the mine and smelter another railroad, the Verde Tunnel & Smelter R. R. Co., has been built; it is operated as a separate organization.

It is proposed to work the surface and upper level orebodies with steam shovel, 1916.

In early years the United Verde made copper for 5 cts. or less a pound, if one deducts gold and silver values from the cost. The reported cost per pound of finished copper, after deducting gold and silver values, was 9.17 cts. per lb. in 1904; 9.27 cts. per pound in 1905; 8.69 cts. in 1906, and 10.54 cts. in 1907. Under average circumstances the cost may be figured as 9 to 10 cts. per lb. The United Verde mine has been lied about more industriously than almost any other mine in the world, especially in the literature sent out by new copper mining companies with stock for sale. The United Verde has erroneously been pointed out, as an example of blind luck, but the mine was taken by Senator Clark, when generally considered worked out, and it was developed, by cash and brains, into a magnificent copper mine, the credit being due to the keen mining sense and business acumen of Senator Clark and not to chance. The mine is one of the best copper mines of the world, with many years of large and profitable production ahead.

Company also owns the Copper Giant mine, Wm. Neagle, supt., near Hackberry—acquired in 1913. It is developed by 500' shaft, with various levels which show silicious ore carrying 2-7% copper with small gold-silver values. A concentrating plant will be erected if further development warrants it.

UNITED VERDE EXTENSION MINING CO.

ARIZONA

Office: 233 Broadway, New York. **Operating office:** Prescott, Yavapai Co., Ariz. **Mine office:** Jerome, Yavapai Co., Ariz. **Officers:** James S. Douglas, pres. and gen. mgr.; George E. Tener, v. p.; Louis E. Whicher, v. p.; Chas P. Sands, sec.-treas.; preceding with W. J. Maloney, Paul Armitage, Harold Pierce, Archibald Douglas and Andrew J. Pickrell, directors; David P. Morgan, supt.

Inc. 1902, in Maine, as a reconstruction of the United Verde Extension Gold, Silver & Copper Mng. Co. **Cap.**, \$3,000,000; shares \$10 par. Reorganized in Delaware, cap., \$4,000,000; shares \$10 par; and again reorganized 1912, and cap. reduced to \$750,000, shares 50c par. In this reorganization, approximately 360,000 shares were set aside for exchange, on a share for share basis for old shares outstanding; about 40,000 shares were issued in liquidation of debts; 150,000 shares were issued to Jas. S. Douglas for services; 50,000 shares were sold to Mr. Douglas for \$25,000 cash; 400,000 shares were optioned to Mr. Douglas and his associates with the right to purchase all or a part of this block at par value at any time prior to June 15, 1915; and 500,000 shares were reserved for treasury purposes. **Federal Trust Co.**, Boston, registrar; **State Street Trust Co.**, Boston, transfer agt. Shares are listed on the Boston curb, traded on New York Curb. Annual meeting, 3rd Tuesday in Feb.

Receipts 1915, were \$540,058 and expenses \$336,661, made up from:

Sale of ore.....	\$458,017.43	Operating expenses	\$175,606.57
Sale of stock.....	50,000.00	Construction expenses....	53,562.60
Miscellaneous	5,040.73	Property & overhead expenses	83,068.23

Cash balance Feb. 10, 1916, was \$329,451 with \$160,000 still owing from ore shipped in 1915.

Dividends: an initial quarterly dividend of 50 cts. per share was paid August 1, 1916. Company reported late in June, 1916; cash on hand, \$793,882; due from ore shipped approximately \$1,000,000; it accumulated a larger surplus for purpose of development and building a smelter.

Property: 5 claims, patented, about 75 acres, known as the Little Daisy

Group, a two-thirds interest in the adjoining Florencia claim, and an option on 39 claims, 590 acres adjacent to the company's property on the S. and S. E. Payment of \$27,950 had been made Jan. 1, 1916, on a total price of \$130,000 for this tract.

The Jerome Verde option was relinquished June 15, 1915, as the 2,127' of development work from the Daisy shaft failed to disclose ore of commercial importance.

The early exploration work of the company was unsuccessful and an option was taken in 1913 on the Jerome Verde group, and a new shaft, the Edith, started 1,500' farther east, sunk to a depth of 1,200'. Verde Extension's development of the Verde ground was disappointing but in the company's own ground a large body of very rich chalcocite ore was encountered on the 1,200' level, Dec., 1914. This orebody was developed and worked during 1915, and the shaft was sunk to the 1,400' level. Feb., 1916, a drift on this level cut the downward extension of the bonanza orebody found on the 1,200' level.

Development: Aug., 1916, shows the orebody on the 1,400' level to be 250' wide and 300' long, with an average content of 10% copper. A raise being driven to connect with the 1,200' level is up 103' and shows an average of 14% copper. A 50' winze sunk from 1,400' level to be deepened to 1,600', shows an average of 11% copper, proving the downward extension of the orebody and indicating its probable extension to much greater depth. The development to date makes the mine as great a one as its more famous namesake.

History: original development was by an 800' vertical shaft, the Edith, on the Little Daisy claim, about 1,700' from the main shaft of the United Verde mine, with collar 450' lower. This shaft, after passing through 50' of iron stains, encountered copper carbonates, continuing for depth of about 150', succeeded by conglomerate, and from a depth of 425' to 578' passed through schist carrying copper sulphides and manganese. These old workings total about 5,000' but develop only a little ore of about 2% copper, 1 oz. silver and \$3 gold, on the 800' level. A 130' winze below this level was bot-tomed in decomposed schist, showing considerable copper.

Development: from Oct. 10, 1914 to Jan. 1st, 1916, includes 464' of drifts and crosscuts on the 800' level; 2,499' on the 1,100' level, 1,374' on the 1,200' level; 1,801' on the 1,400' level, in company ground, beside the 2,127' Jerome Verde work in that company's tract. No payable ore in commercial amount has, however, been found above the 1,200' level, though favorable indications exist.

The ore thus far developed lies on the northerly downthrown side of a big fault, with a drop of 650' or thereabouts, as shown by the limestone strata on each side of it. Its value can be judged from the fact that with limited hoisting capacity and packing the ore $1\frac{1}{4}$ miles on burros, 9,753 tons were shipped in 1915, of which 3,579 tons averaged 43.99% copper and the balance 17.6% copper.

Ore reserves: estimated about July 1, 1916, give 1,500,000 tons of 10% ore blocked out.

Equipment: includes an electric hoist and air compressors, and a $1\frac{1}{4}$ mile rope tramway to the railway line. Electric power is used throughout, current being taken from the Arizona Power Co. About 150 men are employed.

Production: by July, 1916, the company was shipping 7,000 tons of ore, averaging about 20% copper, per month, resulting in net receipts of \$350,000 monthly.

The extent of this remarkable orebody is as yet unknown, but it is evi-

dent the mine is of the first magnitude and that the property gives the stock a valuation of better than \$30 a share on present developments.

UNITED WESTERN MINES CO.**ARIZONA**

Oatman, Ariz. **Officers:** W. K. Ridenour, pres. and treas.; H. E. Woods, v. p.; W. P. DeWolf, sec.; with W. K. Ridenour, S. E. Vermilyea, E. H. Newland, H. E. Woods, M. Lines, directors.

Inc. in Arizona, **Cap.**, \$1,000,000; shares \$1 par; in treasury, 600,000. Listed on San Francisco and Los Angeles stock exchanges.

Property: 4 claims, 65 acres, one mile S. W. of Oatman, Mohave Co., crossed by main road connecting Gold Road and Oatman, and adjoining property of the United Eastern Company along what appears to be a continuation of the main ore zone of that property. Also owns the Oofy Goofy group and water rights 4 miles N. W. of Oatman, total 125 acres. Ore is free milling gold containing little silver. Pay ore occurs in shoots of undetermined extension. Development shows strong vein on the upper levels but below milling grade. On 505' level the vein is large, wet and reported to show milling values.

Development: comprises a shaft 500' deep with crosscuts at 200' and 500'. At the latter depth a heavy flow of water from the vein temporarily stopped work, 1916. **Equipment:** includes 50-h. p. hoist, compressor, buildings, etc.

Property a good prospect, but drifting alone can determine its value.

UNITED ZINC CO.**MISSOURI**

Office: 6 Beacon St., Boston, Mass. **Mine office:** Joplin, Mo. **Officers:** L. R. Greene, pres.; W. I. Bullard, v. p.; H. P. Mason, sec.; H. C. Young, treas.; the foregoing and F. R. Tibbets, R. B. Young, C. A. Dingey, G. H. Nolte, G. T. Fletcher, directors.

Inc. 1899, in N. J.; re-inc., 1904, in Maine. **Cap.**, \$450,000 Com. and \$482,425 Pfd.; Com. \$5 par; Pfd., \$25. No bonded debt. Puritan Trust Co., Boston, transfer office; Old Colony Trust Co., Boston, registrar. Annual meeting, January, Portland, Me. Traded in on Boston curb.

Property: 3,800 acres developed and producing, in Joplin district, Mo. and in Kansas. Ores are zinc and lead.

UNITED ZINC SMELTING CORP. WEST VIRGINIA & MISSOURI

Office: 115 Broadway, New York. **Officers:** W. Kenefick, pres.; R. A. Cowles, v. p.; Arthur Day, v. p. and treas.; the foregoing and A. L. Davis, M. M. Pearlman, C. M. Pynchon, H. Raymond, W. F. Reis, B. Lissberger, directors.

Inc. Apr., 1916, in New York. **Cap.**, 600,000 shares without par value, but offered for subscription at \$12.50 per share. No funded debt. Bankers Trust Co., New York, transfer agent. Equitable Trust Co., New York, registrar. Listed on New York Curb.

Controls through stock ownership all of the assets of the Pearlman Co., Inc., and the Clarksburg Zinc Co., and a substantial majority of the common shares of the Kenefick Zinc Corporation. The Pearlman Co., Inc., owns a large zinc mill and refining plant at Clarksburg, W. Va., comprising 3,648 retorts with capacity of 30,000,000 lbs. of spelter per year, to be increased by the addition of 1,824 retorts; a pottery plant with a capacity of 300 retorts per day; a power plant and a refining plant with a capacity of 15,000,000 lbs. of spelter per year; all the capital stock of the Clarksburg Zinc Co.; owns patents, controls brands and trade-marks.

The Kenefick Zinc Corporation is the largest producer of zinc concentrates in the Joplin, Mo., district, the capacity of its mines and mills being 25,000 to 30,000 tons of concentrates per year. The United Zinc Corpora-

tion has offered to exchange $1\frac{1}{4}$ shares of its stock for each common share of the Kenefick Zinc Corporation.

Properties operated by the U. Z. Corporation are the Media Mining Co. and the Electrical Zinc & Lead Mining Co., north of Webb City; the Coyote Mining Co., and the Airedale Mining Co., west of Joplin; and the Milan Mining Co., at Prosperity. To this list will be added the new mine on the Muskingum land. This lease adjoins the Coyote mine on the north and practically the same run of ore is to be worked. Drilling on the Muskingum lease showed sheet-ore beginning at a depth of 181', continuing to 195'. Assays of the drill clippings gave an average of $3\frac{1}{2}\%$ blende and lead, from which a mill recovery of almost 3% can be expected, which is about the saving being made by the company's Coyote and Airedale mines. In June, 1916, three drill strikes were reported, two exceptionally good, on a 26-acre lease of the Muskingum Mining Co.'s land, one mile west of Joplin. Construction of a 350-ton concentrating plant has been started.

Plans are being prepared for the construction by the United Zinc Corporation of an acid plant for the manufacture of by-products.

UNITY GOLD MINES CO.

IDAHO

Offices: % Underwriters Idaho Mines Syndicate, 120 Broadway, New York and Boise, Idaho. **Officers:** Jas. H. Hawley, pres.; L. M. Hart, v. p.; George C. Luebbers, sec.; George W. Fletcher, treas.; J. A. Czizek, mgr.; above are directors.

Inc. April, 1916, in Del. **Cap.**, 500,000 shares; \$5 par; outstanding 200,000 shares. Security Transfer & Registrar Co., New York, transfer agt. and registrar. Listed on New York Curb.

Property: 2 groups of claims, 120 acres, including the Little Giant and Charity mines, in the Warren mining district, Idaho Co., 40 miles from a railroad. Has been idle for several years. Claims said to cover 2 distinct veins for 4,500' along the outcrop. In addition company owns a millsite and $4\frac{1}{2}$ miles of ditches and pipe lines with water rights. **Ore:** is gold in a series of parallel quartz veins.

The Little Giant, said to have yielded \$1,000,000 in the past is claimed to show an orebody 4' wide and 50' thick, proven for 120' east of the shaft, that will assay better than \$40 per ton, with \$20 dump ore. **Development:** by tunnels and shallow shafts. No work below the 200' level. Present management is driving a tunnel to cut the veins 400' below present workings; estimated time to complete this tunnel, 9 months from March, 1916. The Charity mine has been developed by a 100' shaft and shallow tunnels. Plans continuing a tunnel that will cut the vein 100' below present workings and building a 10-stamp mill. No estimate of ore reserves given.

Property is a prospect.

UNIVERSITY MINES, LTD.

ONTARIO

Is a subsidiary of the La Rose Consolidated Mines Co., which see.

U. P. R. MILLING & MINES CO.

COLORADO

Robt. L. Martin, agent, 310 Quincy Bldg., Denver, Colo. **Property:** the Gregory-Buell group of mines at Central City and the Buell concentrator. Mines have vein with gold and silver-bearing copper ores, developed by 700' shaft, equipped with steam hoist and air compressor. The mill has 45 stamps and handles about 130 tons daily. Operating, 1915-16.

UTAH-APEX MINING CO.

UTAH

Office: 79 Milk St., Boston, Mass. **Mine office:** Bingham Canyon, Utah. **Officers:** R. F. Haffenreffer, Jr., pres.; J. J. Murphy, v. p.; C. G. Schirmer, sec.-treas.; H. M. Burton, asst. treas.; W. L. Creden, mgr.; preceding with Louis Ross, C. M. Brewer and J. W. Saladine, directors. V. S. Rood, supt. **Inc.** May, 1902, in Maine, as a merger of the Copperfield Mining Co. and

York Mining Co. **Cap.**, \$3,000,000; increased 1906, from \$2,500,000; shares \$5 par; issued 528,200 shares. **Bonds:** \$500,000, authorized, at 6%, convertible; outstanding 26,000, Dec. 1, 1915. Company absorbed the Highland Boy, Petro, Minnie and Phoenix mining companies. Federal Trust Co., Boston, registrar; Paul Revere Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in September.

For fiscal year ending Sept. 1, 1915, gross ore sales and royalties were \$848,820, with mining, development and milling costs of \$577,323, leaving a gross mining profit of \$271,497. Company ended year with \$171,063 cash on hand. After payment of dividend July 1, 1916, there was \$500,000 cash on hand.

Net earnings for quarter ended May 31, 1916, were \$417,948, compared with \$202,719 in previous quarter, and \$65,011 in preceding quarter.

Dividends: initial quarterly dividend, 12½c, paid Oct. 1, 1915, increased with dividend No. 4 to 25c, paid July 1, 1916.

Property: 33 claims, 254 acres, including the York, Copper Field, Petro, Highland Boy Consolidated and Phoenix groups, adjoins the Utah Consolidated on the S. and W., on York hill, Carr Fork canyon. **Geology:** claims show limestone and quartzite, carrying the Parnell, Petro, York and Andy bedded veins. These veins are cut by several fissures which have been more or less developed. The Dana, the principal orebody, is apparently a contact deposit between quartzite and limestone, showing an ore-shoot standing vertically, without disseminations in the contact, up to 15' in width and 500' in length on the 4th level. The mine primarily is a producer of high-grade lead ore, but has considerable copper, and some zinc; all ores carry silver and gold values with an excess of iron, giving low smelting charges. First-class ores carry about 2% copper, and \$6 to \$8 combined gold and silver values per ton; the second class copper ores carrying about \$3 per ton in combined gold and silver values. First-class lead ores carry 35 to 50% lead, with silver and gold values, and second-class lead ores range 7 to 14% in lead tenor, with small gold and silver values.

Development: by 3 shafts and 6 tunnels, with about 63,000' of workings. The main working shaft is down to the 1,300' level. The tunnels, known as the Parnell, Minnie, Smilax, Andy, Andy No. 2 and Parvenu, are spaced at 200' vertical intervals, and are connected by incline blind shafts, with electric hoists, on the Parnell vein, which is estimated by the company to be 5' in width and to be mineralized for about 1,000' in length and to 2,000' in depth. The Andy tunnel develops 3 ore-shoots, on the Parnell vein. The Parvenu tunnel, which is the principal working, is about 1 mile in length, cutting the Parnell vein with a back of about 2,200'. Since the decline in the copper market 1907, attention has been devoted mainly to silver-lead ore. A silver-lead orebody opened in the Parvenu tunnel, having a maximum thickness of 100', with a width of better than 100', and length undetermined, shows direct-smelting ore of 15 to 20% lead, with 3 to 5 oz. silver per ton, and excess of iron, estimated to carry net values of \$8 to \$10 per ton. Mine output for 1915 was 35,095 tons crude shipping ore, 77,792 tons milling ore and 5,372 tons copper ore. Cost per ton mining for 1915 was \$3 as compared with \$3.25 in 1914.

A 3,000' Bleichert aerial tram, not in present use, runs from the portal of the Andy tunnel to a loading station. Ore is shipped over a spur track of the railway line of the Utah Copper Co.

Equipment: includes two 15-drill air compressors and 2 electric hoists, 1 of which is a double-drum Davis hoist installed at the 7th level station in the Parvenu tunnel.

The old Phoenix mill at the mouth of the Parvenu tunnel was dis-

mantled and a new 200-ton mill built 1909, on the same site. The new mill is said to effect a concentration of 4 into 1, with a saving of about 77% of assay values. In 1914, company increased the capacity of the concentrator to about 350 tons daily, and in 1915 a flotation equipment was added. The mill treated an average of 312 tons per day for the year ending Aug. 31, 1915; 35,825 tons of concentrates were recovered. Average cost of milling was 72.2c per ton as compared with 79.8c the previous year.

Company has contracts with U. S. Mng. & Sm. Co. and American Sm. & Ref. Co. for daily shipments of 300-400 tons lead-zinc ore and lead ore and concentrates respectively. Employs 400 men.

Production: for 1915 was 32,000,000 lbs. lead, 2,400,000 lbs. copper, 4,000 oz. gold and 560,000 oz. silver. By March, 1916, the monthly output had reached 4,000,000 lbs. lead; this rate was being maintained in July.

Management plans putting the shaft through to surface, thus opening 650' of new ground and hoisting to surface in the future.

1916 earnings to June 1 have averaged \$120,000 per month, being as follows: Jan., \$96,009; Feb., \$82,036; March, \$107,936; April, \$152,307; May, \$162,476. The company's phenomenal profits are largely due to the increased price of the metals produced and cannot continue indefinitely.

Property considered promising, and earnings should continue even at normal metal prices.

UTAH-ARIZONA GOLD & COPPER MINING CO. ARIZONA

Idle Office. 625 Dooly Bldg., Salt Lake City, Utah. Mine near Chloride, Mohave Co., Ariz. Heber S. Cutler, pres.; J. F. Shelley, v. p. and gen. mgr., Shelley, Idaho; John W. Geiger, sec.-treas.; preceding officers, W. J. Burton, Geo. F. Shelley and M. Thomas, directors.

Inc. Nov. 11, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued 961,023. Annual meeting, second Tuesday in September.

Property: 60 claims, unpatented, about 1,200 acres, and a 20-acre mill site, in the Weaver district, 18 miles N. W. of Chloride, the nearest rail point, shows quartz veins traversing granite and mica-schist, carrying gold-copper ore. Property includes the Golden Gate mine, developed by 2 incline shafts of 125' and 135', on parallel veins, and several short tunnels, with total of about 2,000' of workings. **Equipment:** includes a 5-stamp mill, idle since 1914.

UTAH BALTIMORE CONSOLIDATED CO. UTAH

Officers: J. P. Evans, pres., 408 S. 13 E. St., Salt Lake City, Utah; J. M. Williams, v. p.; C. A. Doe, sec.-treas.; J. T. White, W. D. Williams, directors.

Inc. in 1916. **Cap.**, \$1,000,000; shares 5c par; no indebtedness.

Property: 10 claims, 5 in Beaver Co., Utah, known as the Mollie Pitcher group, 5 in the Rocky district, known as the Bill Williams group. Mollie Pitcher group has a 100' shaft in vein of copper ore, said to be 60' wide and of shipping grade. Loading station on R. R. about a mile from mine.

UTAH BELLEVUE MINES CO. IDAHO

Bellevue, Idaho. **Officers:** A. W. Kelley, pres. and mgr.; T. H. Saxman, v. p.; L. H. Goulet, sec. and treas.; with J. E. Naylor and M. Cullinson, directors. **Cap.**, 500,000 shares; in treasury, 165,000. No bonded indebtedness.

Property: 3 claims in Wood River district, Blaine Co., Idaho, said to show silver, lead, zinc ore. Developing in 1915.

UTAH CENTENNIAL MINING CO. UTAH

Pleasant Grove, Utah. **Officers:** J. E. Thorne, pres.; L. L. Nelson, v. p.; D. Noble, sec. and treas.; J. W. Thorne, J. E. Thorne, C. Thorne, L. L. Nelson, directors.

Inc. 1907. Cap., 1,000,000 shares; par 5c; outstanding 250,000 shares; assessable. Annual meeting in April.

Property: 10 claims in American Fork Canyon, American Fork district, Utah Co. Fissure vein carries gold, silver, lead, copper ore. Developed by a 450' tunnel. Property is a prospect undergoing development.

UTAH CONSOLIDATED MINES CO. OF TINTIC. **UTAH**

Office: 425 Atlas Bldg., Salt Lake City. T. R. Cutler, pres.; H. J. Fitzgerald, sec.-treas. **Inc. in Utah.** Cap., \$1,000,000; shares \$1 par; non-assessable; all issued. Listed in Salt Lake City.

Property: 100 acres in Tintic mining district, shows silver-lead ore. Developing in 1916.

UTAH CONSOLIDATED MINING CO. **UTAH**

Office: 42 Broadway, New York. **Operating office:** 608 Dooly Block, Salt Lake City, Utah. **Mine office:** Bingham Canyon, Utah. **Officers:** R. H. Channing, Jr., pres.; Adolph Lewisohn, v. p.; C. N. King, 2nd v. p.; Sidney Chase and Maxwell Woodhull, directors; A. H. Melin, sec.-treas.; Frederick Cowans, gen. mgr.; A. S. Winther, supt.; T. S. Van Wagoner, purch. agt.

Inc. 1903 in New Jersey. Cap., \$1,500,000; shares \$5 par. Is a reconstruction of Utah Consolidated Gold Mines, Ltd., a British corporation that in turn succeeded the Sevier Gold Mines, Ltd., Oct., 1896. Property of the Utah Consolidated Mining Co. is 2,490 shares of the 2,500 shares of the capital stock of the Highland Boy Gold & Copper Mining Co., of New Jersey, the latter corporation holding direct title to the Utah properties. The company also owns 8,250 shares of stock of the Anaconda Copper Mng. Co., stock derived from sale of Internat'l S. & R. Co. Shares are listed on the Boston and Salt Lake stock exchanges. Annual meeting, first Tuesday in April.

The company's total income for 1915 was \$2,611,240, with surplus of liquid assets over liabilities of \$1,128,122. Net earnings were \$1,038,637 in 1903, \$1,164,348 in 1904, \$1,887,385 in 1905, \$2,835,008 in 1906, \$1,179,412 in 1907, \$326,312 in 1908, \$154,263 in 1909, \$65,348 in 1910, \$438,430 in 1911, \$603,923 in 1912; \$636,470 in 1913, \$565,665 in 1914, \$1,128,122 in 1915; estimated at \$2,250,000 for 1916.

Dividends:

1903.....	\$3.20	1908.....	\$2.00	1913.....	\$1.50
1904.....	3.00	1909.....	2.00	1914.....	2.00
1905.....	3.50	1910.....	.50	1915.....	2.00
1906.....	5.00	1911.....	.50	1916.....	1.50
1907.....	7.00	1912.....	1.50		

1916 dividends: 75c in April, 75c in June, 50c being regular and 25c extra; 75c in September.

Total dividends to July 1, 1916, \$40.64 per share, or \$12,192,000. Current earnings are about \$6 per share.

Property: 43 claims, patented, 404 acres, known as the Highland Boy group, in Carr Fork canyon, 2½ miles from Bingham canyon. The Highland Boy mine was a considerable producer of silver-lead ore, 1870-90.

In 1915 the Bingham Copper Boy group adjoining the Utah Cons. on the north was purchased for \$18,747. Property promising but undeveloped.

Geology: property has 6 ore deposits which are replacements of limestone beds, 150 to 300' thick, with quartzite above and below. These beds dip from 25 to 45° N. and the rocks are cut by a series of porphyry dikes that are nearly vertical and run N. E. The ore deposits form well-defined shoots with E.-W. strike and N.-E. pitch. They are large, varying up to 100' in width and 100 to 200' in length, and are separated by barren limestone; the largest orebody so far developed is said to be 320' in extreme

horizontal width and 340' in length. An ore-shoot carrying galena was found in the lower workings in an extension of the Yampa limestone. The predominant ore of the mine carries chalcopyrite, with some bornite and chalcocite, associated with pyrite in a limestone gangue.

In 1915 lead ore averaging 1' to 12' wide was drifted on for 50' and is said to average about 30% lead, 11 oz. silver, .06 oz. gold and 8% copper.

Development: the Highland Boy mine is opened by an old 900' shaft, and 7 tunnels, of 1,000 to 2,600' length. No. 7 tunnel, 700' below the crest of the mountain, is 2,600' in length and is the main avenue of extraction, all tunnels being connected, and ore milled, through chutes, to the bottom tunnel. There are 2 blind shafts, deepest 500', starting from the 700' level, with large electric hoists, raising ore to that point for extraction by the electric haulage plant in No. 7 tunnel. The ore breaks easily and is extracted by the top-slice caving system, ore is broken mainly on contract.

New openings were 20,510' in 1913; 19,778' in 1914; 19,890' in 1915.

Ore reserves: estimated at end of 1914 as 256,321 tons of 1.9% copper ore and 50,365 tons of 16.48% lead ore; at end of 1915: 266,700 tons of 1.9% copper, \$1.00 gold and 0.69 oz. silver ore and 43,500 tons of 16.20% lead ore with 80c gold, 4.96 oz. silver and 0.7% copper.

A 12,700' aerial tram leads from the portal of No. 7 tunnel to ore bins on the Rio Grande Western railway. There is a subsidiary aerial tram, crossing Carr Fork canyon, used for handling lumber and mining supplies.

While the great orebodies of the mine are worked out, the property is far from exhausted and development work is keeping pace with ore extraction.

Company mined 207,119 tons of 2.22% copper ore and 65,129 tons 15.16% lead ore in 1915, the latter containing 2.92 oz. silver per ton and 0.47% copper. Lead ore averaged \$12.51 per ton gross or \$8.46 net, deducting smelting charges, etc.

Production:

	Lbs. Copper	Lbs. Lead	Oz. Silver	Oz. Gold
1915.....	8,836,091	17,777,604	370,985	19,387
1914.....	7,584,391	14,588,276	284,196	15,528
1913.....	7,710,668	19,208,063	378,960	14,172
1912.....	6,506,814	8,734,398	230,004	14,042
1911.....	9,162,023	3,311,939	160,366	16,730
1910.....	7,489,471	154,321	14,802
1909*.....	10,043,900
1908*.....	10,648,243
1907.....	13,987,557	390,296	34,554
1906.....	18,533,974	457,812	42,001
1905.....	17,264,474	374,685	28,290
1904.....	13,553,483

Exploration work for 1916 includes sinking the Incline shaft 400' deeper and starting a new level; diamond drilling on the 7th level; opening up the sulphide copper ore-shoot on the 13th level and a lead orebody in the western extension of same level.

Company has capable management, and though no estimate of the life of the property is warranted, it is believed the mineral bearing area will be profitably productive for a decade more.

UTAH CONSOLIDATED MINING & MILLING CO. UTAH

Idle. Office: 424 Atlas Blk., Salt Lake City, Utah. Mine office: Mammoth, Juab Co., Utah. Officers: S. S. Jones, pres.; H. S. Cutler, v. p.; Hart J. Fitzgerald, sec.-treas.; preceding with Hon. Reed Smoot, A. N. Holdaway and Hugh J. Cannon, directors, at last accounts.

Inc. March 10, 1907, in Utah. Cap., \$250,000; shares 25 cts. par; non-assessable. Shares listed on the Salt Lake and San Francisco exchanges.

Property: 6 claims, patented, near the Sioux Consolidated and Colorado mines, developed by a 500' shaft, with 2 levels opened. Part of the property is worked by lessees, who secure a small production.

The working capital March 31, 1916, was \$16,000,000.

The company controls the Nevada Consolidated Copper Co., owning slightly more than 50% of the outstanding stock, having exchanged its own stock on the basis of 1 share of Utah for 2¼ shares of Nevada. The company controls, through stock ownership, the Bingham & Garfield Railway Co., described later. During 1910 the Utah Co. absorbed the Boston Consolidated Mining Co. and the Shawmut Consolidated Copper Co.

History: in 1862 General P. E. Connor was stationed at Fort Douglas, Salt Lake City, in command of the Third California Infantry, a regiment of volunteers largely recruited from experienced California prospectors and miners. General Connor believed that the prosperity of Utah would be enhanced by immigration from the outside. He therefore encouraged exploration for minerals in the State and freely gave iurloughs to his miner soldiers, in order that they might do the necessary prospecting. As a result, mineral was discovered in Bingham Canyon early in the fall of 1863, and it is probable that it was not long after this date until the first prospecting was done in what is now called the "Bingham copper porphyry." This prospecting consisted of a tunnel, afterwards called "Soldier Tunnel," driven into the copper bearing porphyry for a distance of 200' on the westerly side of main Bingham Canyon, and on property now owned by the Utah Copper Co.

The mining property now embraced in the holdings of the Utah Copper Co. had been known to be copper-bearing for many years, but was supposed to be too low-grade to pay and was not taken up for active development until the organization of the original Utah Copper Co. in 1903. Previous to that time, any work done was in hunting for the rich copper ore that is found here and there in the seams of the rock and in the fissures and fault planes. In the spring of 1903, the Utah Copper Co. acquired a controlling interest in the property, and began the construction at Copperton of a 300-ton experimental concentrating mill. The work at the mine was commenced in November, 1903, and the mill began its operations in April, 1904.

The early development of the mine was designed along the lines of properly opening up the ground for the application of what is known as the "caving system of mining," and until June, 1907, all the ores extracted were derived from development work and by the application of that system. The underground mining operations at the Utah Mine were discontinued permanently September 18th, 1912, and those at the old Boston Consolidated on March 31st, 1914, so that now all the mining is being carried on by steam shovel operations.

Property: the Utah Copper Co. has the largest developed orebody in the world, its proven tonnage exceeding that of the Rio Tinto, its nearest copper competitor, and even exceeding the proven tonnage of the greatest of the enormous iron mines of the Mesaba range, or the developed tonnage of gold ore of all the combined mines of the Witwatersrand. Not only has the

Utah Copper Co. the largest body of developed ore of any mine, but it also is the greatest ore producer, measured by tonnage, of any mine of any metal.

The entire mineralized area of the property is covered by a thickness of about 115' of low-grade and oxidized material that cannot be profitably treated by standard methods of concentration. At the inception of development, information as to the comparative thickness of capping and ore was very meagre, but as the work progressed it was readily seen that a system of mining, much cheaper than by caving, could be applied, and it was determined to adopt the use of steam shovels and remove the oxidized overburden entirely, leaving the sulphide ore uncovered, so that it could also be handled by steam shovels at a very low cost. This character of work was commenced in August, 1906, and has since been prosecuted vigorously so that by the end of the year 1915, there had been removed from the property 33,795,410 cubic yards of capping and 42,548,023 dry tons of ore.

The maximum quantity of capping and ore ever handled in one day was 70,243 tons, and the maximum ever handled in any one month was 1,998,116 tons. The ore production from the property of the Utah Copper Co. has increased from 300 tons a day in July, 1904, to an average of over 26,000 tons daily, during the last half of 1915.

Geology: orebodies consist of an altered silicious porphyry, containing small grains of copper minerals, very uniformly disseminated throughout the mass, both in fracture seams and in the body of the rock, and averaging about 1.45% copper, 0.12 oz. silver and 0.014 oz. gold. The primary copper mineral is chalcopyrite, but as a result of the oxidization of this mineral and the secondary deposition of others, practically all of the sulphide minerals of copper are now present, the predominating one being chalcocite. There are three zones in this deposit, as follows: the oxidized zone, about one-third of which contains carbonates of copper in sufficient quantity to render the material payable by leaching with a dilute solution of sulphuric acid; second, the zone of secondary enrichment, in which is found all of the concentrating sulphide ore of commercial value; and third, the zone of primary material, which is too low-grade to be profitable by any method of handling and treatment at present known.

Acreage: total area of lode mining claims in Bingham is 741.69 acres, of which 11.73 acres are outlying fractional claims and 729.96 acres is the group of adjacent claims lying on both sides of Bingham Canyon above the town, and where the mine is located, and within the boundaries of which development has shown that at least 226 acres contain mineralized porphyry of commercial value. The entire porphyry area has not yet been developed; and the maximum thickness of the orebody in the 226 acres has not been fully demonstrated, but calculations show that previous to January 1st, 1916, there had been developed in the property 390,000,000 tons of ore, averaging 1.447% copper, of which quantity 270,000,000 tons were classed as fully developed, and 120,000,000 tons as partially developed. There was mined from the entire property prior to Jan. 1, 1916, a total of 43,684,700 tons of ore averaging 1.453% copper; total reserves remaining, 346,315,300 tons, averaging 1.446% copper.

Development: in making the calculations to determine the tonnage of ore and its average assay, there were used 56,714 assays, representing 26,870' of diamond drill and churn drill holes, 291,018' of drifts, raises and winzes, and 16,630 linear feet of steam shovel cuts, or a total of 334,518' of development work. The orebody, as at present developed, has a maximum length of a little over one mile, and a maximum width of more than one-half mile. Further development of the property will add materially to its ore reserves.

The total area of land other than lode claims owned by the company is 6,662.3 acres, consisting of 1,201.87 acres near the mouth of Bingham Canyon, part of which was formerly used in connection with the operation of the Copperton Plant, 684.52 acres in Utah and Davis counties and 4,775.91 acres at the Magna and Arthur plants. Of this last acreage, approximately 2,340 acres are now included within the area upon which the tailings are being impounded.

The porphyry deposit on the westerly side of the canyon is being worked by steam shovels. There are 24 steam shovel levels from "A" to "W" inclusive, the levels being named alphabetically, beginning with "A" at the elevation of the railroad tracks in the bottom of the canyon and extending to "W" level near the top of the mountain; also one level below "A," called Sub "A." Each of these levels is connected with the bottom or main level, with standard gauge railroad tracks constructed on 4% grades, so that the steam shovels load the ore directly into railroad cars which are hauled by 50-ton saddle tank engines to the main yard and assembled into trains to be transported to the mills. From Sub "A" to "W" level, the difference in elevation is 1,506', and from Sub "A" level to the top of the mountain, it is 1,600'. The high face of ore extending from "A" to "F" level, across which intermediate levels have been cut out, has a vertical height of about 240'. From "F" level to "W" level, the difference in elevation between the levels varies from about 68' to 100', depending upon certain topographical conditions which control the elevations of the stripping lines extending from the steam shovel levels to the waste dumps.

No work has yet been done on the easterly side of the canyon, except development by drifts, raises, cross-cuts and churn drill holes, with a small amount of underground stoping.

Equipment: at the mine at the end of 1915, included 38 standard-gauge switching locomotives, 11 narrow-gauge switching locomotives, 1 standard-gauge Shay locomotive, all operated by steam; 16 Marion, 2 Bucyrus and 2 Atlantic type of standard-gauge steam shovels, 1 combination steam shovel and locomotive crane, 110 standard-gauge 12-yd. all-steel dump cars, 117 standard-gauge 6-yd. wooden dump cars, 144 narrow-gauge 4-yd. wooden dump cars, 50 standard-gauge 30-yd. all-steel side dump cars, 4 standard-gauge flat cars, 100,000 lbs. capacity, 1 engine tender, 4 Star drills, 7 Keystone drills, and 6 air compressors having a combined capacity of 8,000 cubic feet of free air per minute.

The problem is to remove the stripping from the ore and carry it to adjacent gulches to waste, and load the ore into railroad cars to be transported to the mills. The rock is broken by blasting before removal by the steam shovels, holes being bored by churn drills operated by steam, and piston drills operated by air. The holes are sprung and prepared ahead of the steam shovel operations, and are loaded and shot at such times as are required by the individual shovels on the different levels. An average of 1 pound of powder has been required to break down about 5 tons of rock ready for the steam shovel to load. There are 44.79 miles of standard-gauge track in and around the mines, 4.48 miles of narrow-gauge and 2.98 of three-rail track, a total of 52.25 miles, all owned by the Bingham & Garfield Railway Co.

The shovels and locomotives at the mine are operated by steam, but extensive use is made of electric power received from the Utah Power & Light Co. Buildings at the mine include machine and carpenter shops, car repair shops, compressor buildings, storehouses, office buildings, club house, boarding houses and other minor structures.

The Mills: company has had three mills, one at Bingham Canyon, now

dismantled, and two at Garfield, 20 miles from the mine. The 900-ton Coperton mill at Bingham Canyon, the first concentrator put up by the company, is fully described in volume VIII, Copper Handbook. It was closed permanently August 1st, 1910, and all machinery that was suitable was sent to the Arthur mill for remodeling that mill.

The finely disseminated copper glance necessitates fine crushing with the formation of slimes and a tailing loss of about .5% copper. Concentration is about 23 into 1.

The **Magna** mill, the first mill built at Garfield, stands on a 3,000-acre site 4 miles E. of the Garfield smelter and 1 mile E. of the Arthur mill. It is connected with mine and smelters by the Bingham and Garfield, Denver and Rio Grande, and San Pedro, Los Angeles and Salt Lake railways. The building is 505'x600' and contains two 3,000 ton units, each of 6 sections, each unit being 300'x505' in size, occupying a site of about 20 acres. The plant is so designed that 2 additional units of the same size can be added when desired. Milling was begun June, 1907, with 2 sections, and the 12th and final section of the mill was started in November, 1908. The ore bins of the Magna mill are of 25,000 tons aggregate capacity, with bins of 12,000 tons in the coarse crushing department and 13,000 tons in the fine crushing department.

The Magna mill handles 12,000 tons daily, and is divided, longitudinally, into 3 departments, for coarse crushing, fine crushing and concentrating.

The coarse crushing department consists of 2 sections having a capacity of 8,000 tons each in 24 hours. Each coarse crushing section is equipped with 2 No. 7½ gyratory crushers, 4 sets of 54"x20" Garfield roughing rolls, 4 elevators, 12 conveyors, 60 steel apron ore feeders, 7 motors and one 25-ton, 3-way, motor crane. In this department the ore is crushed dry to approximately ¾" in size.

The fine crushing department contains 36-6' Garfield Chilean mills, 24 sets of 37½"x15" Garfield rolls, 24 steel apron ore feeders, 24 elevators, 72-3'x4' impact screens, 12 motors, and one 15-ton, 3-way motor crane. In this department the ore is crushed dry to about 10 mesh of rolls, and wet to about 40 mesh by Chilean mills.

The concentrating department for the entire plant is built on 3 floors, and contains 22 roughing and 44 finishing No. 5 Wilfley tables, 122 Garfield roughing tables, 1104-6' vanners of suspended type, 83 Richards-Janney classifiers, 240-9' and 148-7' 60° conical settling tanks.

Miscellaneous buildings at the Magna plant consist of machine shop, thoroughly equipped for all repairs, boiler and blacksmith shop, warehouse, transformer house, pumping stations, ice house, carpenter shop, rigger shed, main office, and dormitory.

The reserve pumping plant No. 1, used in whole or in part when the main pumping plant No. 2 is out of primary water, is situated 1500' N. E. of the Magna mill, and includes a Nordberg triple-expansion condensing pump with capacity of 10,000 gal. of water per min.; 3 two-stage Jeanesville centrifugal pumps and 3 two-stage D'Olier centrifugal pumps driven by 450 h. p., 350 h. p., and 250 h. p. G. E. induction motors, and having capacities of 4,500, 3,500 and 2,500 gals. per min. respectively. These pumps, with a combined capacity of 31,000 gals. per min., pump through two 24" wooden stave pipe lines, each 1800' in length, against a 230' head into a 5,500,000 gal. concrete lined reservoir above the Magna mill. In addition to the above are three 3-stage Byron Jackson centrifugal pumps driven by 400 h. p. G. E. and two 250 h. p. Westinghouse induction motors, and having capacities of 3,000, 1,500 and 1,500 gals. per min. respectively, which pump through one line of pipe, 1,700' of which is 20", and 5,870' of 30"

wooden stave pipe line direct to a 2,000,000 gal. concrete lined reservoir above the Arthur mill, elevating the water 330'. The total combined capacity of this plant is 37,000 gals. per min.

The sources of supply for this station are springs at the plant developing 15,000 gals. per min. and through a canal which returns the water from the tailings pond, where both tailings and drainage water are impounded over an area of 1,000 acres. In time of low water, when the pond elevation is not sufficient so that the water will flow to the pumping station, it is lifted a maximum of 10' from the pond into the return canal by a 24" 20,000 gals. per min. Byron Jackson centrifugal pump, driven by a 60 h. p. G. E. induction motor.

The main pumping plant, called plant No. 2, is situated immediately east of the Magna Mill, and at the end of the Utah & Salt Lake Canal, which brings the water from Utah Lake, about 40 miles from the plant, and through which, at certain seasons of the year when the farms in Salt Lake county do not require water for irrigation purposes, all of the primary water for both the Magna and Arthur plants is received. The equipment in this plant consists of 2 single stage 10,000 gals. p. m. Worthington centrifugal pumps, each driven by a 150 h. p. G. E. induction motor, and one single-stage 5,000 gals. p. m. Worthington centrifugal pump, driven by a 75 h. p. Westinghouse induction motor, all 3 of which pump direct into the Magna 5,500,000 gals. reservoir through 700' of 30" wooden stave pipe line, against a 24' head; and 3 single-stage 5,000 gals. p. m. Worthington centrifugal pumps, each driven by 200 h. p. G. E. induction motor, 1 single-stage 3,000 gal. Byron Jackson centrifugal pump, driven by a 150 h. p. Westinghouse induction motor, all pumping direct to the Arthur mill 2,000,000 gal. reservoir through 6,300' of 30" wooden stave pipe line, against a static head of 120'. The total capacity of this plant to the Magna mill is 25,000 gals p. m., and to the Arthur mill, 18,000 gals. p. m., which is 70% more than is required by either plant.

The Arthur mill, about one mile west of the Magna mill, was built by the Boston Consolidated Mining Co., at a cost of upwards of \$1,500,000. It was remodeled to a capacity of 8,000 tons of ore daily by replacing the Nissen stamps with rolls and Chilean mills to correspond to the practice at the Magna mill and has 13 operating sections. The ore bins at Arthur have a capacity of 21,500 tons, 9,000 in the coarse crushing department and 12,500 tons capacity in the fine crushing department.

The coarse crushing department is in a separate building adjoining the coarse ore bins and is equipped with 3 No. 8 gyratory crushers, 4 sets of 72"x20" Garfield roughing rolls, 4 elevators, 14 conveyors, 102 steel apron ore feeders, 10 motors and one 25-ton, 3-way motor crane. This department has a capacity of 15,000 tons in 24 hours and the ore is crushed dry to approximately $\frac{3}{4}$ " in size.

The fine crushing department contains 26-6' Garfield Chilean mills, 26 sets of 37- $\frac{1}{2}$ "x15" rolls, 78-3'x4' impact screens, 26 steel apron ore feeders, 26 elevators, 26 motors and two 15-ton, 3-way motor cranes. In this department the ore is crushed dry to approximately 10 mesh by rolls and wet to approximately 40 mesh by Chilean mills.

In the concentrating department there are fifty-two 4-compartment, fifty-four 5-compartment and thirty-nine 3-compartment Richards-Janney classifiers, 156 Garfield roughing tables, 26 roughing and 34 finishing No. 5 Wilfley tables, 840-6' vanners, 14 elevators, 312-9' and 52-7', 60", conical settling tanks and 14 motors.

Miscellaneous buildings at the Arthur plant consist of sub-station, machine shop, boiler shop, oil house, compressor building, warehouse, car-

penter shop, foundry, pattern storage building, general office, telephone building and emergency hospital, dormitory, mess house, lumber shed, heating plant, assay office, time office, and scale house.

Electric power used at both the Arthur and Magna plants is taken from the Utah Power & Light Co.

The 13,000 h. p. steam-electric plant, 1,500' N. E. of the Magna mill was erected by the Minneapolis Steel & Machinery Co. The boiler plant has 20 Heine 419 h. p. water tube boilers, working under 175 lbs. steam pressure, equipped with American automatic stokers, having separate mechanical drives, of special design. There are two 26x50x48" Allis-Chalmers cross-compound Corliss condensing engines direct connected to 1,500 k. w. A. C. generators, and three 32x70x48" Nordberg cross-compound Corliss condensing engines direct connected to three 2,250 k. w. A. C. generators. There are 2 concrete smokestacks, 180' high, 12' inside diam. at the top. This plant has not been in operation since Feb., 1914.

The Utah Copper company employs 1,640 men at the mines, and 1,650 at the mills and shops at Garfield.

Bingham & Garfield Railway

Inc. July, 1908, in Utah. Cap. of \$6,000,000; shares \$100 par. Controlled by the Utah Copper Co., through ownership of the entire share capital. There is a \$2,500,000 issue of 10-year 6% bonds, convertible into stock of the Utah Copper Co. at \$50 per share, at any time after July 1st, 1914, of which \$2,498,500 had been retired up to December 31st, 1915, through sinking fund.

The main line from Garfield to the mines, including tracks to the smelter, Sand Spur, and the Carr Fork extension to the Apex Yard, is 26.28 miles. Yard and side tracks along the main line aggregate 21.80 miles. This together with tracks in and around the mine, and tracks not owned but operated over, makes 107.1 miles of track. The average grade for the entire line is about 2%; the maximum grade is 2.5%, with curves compensated .04 of a foot per degree of curvature. There are 4 tunnels with an aggregate length of 4,821', all driven 18' wide and 22' high; the longest being 2,085.1'. There are 3 steel viaducts with an aggregate length of 2,010', containing about 3,000 tons of steel; the longest, across Carr Fork, being 690' long and 190' high. Equipment of the line includes 4 Mallet articulated compound locomotives, each weighing 228.5 tons; 14 switching locomotives; 400 hopper-bottom steel ore cars; 50 drop-bottom side-dump steel general service gondola cars; 99 steel concentrate cars, making a total of 549 cars, each of 60-ton nominal capacity, with 10% excess allowance for overload; 6 steel flat cars of 50-ton capacity; 4 steel frame powder cars of 50-ton capacity; 3 wooden flat cars of 25-ton capacity; 4 caboose cars; 1 Jordan spreader; 1 scale-testing car; 2 business cars; 2 passenger coaches and 1-120-ton wrecking crane. There are now being built 100 additional hopper-bottom steel ore cars and 25 additional steel concentrate cars, all of which are of 60-ton capacity, with 10% excess allowance for overload.

The cost of the complete line was upwards of \$5,000,000. The first train load of ore, about 2,600 tons, was taken down the main line on September 14th, 1911, and regular passenger and freight service was started the following morning.

Dec.		14,497,485	6,795,567	10,762,490

Increase of ore reserves for 1915 was 3,815,300 tons in excess of tonnage mined. Much additional ore can and will be developed.

Total amount of capping removed was 5,961,367 cu. yds. The total area upon which stripping operations has been conducted was 203 acres and the actual area stripped was 96.8 acres.

Practically all ore produced was mined by steam shovel at average mining cost of 24.4c per ton, of which 7.5c represents charges for stripping and .3c charges for development, leaving actual working cost, including proper proportion of all fixed and general charges, 16.61c per ton as compared with 22.62c per ton in 1914.

The directors have authorized construction of a leaching plant to treat the oxidized material, estimated at 40,000,000 tons. It is the intention to build this plant with an initial capacity of from 2,000 to 3,000 tons per day. For the purpose of furnishing acid for this plant, the company will participate equally with the Garfield Smelting Co. in financing construction and operation of an acid works near the smelter.

In June, 1916, the directors set aside \$2,500,000 and ordered the enlargement of the mills.

Improvements under way promise not only a continuation of production increases but further reductions in costs.

Utah Copper is still the brightest star in the Hayden-Stone-Jackling galaxy, and its aggressive and brilliantly competent management promise to keep the company in its present enviable position.

UTAH & EASTERN COPPER CO.

UTAH

Office: 127 Church St., New Haven, Conn. Operating office: 508 McCormick Bldg., Salt Lake City, Utah. Mine office: Dixie, Washington Co., Utah. Works office: Shem, Washington Co., Utah. Officers: Louis E. Stoddard, pres.; T. W. Farnam, sec.-treas.

Inc. 1901, in West Virginia. Cap., \$1,500,000, increased later to \$3,500,000; shares \$5 par, in \$2,000,000 preferred and \$1,500,000 common stock.

Property: 11 claims, patented, 220 acres, and a 40-acre smelter site, including the old Dixie mine, in the Tutsagubet or Cave Springs district, near Green river, showing 5 replacement deposits in limestone, 1 of 40'

estimated average width, carrying cuprite, azurite and massive malachite ores, said to give average assays of 15% copper. **Development:** by a 775' blind shaft, sunk from the breast of a 225' tunnel. This tunnel caved, 1905, and it was necessary to run a new tunnel, of 800', to reopen the mine. Old workings said to show about 100,000 tons of ore. **Equipment:** includes a small gasoline plant.

The company has 2 smelters, 1 worthless; the new smelter has a 100-ton water-jacket blast furnace, with water power, secured from the Santa Clara river, 2 miles distant, and a small auxiliary steam plant. The smelter is at Shem, about 50 miles from Acoma, on the Rio Grande Western railroad, the nearest shipping point, and transportation for 14 miles of the distance is by traction engine.

Production: 1,448,597 lbs. copper in 1904, 400,166 in 1905, and 391,779 lbs. in 1907. Property considered promising but is handicapped by lack of rail transportation. Worked by lessees, 1915, who shipped several cars of 30% ore.

UTAH LEAD & COPPER CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah. **Mine office:** Bingham Canyon, Utah. **Officers:** Carl Brandt, pres.; Harry M. Stonemetz, v. p.; J. P. McDough, sec., all of Boston. W. D. Bohm, manager.

Inc. Dec. 24, 1912, in Maine, as the successor of the Bingham Copper Co. **Cap.**, \$500,000; shares \$1 par. Debentures \$100,000, at 6%, convertible bonds; outstanding \$31,750. Federal Trust Co., Boston, transfer agent; Paul Revere Trust Co., registrar.

Property: 11 claims, patented, about 102 acres, on the eastern slope of Carr Fork Canyon. Company also owns a one-quarter interest in the Diamond Extension and a one-half interest in the Diamond claims adjoining.

The property shows 3 fissure veins, several bedded deposits of silver-lead ore and a fissure vein of copper ore of less promise. A big outcrop near the W. end line is said to have yielded considerable high-grade gold and silver ore with lead carbonates, to former owner.

Development: by 2 tunnels, longest 1,200', and 2 shafts on the Venice claim. There are about 3,000' of workings, showing ore below commercial tenor generally but with occasional streaks of ore assaying up to 70% lead and 15 to 30 oz. si' er. **F lipment:** includes a small air compressor.

Property has been idle for some time, but was planning to reopen. Aug., 1916.

UTAH LEASING CO.

UTAH

Newhouse, Utah. **Officers:** John H. Leavell, pres.; J. C. Dick, v. p.; D. R. Pingree, sec. treas., with F. W. Royer and Vivian P. Strange, directors. H. H. Adams, supt.

Company completed a 500-ton plant at Newhouse in 1915 to treat 1,000,000 tons of tailing from the old Cactus mine. The plant uses a Mineral Separation machine; other equipment includes two 8' x 48" Hardinge mills, and 2 Dorr classifiers.

Electric power is obtained from the Beaver River Power Co. at 44,000 volts, stepped down to 2,200 and 4,400 volts. Claims that an extraction of 80 to 85% is practicable.

UTAH METAL AND TUNNEL CO.

UTAH

Office: McCornick Bldg., Salt Lake City, Utah. **Officers:** Jas. E. Rothwell, v. p.; W. E. L. Dillaway, sec.-treas., 45 Milk St., Boston, Mass.; Walter B. Farmer, L. E. Stoddard, A. B. Martin, directors. Chas. H. Doolittle, mgr.

Inc. May 5, 1914, in Maine. **Cap.**, \$725,000; \$1 par, increased from \$500,000; Nov., 1914, to purchase Bingham-New Haven C. & G. Mng. Co.;

677,717 shares issued. **Debentures:** \$375,000 (\$129,250 retired 1916), due April 1, 1919. Commonwealth Trust Co., Boston, transfer agt. State St. Trust Co., Boston, registrar. Company acquired 214,589 shares out of 228,689 issued shares, Bingham-New Haven C. & G. Mng. Co., by exchange of share for share. Latter company has been paying dividends since 1906, with \$285,861 paid in 1915, and a total of \$960,493. Utah Metal has never paid dividends. Listed on Boston Curb; traded in on New York Curb. Stock sold at \$1 to \$10.50 in 1915.

Income of Utah Metal from Sept. 25, 1914, to Dec. 31, 1915, was \$383,637 and net profit carried to surplus, \$180,465. The two companies earned \$510,094 in 1915, excluding 5%, or \$69,200 set off for depreciation. For first quarter of 1916, the combined gross income of both companies was \$678,172 for ore and \$11,944 for water, and combined net earnings were \$367,527. Company purchased \$129,250 of its bonds, and had cash on hand and due for ore sold, \$961,827.

In first 6 months of 1916 net earnings were over \$600,000.

Company is a reorganization of the Utah Metal Mining Co., itself a consolidation of the Bingham Central, Bingham Standard and Bingham Metal Mining Co.

Property: is extensive, covering 3,539 acres, including 139 acres timber land, in Bingham district, adjoining holdings of Utah Cons. and Utah Copper Co. (Boston Con.) and extending across the range to Middle Canyon, on the Tooele side. The company's active asset is a transportation and drainage tunnel, cut 11,500' through and 2,300' below the crest of the range, from near Tooele to Bingham Canyon (Carr Fork). This gives direct short transportation to Tooele and Garfield and develops a large flow—600,000 gals. per day—of water sold to the Garfield mill of the Utah Copper Co.

The Bingham or Carr Fork holdings include the Bingham Central & Bingham Standard groups, an area in which the various mineral bearing limestone beds of the camp are cut by the Saginaw-Burning Moscow and Nast veins, and crossed by the Old Jordan fault. The claims on the Tooele side show similar limestones, cut by fissures, but the development work there has not thus far shown commercial orebodies, as it has on the Bingham side.

In Nov., 1914, the company started crosscut exploration from the big drainage tunnel at 8,200' from the Tooele portal. In March, 1915, 1,300' from the Bingham portal, the latter work encountered mineralized ground, and on upraising 70', an orebody 25' thick was cut. Drifting disclosed a second orebody E. of and above the first, and later a third orebody, already opened and mined by the Bingham New Haven Co., was cut. At present there are five productive orebodies on the combined properties. One copper ore shoot 300' below the B. N. H. tunnel has been proven for over 200'.

By purchasing control of the Bingham New Haven company, the two properties can be developed together, each mining its own ground from tunnel on the other's claims. It also gives the Utah Metal much needed tramway facilities saving 60c per ton on ore shipments, and the use of the B. N. H. mill. The Bingham New Haven property is described under its own title, although the company is now a subsidiary of Utah Metal.

Development: on Utah Metal includes besides the 11,490' transportation and drainage tunnel, and the workings therefrom, extensive tunnel development on the Bingham Central and Standard group, embracing the 700' Saginaw, 2,000' Whiteley, 2,000' Jeff Davis, 400' Deem, 950 Mtn. Maid, the Amelia and lesser tunnels, all showing ore at various points. On the Tooele side, the Middle Canyon group has one 5,000' tunnel, another 1,700' and a third 500' long.

The transportation tunnel is 8'x9' in the clear, double tracked, with a half % grade. It develops the mineral bearing limestone and veins at depths of 375 to 900' below any other workings.

Production: in 1915—	Gold Oz.	Silver Oz.	Lead Lbs.	Copper Lbs.
Utah Metal (7 mo.).....	10,297	150,446	4,956,183	299,554
B. N. H. (12 mo.).....	6,617	325,448	4,903,906	2,574,261

U. M. received 13.12 and B. N. H. 16.505c per lb. for copper, and U. M. 3.49c per lb. for lead, compared with 3.957c received by B. N. H. U. M. ore averaged \$18.242 per ton and B. N. H. \$11.975 per ton.

In January, 1916, B. N. H. produced 704,155 lbs. lead and 348,096 lbs. copper, at an estimated profit of \$103,824. The U. M. made a profit of about \$45,000, a cave-in at the copper stope having curtailed production for the month.

Company now has ample surplus for working capital, good mine equipment, a mill handling 225 tons ore daily, and should with proper development be able to pay dividends for some years to come.

UTAH MINERALS CONCENTRATION CO.

UTAH

H. Atkinson, mgr., Eureka, Juab Co., Utah. A. W. Parshall, supt. Owns 250-ton custom concentrating mill for local ores. Recently has milled tungsten ores.

UTAH MINING, MILLING & TRANSPORTATION CO.

UTAH

Moscow, via Milford, Beaver Co., Utah. Chas. T. Birchard, pres. and gen. mgr., at last accounts. Lands: include the Hub and Lady Bryan mines, latter bought 1909, of Mathew Cullen et al., S. of the Burning Moscow, 6 miles from a railway, in the Star district.

Development: by a 400' two-compartment main shaft, developing a vein variously reported as 2 to 30' in width, carrying silver-lead carbonates, and a bedded deposit in limestone showing high-grade cuprite, from which small shipments of ore have been made. Ore said to carry \$6-\$7 in silver and gold with heavy percentage of iron. Reported ready to begin operations at end of 1915.

UTAH-MISSOURI MINES CO.

MISSOURI

Neck City, near Joplin Mo., is operating the Ball and Colony mines, the former showing rich lead-zinc ore at 185 to 200 feet depth in diamond drill holes. The Colony is an old mine already developed by a shaft. Company is putting up mills on each tract.

UTAH ORE SAMPLING CO.

UTAH

Office: Provo, Utah. **Officers:** Jesse Knight, pres.; E. P. Ellison, v.-p.; Arthur Stallings, sec.; A. W. Gates, gen. mgr.; preceding with W. L. Mangum and J. W. Knight, directors; W. E. Evans, supt. at Murray; F. Burgner, supt. at Silver City; M. A. Snow, supt. at Park City, Utah. Cap. \$200,000.

Company owns and operates ore-sampling mills at Murray, Park City, Silver City and Sandy, with combined capacity of about 500,000 tons of ore annually.

UTAH-RELIANCE MINING CO.

UTAH

Office: 408 South State St., Salt Lake City, Utah. **Mine office:** Ibapah. Tooele Co., Utah. **Officers:** J. G. Bywater, pres.; D. B. Tripp, v.-p.; Richard B. Shepard, sec.-treas. and gen. mgr.; preceding with W. A. Langford and Samuel Divett, directors.

Inc. 1908 in Utah. **Cap.**, \$5,000; shares 1 ct. par; assessable; issued, \$3,000, fully paid.

Property: 8 claims, unpatented, 160 acres, about 45 miles from a railway, showing porphyry and limestone. **Development:** by a 175' tunnel and a 100' shaft, latter showing ore assaying up to 16% copper, 4 oz. silver and 40 cts. gold per ton.

UTAH-UNITED COPPER CO.**UTAH**

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah. **Officers:** A. J. McMullen, pres.-gen. mgr.; Chas. A. Weaver, sec.-treas.; preceding with Arthur B. Gattrell and Jas. E. Edmunds, directors. D. P. Rohlfing, engr.

Inc. 1908 in Utah, as a merger of the Wasatch M. & M. Co. and Skylark Copper M. & M. Co. **Cap.**, \$600,000; shares 1c par; assessable; issued \$75,000, with \$30,909 assessments levied to March, 1913. Annual meeting, second Monday in October.

Property: 14 claims, 2 patented, a 10-acre mill site and a patented water right, including the Skylark and O. K. groups, in the Beaver Lake district, 6 miles from a railway and 12 miles W. of Milford. Claims show limestone, monzonite and granite cut by fissure veins and carrying contact deposits between monzonite and limestone. **Development:** one vein reported to average 20' in width, is opened by 5 shafts, deepest 470', and by several tunnels, longest 250'. The ore is reported to average 2% copper and to carry small silver, gold and lead values. The ore minerals include cuprite, melanconite and azurite together with chalcopyrite and marcasite in a ferruginous gangue. Drifting on 470' level is reported to have disclosed some high-grade copper ore, 1915.

Equipment: includes 25-h. p. hoist, compressor and 3 buildings.

UTAH-YERINGTON MINING CO.**NEVADA**

Provo, Utah. John Roundy, pres.; C. W. Reese, v.-p.; Heber C. Jex, sec.-treas.; A. G. Gutheil and Jos. Wirthlin, directors.

Inc. 1907 in Utah. **Cap.**, \$100,000; shares 10 cts. par; assessable.

Property: 14 claims, 3 patented, lying E. of the Mason Valley mine, and next to the Butte-Yerington Copper Co. are said to show copper, silver, lead ore. Expected to operate property in 1916.

UTICA GOLD MINING CO.**CALIFORNIA**

Office: care of Hobart & Lane Estates, Merchants Ex. Bldg., San Francisco, Cal. Fred J. Martin, supt., Angels Camp, Calaveras Co., Cal.

Property: 9 claims, covering Dead horse lead, a N. W.-S. E. vein dipping 70° N. E. Vein has ore 60' thick, averaging \$3.60 per ton. Also Gold Cliff mine on westerly split of the main Mother Lode.

Geology: the Gold Cliff and Utica veins are about 3,000' apart on the surface, converging somewhat in their southern trend, and also in depth. Development tends to show that within a short distance from the bottom of the present workings, these two veins will unite as one large one. On the 2,750' level the pitch of the Utica vein, at or near the surface, is 60° to the east, while at the 2,400' level it has a pitch of 70°. The Gold Cliff, on the other hand, at or near the surface, has a pitch of 55° to the east, and at the 1,900' level has changed to 40°. The present lower workings of the Utica show the vein at that point to be about vertical.

Development: on the Utica vein to depth of 2,400' by vertical shafts; the 1,470' cross shaft being main working with 700' winze below 1,400' level and a 1,600' connection on 1,500' level, to 2,400' level of Gold Cliff shaft.

Equipment: includes the Utica 60-stamp mill, 20 stamps operating on Utica ore proper, with 85% extraction and the 40-stamp Gold Crown mill making a 90% extraction. Total costs, \$2.15 per ton.

See Calif. State Mining Bureau report 1913-14, Mines & Min. Res. of Calaveras Co., pp. 81 and 110.

A new strike on the 1,600' level made in June disclosed 18" to 20" of bonanza, or specimen ore, showing coarse free gold, the vein averaging \$1,200 per ton. New work on the 1,800' level is expected to disclose the downward extension.

UTICA MINES CO.**BRITISH COLUMBIA**

Office: C. F. Caldwell, Kaslo, B. C. **Officers:** G. H. Aylard, pres.; C. F. Caldwell, v.-p., with J. D. Chalin, W. M. Archibald, W. D. Miller, G. Hartin, C. B. White, mgr., directors.

Property: silver, lead, zinc holdings in Slocan district, B. C. Operating

profits, 1915, \$14,796. Quick assets, March 31, 1916, \$21,533. Shipping 50 to 100 tons lead and zinc concentrates monthly. Claimed March 31, 1916, there was enough ore in sight to maintain the output for at least another year.

UTOPIA MINING & MILLING CO.**WYOMING**

Centennial, Albany Co., Wyo. Lee Van Voorhis, pres.; Jas. McCune, v.-p.; P. L. Holtum, sec.; P. H. Milburn, treas.; Bernard Holtum, gen. mgr. Inc. 1898 in Wyoming. Cap., \$1,000,000; shares \$1 par; nonassessable; issued, \$875,000. Annual meeting, third Tuesday in August.

Lands: 2 claims, 30 acres, unpatented, in the Centennial district. The property shows 2 contact veins between diorite and schist, of which 1 averaging 6' in width, is reported to have given assays of 3% copper, 4 to 20% zinc, up to 63 oz. silver and \$44 gold per ton. Ore minerals are mainly chalcopyrite, sphalerite, and pyrites.

Development: by tunnels of 250', 600', 175', 300', and 1,200', with about 2,600' of workings, all in ore.

Equipment: includes a small electrical installation, with electric drill, and 6 buildings. Reopened in 1913; nothing heard from it since.

UVADA COPPER CO.**NEVADA AND UTAH**

M. M. Johnson, mgr., Pioche, Lincoln Co., Nev. Inc. 1915 (by F. C. Richmond, pres., Richmond Machinery Co., 117 W. Second St., Salt Lake City, Utah) to take over property of the Day Bristol Cons. Mines Co. Company is the operating company of the International & Intercontinental Mng. & Ref. Co., which see.

Initial dividend of 1c a share paid, Sept., 1916.

Property: 15 miles west of Pioche, includes the May Day, Hillside, Tempest, Gypsy, Vesuvius, National, Inman, Tempest, Oregon Short Line, Iron and Day mines. The Day mine comprises 5 claims on the opposite side of the mountain and was needed in order to drive a tunnel through the mountain, giving direct access to the railroad.

Ore is a mixed sulphide carrying silver, lead, copper and some zinc, occurring in limestone cut by fissures.

Development: by 2 old shafts, the 700' Gypsy and 500' May Day, both out of commission in 1915. A shaft, being put in condition, July, 1916, will be the main working shaft and will be connected with the 500' level. Old workings exceed 10,000'. In 1916, new work included mining ore on the 300', 350' and 450' levels and sinking a winze from 500' to 630' level. A 9,000' tram carries ore from mine to railway.

In May, 1916, the Day Bristol was shipping about 25 tons of lead and copper ore daily to the Garfield smelters. June production was 29 cars, about 1,160 tons.

Company also owns the Montana group of claims in the Tintic mining district, Utah.

UVADA TUNGSTEN CO.**NEVADA**

Care A. V. Taylor, Dooly Block, Salt Lake City, Utah. Is reported to have taken over the Pilot Knob group near Osceola, Nevada. (See Pilot Knob.)

Property: 5 claims, Pilot Knob group, 2½ miles south of Osceola, Nevada, shows quartz veins in limestone, overlying quartzite, underlain by granite. Ore carries tungsten.

VALDEZ GOLD CO.**ALASKA**

Formerly known as the Cameron-Johnson Gold Mining Co., which see.

VALENZUELA COPPER MINING CO.**ARIZONA**

Dead. R. I. P. Mine near Benson, Ariz. See Vol. XI, Copper Handbook.

VALLEY FORGE MINING CO.**MONTANA**

O. F. Newkirk, Rimini, Mont., sec. Operates gold, silver, lead, zinc property in Ten-Mile district, 14 miles W. of Helena. Developed for several years and in January, 1915, shipped ore at a profit of \$4,000. Erection of concentration plant in 1916 to treat 25,000 tons low grade dump ore is planned.

VAN ANDA COPPER & GOLD MINES CO., LTD.**BRITISH COLUMBIA**

Inactive. H. W. Treat, gen. mgr. and L. Goodacre, trustees; Jas. Raper, agt., Van Anda, B. C. Company presumably still alive but not operating.

Property: 20 claims, crown granted, 840 acres, including the Copper Queen and formerly the Cornell mines has been bonded from time to time to various operators who have held it for short periods. Property was under option to the Granby Cons. M. & S. Co., Ltd., in 1914, but option not exercised.

The Cornell mine has lenses of rich ore, mainly bornite, with some chalcopyrite along a diorite limestone contact. The deposit has one main ore-shoot, 150' long and 30' wide and two lesser shoots. No commercial ore has been found below the 360' level, though extensive drifting was done on the 460' level. The Copper Queen ores are similar in character and occurrence. See Texada Id., B. C., by R. G. McConnell, Geol. Survey Canada Memoir 58, 1914, pp. 56-64.

The Copper Queen shaft is 600' deep with a winze 240' deep on the 500' level.

VAN DYKE COPPER CO.**ARIZONA**

Miami, Ariz. **Care:** Hoval A. Smith, gen. mgr.; Cleve W. Van Dyke, pres. Inc. August, 1916, in Ariz. **Property:** 8 claims lying south of and adjacent to the Inspiration and Miami properties at Miami, Ariz.

VAN ROI MINING CO.**BRITISH COLUMBIA**

Controlled by Le Roi No. 2, Ltd., Rossland.

Office: F. A. Labouchere, sec., 535 Salisbury House, London, E. C., Eng., formerly a large producer of silver, lead, zinc concentrates, in Slocan district, B. C., but ceased operations 1914. Stock owned in England.

VANADIUM COMPANY OF AMERICA

See American Vanadium Co.

Control of company bought Aug., 1916, by Kuehn Loeb & Co., New York, the Cassatt Co. of Philadelphia, J. Leonard Replogle, Chandler Bros. & Co., and Harrison Williams. The reorganized corporation will have a capital of \$13,500,000 instead of \$700,000 of the old company; \$5,000,000 will be preferred, \$6,000,000 common and \$2,500,000 6% short term notes will be issued. Old stockholders receive \$1,000 a share, \$650 in new stock and \$350 in notes. The old stock is said to have cost \$200 a short time ago, the reorganization being one of the juiciest melons Wall Street has ever known.

VANCOUVER ISLAND MG. & DEV. CO., LTD. BRITISH COLUMBIA

Presumably dead.

Company has done no mining or prospecting in several years, and, at last accounts, was engaged in lumbering. Former mine holdings described Vol. XI, Copper Handbook.

VANGUARD GOLD-COPPER CO.**OREGON**

Mine near Kerby, Josephine Co., Ore. C. E. Phillips, mgr. Inc. 1910. **Cap.**, \$1,000,000, shares \$1 par. **Lands:** 7 miles W. of Kerby, are said to carry gold-copper ore. Idle.

VASCO MINING CO. (Tungsten.)**COLORADO**

Subsidiary of Vanadium Alloys Steel Co., Latrobe, Pa. J. A. McKenna, v. p. and gen. mgr., Voegtle Bldg., Boulder.

Acquired property in the Nederand district in Fall of 1915, and remodeled the old Boyd mill for concentration of tungsten ores which are both mined and purchased. The ore is ferberite occurring in veins in pegmatite or granite. Mill equipment: crusher, rolls to $\frac{1}{4}$ ", trommel jigs, stamps for jig tails, classifiers for jig hutches and battery pulp, Card and Wilfley tables, Monell slimers.

Holdings Apr., 1916, include 15 operating mines, shipping 8-10 tons concentrates weekly. Two mills have been built and another is in process of erection.

VEKOL MINING CO.

Dead. Described in Vol. XI, Copper Handbook. Property is being worked, 1915, by M. M. Carpenter, lessee.

VENTURE HILL MINING CO.**ARIZONA**

Office: 1515 Shatto St., Los Angeles, Cal. Jas. G. Scarborough, pres.; Mrs. Carrie G. Taylor, v. p.; Wm. R. Uber, sec-treas. Inc. 1900 in Arizona. Cap., \$3,000,000, shares \$1 par. Lands: 6 patented claims, 110 acres, 2 miles S. of Jerome, show 2 fissure veins, claimed to average 4.7% copper, 6.5 oz. silver and \$4 gold per ton, in oxide and sulphide ores, developed by shafts of 65' and 87' and tunnels of 205' and 457'. Idle since 1904, and out of funds. Reported in June 1916, that property had been taken over by the Verde Combination Copper Co., which see.

VERDE COMBINATION COPPER CO.**ARIZONA**

Jerome, Ariz. Reported in June, 1916, that this company had been incorporated in Ariz. by Jas. M. Layman, Robt. E. Moore and K. D. Washburn of Jerome. Cap., \$1,000,000; shares 50c par; fully paid; non-assessable.

Property: holdings reported to include property of the Pittsburgh & Jerome Copper Co., the Venture Hill Mining Co., the Black Hills Copper Co., described under their respective titles, the Verde Cons. Copper Co., the Muscal group, and two fractions.

The last attempt in 1914 to finance the company by a bond issue resulted in failure and all the officers resigned, Aug. 3, 1914. On Dec. 30, 1915 suit was filed in Superior Court by bondholders to foreclose trust deed.

VERDE GRANDE COPPER CO.**ARIZONA**

Idle since Feb. 1909. Jerome, Yavapai Co., Ariz. J. C. Scott in charge of property. Inc. Sept., 1906 in Arizona. Cap., \$8,000,000; shares \$1 par; issued, \$5,700,000. Company endeavored, Aug., 1910, to float a \$20,000 bond issue, among its shareholders, but only \$2,000 was subscribed, which was returned, but in a second attempt, made 1912, about \$5,000 was raised for which 3-year bonds, at 6 per cent were issued; outstanding \$4,976.

Property: 9 claims 5 patented, 125 acres, on the southern slope of Smelter hill, the United Verde being on the opposite slope, about a mile distant, lands being located on a precipitous hill. Claims show diabase, diorite, slate and schist, carrying stringers of argentiferous and auriferous azurite, chalcocite and chalcopyrite, of good assay tenor, but not in commercial quantities, occurring mainly in schist. The management believed that the lands carry an extension of the United Verde orebody. Development: by an 838' shaft and 3 tunnels, with about 2,000' of workings.

Equipment: includes a steam plant, with a 60-h. p. hoist, good for 1,500' depth, and an 8-drill Ingersoll-Rand air compressor. There are 8 buildings, including a 40x44' power house, 12x18' carpenter shop and 12x14' smithy, with a bunk house and a mess house.

VERDE QUEEN COPPER CO.**ARIZONA**

Reported in Smythe's *Obsolete American Securities* Vol. XI, 1911 "New Jersey charter void 1906, for non-payment of taxes."

At a stockholders' meeting held in Jersey City, N. J. May 6, 1916, dissolution of the company was approved. It was decided to make a distribution of part of its assets consisting of 1,000,000 shares of Jerome Verde Copper Co.'s stock; holders of Verde Queen stock to receive in partial liquidation 200 shares Jerome Verde stock for each share of Verde Queen stock.

Property of the company was taken over in 1906 by the Jerome Verde Copper Co.

VERDE QUEEN MINING CO.**ARIZONA**

Pantano, Prima Co., Ariz. P. M. Hilton, sup. Lands: in central part of Empire mining district, about 12 miles from Pantano, and 15 miles W. of Benson, show silver-lead and copper ores, developed by a 280' 2-compartment shaft, from which a little lead ore was shipped to the El Paso smelter. Equipment: includes gasoline hoist. Idle for several years.

VERMONT COPPER CO.**VERMONT**

Office: 576 Fifth Ave., New York. Mine office: South Strafford, Orange Co., Vt. G. E. Parks, sec.; G. M. Heckscher, mgr.

Inc. 1906, in Arizona, as successor of Elizabeth Copper Co. **Cap.**, \$1,000,000, and since has taken over the Strafford Mining Co. and the Sharon Power Co.

Property: 12 miles from Pompanoosue, the nearest rail station, includes the old Elizabeth mine, opened 1793, for magnetic pyrites, and operated early in the nineteenth century by the Vermont Copperas Co., which is said to have made, at one time about 6,000,000 lbs. of copper yearly, beginning a small incidental production of copper about 1830, when it was found that the mine carried an average of about 3 per cent copper, in the form of chalcopyrite disseminated in pyrrhotite.

Geology: the orebody is a thin lens of pyritic ore in foliated mica-schist, wedging out at the bottom. The lens has been mined for 700' in length and is reported, by the management to have been opened up for more than 2,000' in length, ranging from 50 to 100' in width, of which 8 to 10' is ore. Management estimates upwards of 1,000,000 tons of pyritic ore in sight, consisting of pyrrhotite and pyrite with small amounts of chalcopyrite. Diamond-drill borings, made 1909, have shown ore to continue for 200' depth below the present workings. **Development:** by a 1,340' tunnel with back of 225', and a 200' incline blind shaft. The dumps carry about 50,000 tons of discarded ore of which large portions are estimated by the management to average 1.75 per cent copper.

A hydro-electric power station on the White river, equipped for 500 h. p. formerly transmitted current 9 miles to the mine and works. There also is a small steam plant and an air compressor at the mine.

The reduction plant at the mine included a mill and smelter, the former using the Rowland magnetic separation process. The smelter has a 300-ton blast furnace in which semi-pyritic smelting was tried, but abandoned 1908, for heap roasting.

After an idleness of several years operations reported to have been resumed June 1916, under management of Professor George Guess of the University of Toronto.

VERNAL MINING CO.**NEVADA**

Office: 351 Bullitt Bldg., Philadelphia, Pa. Mine office: Goldfield, Nev. **Officers:** M. Schamberg, pres.; E. S. Van Dyke, treas.

Inc. in Arizona. **Cap.**, \$1,500,000; shares \$1 par; increased 1915 from \$1,000,000. Central Trust and Savings Co., Philadelphia, transfer office. Listed on San Francisco and Salt Lake City Exchanges.

Property: 2 claims, in Diamond district, Goldfield, is developed for a few hundred feet, partly by lessees. Has shipped in a small way.

VERNON MINING CO.**COLORADO**

Office: W. L. Fleming, pres., 50 Broad St., New York; C. L. Horton, vice-pres.; Louis DeWolf, sec.-treas.; A. G. de Golyer, mgr., Ironton, Colo.

Inc. in Delaware 1916. **Cap.**, \$1,000,000; shares \$1 par; 550,000 shares outstanding; 490,000 issued to syndicate subscribers.

Property: 3 claims, 1 patented, 31 acres, located at timber line (11,000'), in the Red Mountain mining district of Western Colorado, about 7 miles from Ouray.

Claims show 3 well defined fissure veins in altered andesite. The Beaver vein has not been prospected. The South Dakota vein lying between the Vernon and the Beaver is traceable for several thousand feet and shows an outcrop that is 50' to 80' wide. This vein is parallel to and about 150' from the Vernon; the dip being opposed the two veins should unite at about 300' in depth. The veins carry gray copper ore with high silver-copper values, in well-defined ore shoots. The South Dakota vein has a shoot 175' long, that will average 5' in thickness opening to a width of 20' in stopes above the tunnel level where the ore averaged 12 per cent copper.

44 oz. silver and \$2.80 per ton in gold. The Vernon vein shows a width of 3' of high-grade silver-copper ore in a drift at the bottom of a 48' shaft.

Development: on the South Dakota vein consists of a 100' incline shaft and a 175' tunnel, giving a back of but 50'.

Equipment: includes machine drills, electric hoist, compressor, etc. Management plans sinking South Dakota shaft to the 300' level, crosscutting to the Vernon vein and opening up stoping ground.

Property meritorious; management good.

VESUVIUS MINES CO.

OREGON

Frank J. Hard, supt., Bohemia, Lane Co., Ore. **Property:** the Vesuvius group of claims, has about ½ mile of workings, showing veins with gold-silver-copper ores. Developed to 300' depth by tunnels and stopes. **Equipment:** includes water, steam and electric power and 10-stamp mill.

VICEROY MINING CO.

ARIZONA

Office: Janesville, Wis. Mine near Patagonia, Santa Cruz Co., Arizona. **Officers:** Frank H. Baack, pres.; M. G. Jeffris, v.-p.; M. O. Mouat, sec.-treas., Janesville, Wis. Inc. Oct., 1912. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; issued, \$600,000.

Property: 8 claims, unpatented, 164 acres, in the Tyndall district, 20 miles N., N. W. of Patagonia, shows a number of fissure veins, traversing porphyry or following contacts between diorite and porphyry and dipping 45°. The vein is said to range from 6 to 75' in width. Ores are principally silver-bearing, but show occasional bornite and a little lead ore above the water level, reported to carry from 16 to 199 oz. silver per ton.

Development: by shafts of 40' and 100' with about 400' of tunnel workings in leached ore.

Idle for lack of funds, but company planning to resume operations, 1916.

VICKSBURG GOLD AND COPPER CO.

UTAH

Mine near Milford, Beaver Co., Utah, leased June 1916 to United States Mines Operating Co. **Property:** 5 claims in Star district, covering 4,000' of limestone belt cut by ore-bearing fissures. **Development:** shallow, but ore shipped May, 1916. Property will be equipped with machinery.

VICTOR & BELLE CROWN MINING CO.

ARIZONA

Wenden, Yuma Co., Arizona. **Officers:** J. E. Matteson, pres. and gen. mgr.; F. C. Piper, v.-p.; J. H. Matteson, sec. treas.; B. J. Quinn, cons. engr.; at last accounts.

Property: 10 claims, 180 acres, in the Harcúvar mountains, 8 miles N. of Salome, the nearest rail point. Claims are said to have a vein of 5 to 7' width, a 30 to 36" paystreak, giving assays of 15 to 20% copper and \$15 to \$20 gold per ton. **Development:** includes shafts of 80', 35', and 450', and tunnels of 755', 165' and 230', aggregating about 1,200' of workings. **Equipment:** includes gasoline power. Idle.

VICTOR CONSOLIDATED MINING CO.

UTAH

Office: P. O. Box 1225, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. **Officers:** J. S. Wells, pres.; A. W. McCune, v. p.; J. A. Groesbeck, sec.; W. S. McCornick, treas., with J. H. Brown, directors. Vivian McCune, gen. mgr.

Inc. 1903 in Utah. **Cap.**, \$375,000; shares 50 cts. par; all issued; assessable, with 5 assessments levied and fully paid. Stock is listed on the Salt Lake Exchange.

Property: 5 claims, 38 acres, patented, including the Victor and Boss Tweed mines, carrying gold and lead-silver-bearing copper ore, developed to depth of 800'. The company is idle and the mine has been in the hands of lessees since 1909. Shipments reported to run 7% copper and 8 oz. silver per ton.

VICTOR GOLD MINING CO.

COLORADO

Property ordered sold at receivers sale, Sept. 11, 1916, at Nogales, Ariz. Cripple Creek, Colo. Controlled by Moffatt-Smith estates. Owns the Victor mine, with reported production of \$2,250,000 to 1900. Operated 1916.

under lease by A. Osberg. Mine had been inactive for many years and was supposedly exhausted when present lessees began operations.

Main shaft 1,000' deep, has 14 levels. For geology of district see U. S. G. S. Prof. P. 54.

Production: in 1915 varied from 200 to 500 tons monthly, of milling ore yielding \$10 to \$20 per ton.

VICTOR MINING AND SMELTING CO.

MEXICO

Office: 315 Schultz Bldg., Columbus, O. Mine address: Cananea, Sonora, Mex. Officers: S. D. L. Jackson, pres.; M. F. Cole, v. p.; F. P. Jackson, sec.-treas.; preceding with J. S. MacLean, W. H. Sartain, C. Thornton, Chas. Schindler and C. A. Stillwagen, directors; W. A. Woodlief, fiscal agt.

Inc. May 9, 1905, in Arizona. Cap., \$1,500,000, increased 1907, from \$1,000,000; shares \$10 par; issued, 90,000 shares. Title to property is held through the Guerrero Mining Co., legalized in Mexico. Annual meeting, second Monday in January.

Lands: 47 pertenencias, in 2 groups in the Magdalena district, about 12 miles S. W. of Cananea. The property shows fissure veins in granite-porphry intruding sedimentary rocks. The veins are strong and well defined, very silicious and high in iron content.

Development: by a shallow shaft and 5 short tunnels, with a total of about 1,500' of workings, showing high-grade copper ore with small gold and silver values, in 2 veins of about 4' and 70' width, the wider vein showing evidences of considerable leaching. The mine has no power or equipment. Property closed down in 1914 owing to revolutionary disturbances in Mexico.

VICTOR POWER & DEVELOPMENT CO.

CALIFORNIA

J. H. Sharpe, pres., Red Bluff, California. C. D. Jackson, mgr. Owns the Midas mine, Gold Hill, Bonanza and other properties in Harrison Gulch, Shasta Co., Calif. The Midas alone is credited with a total production of \$8,000,000. Main shaft is 1,300' deep. Equipment: includes 20-stamp mill, cyanide plant, hoist, etc.

Production: 3 months ending March 1, 1915, from mines, \$20,000, from cyaniding tailings, \$27,000. Capacity of mill is to be increased to 200 tons, and hydro-electric power will supplant steam.

VICTORIA CONSOLIDATED MINING CO.

UTAH

Controlled by Bingham Mines Co.

Office: 404 Dooly Blk., Salt Lake City. Mine at Eureka, Tintic district, Juab Co., Utah. Officers: H. H. Green, pres.; Harold P. Fabian, v.-p.; with A. L. Hoppaugh, R. E. Mark and Chas. C. Dey, directors. J. R. Brain, sec.-treas., Provo. Imer Pett, gen. mgr.; Wm. Owens, supt.

Inc. March 7, 1899, in Utah. Cap., \$70,000, shares 10c par; \$49,985 issued. Has paid \$207,500 dividends to 1916.

Annual meeting first Monday in January. Gross earnings in 1915 were \$11,724 and net operating gain \$2,407.

Property: 7 patented claims, 50 acres, includes the Snowflake and Victoria mines at Eureka. Ore is gold-silver-lead with some copper, occurring in chamber deposits in limestone. Pay ore occurs in shoots and streaks of variable size, up to 100' in width.

Development: includes 1,200' shaft with 2,500' of workings. Has compressor, added 1913, 112 h. p. hoist, and uses electric power.

Production: 7,455 tons in 1912; 12,552 tons in 1913; 8,763 tons in 1914; 3,071 tons in 1915; a total of 58,806 tons. Shipments in 1915 averaged 9.06% lead; 12.40 oz. silver; .242 oz. gold. The Victoria mine has been the main producer.

VICTORIA COPPER MINES CO.

NEVADA

C. W. Reynolds, supt., Dolly Varden, Nevada. Officer: F. A. Strehlke, sec., Goldfield, Nev. Property: the Victoria mine, an old copper producer now reopened and equipped.

VICTORIA COPPER MINING CO.**MICHIGAN**

Office: 60 Congress St., Boston, Mass. **Mine office:** Victoria, Ontonagon Co., Mich. **Officers:** Fred H. Williams, pres.; Chas. D. Hanchette, v. p.; Jas. P. Graves, treas.; preceding with Willard S. Martin and A. W. Chester-ton, directors; Sydney S. Millett, sec. and transfer agent; George Hooper, supt., J. C. Butler, mine supt.; Chas. D. Hooper, mill and power supt.; G. A. Braun, Jr., engr.; A. R. Penberthy, clerk and purch. agt.

Inc. Jan 16, 1899 in Michigan. **Cap.**, \$2,500,000: shares \$25 par; all issued; paid in, \$15. Last assessment \$1, April 15, 1914. Shares listed on the Boston Stock Exchange. First National Bank, Boston, registrar. Annual meeting fourth Monday in February. Company ended 1915 with quick assets of \$134,769 and account payable, \$22,489.

Property: 2,389 acres mining lands, in Secs. 19, 20, 29, 30 and 31, T. 50 N., R. 39 W., and Secs. 24, 25 and 36, T. 50 N., R. 40 W. This tract has an extreme E.-W. width of 2 miles, and a N.-S. length of $2\frac{3}{4}$ miles, lying just W. of the Ontonagon river. It is practically all on the mineral belt, only about 100 acres lying on the eastern sandstone. The tract may carry the western extension of the amygdaloidal bed under development by the Lake Copper Co. Neighboring mines, all idle for many years, are the West Minnesota on the N., National on the E. and Tremont-Devon on the W. The lands are well timbered, with an inexhaustible supply of good sandstone for building purposes. Nearest railroad is the C. M. & S. P., at Rockland. 3 miles distant.

The first known attempt at Lake Superior copper mining was made in the winter of 1770-71, on what is now Victoria property. In 1849, the property known then as the Cushin, was opened on a line of prehistoric pits containing masses of native copper, one weighing upwards of a ton. The name was changed 1850, to Forrest, and property reorganized 1858, as the Victoria Mining Co. Under these titles the property made 373,279 lbs. fine copper at a loss of about \$180,000. The mine was operated regularly, on a small scale, 1849-55, and thereafter spasmodically. It was unwatered 1883, but remained idle until work was begun March 1, 1899, by the present company.

Geology: the mine is located on a high and steep hill, notwithstanding which the solid rock is covered with heavy sand and clay drift. The Forrest amygdaloid bed, on which the mine is opened, is 5 to 80' wide, averaging about 12', but of very irregular width and dip, and very buncy in contents. The average strike is N. 66° E., and dip 61° N. W., the lode having about 2 miles of outcrop on Victoria lands. The formation is much disturbed at surface, the bed being irregular in dip, but widening at depth, with more regular walls. The lode is low in average grade, but fairly regular in copper contents, carrying low-grade stamp rock, with best values near the hanging wall.

Development: the old mine was opened by 5 shafts, deepest, 300', located at irregular intervals, with levels spaced at 55 to 65'.

The Victoria, or, No. 2 shaft, which was chosen for new operations, was enlarged to 2 compartments, and a third compartment was added, 1916, 16' E. of the skipway. The two skips will work in balance. The shaft is 2,655' deep, bottomed below the 26th level. Levels between the 4th and 24th have been opened at regular intervals of 100', below the 23rd at intervals of 150', with drifting on all levels. The total drifting on the Forrest bed, tributary to No. 2 shaft, was 45,270' at the end of 1915, and in addition there are 8,068' of crosscuts.

Short drifts have been opened from these crosscuts on various beds, but without much encouragement. The total openings tributary to No. 2 shaft are 58,769' and the mine was estimated, 1914, to show 300,000 tons of stamp rock, with 300,000 tons blocked out for stopping.

The productive part of the mine tributary to Victoria or No. 2 shaft, is on the Forrest bed, an epidotal amygdaloid having an average width of 4' to 12', widening to 80', at one point. Walls are quite regular, but where

crush zones occur, the mineralization extends into the walls, giving an occasional maximum of 50' width of ore. The footwall bed underlying the Forrest, at a depth of 2 to 12', is well mineralized in places, carrying occasional masses from 100 lbs. to 3 or 4 tons in weight, but is very bunched, copper occurring mainly on the foot, with considerable epidote on the hanging. Underlying this epidote bed, at a distance of 60', is a 6' amygdaloid showing much epidote and allied minerals, with a little stamp rock. Stopes opened on all levels from the 4th to the 22nd inclusive, give fairly uniform results.

The copper shoot developed by this shaft is 1,000 to 1,500' wide, with a slight rake to the S. W. The ore stoped is low in average grade, but fairly regular in contents, with main values in stamp copper. All levels down to the 17th are connected by winzes, giving ventilation and safety.

Development: 1915, included 2,947' of drifts, with a total of 3,454' of new work and 7,595 cubic fathoms stoped. The mine uses 35 power drills.

An exploratory shaft, 2,600' E. of No. 2, was sunk, 1907-1908 to depth of 121' with some drifting and crosscutting, which met with small encouragement, and work was stopped.

No. 6 shaft, 3,455' E. of No. 2, was started Dec., 1909, to develop the eastern end of the property, previously explored by diamond-drill borings. This shaft has three compartments, with 2 skipways, designed for 6-ton skips and is 886' deep. There are 1,490' of drifts and crosscuts, showing broken and faulted ground, barren of copper, excepting for about 100', a short distance W. of the shaft.

The mine also has 419', 150' and 724' crosscut tunnels, the latter showing the contact between the Keweenawan trap beds and the eastern sandstone with several amygdaloidal beds exposed on which 176' of drifting gave a little encouragement.

Considerable diamond drilling has been done N. of the Forrest bed, a total of 15,292' of holes having been drilled, in 2 cross-sections, disclosing several beds that may warrant future attention.

No. 2 shaft has a new shaft house, equipped with a duplex Nordberg hoist, good for 5,000', and a 5-ton traveling crane for handling skips, man cage and timber.

The rock house has storage bins for stamp rock and waste, with chutes, loading gates and air lifts, and there is a pneumatic hammer for mass copper.

The power house is equipped with a 20x48" duplex-cylinder hoist, having a single conical drum of 8' minimum and 12' maximum diam. with 11' face, carrying 3,000' of 1½" rope, raising 4-ton skips, and equipped with an automatic safety stop and throttle closing device. The boiler house is for heating purposes only. A steam power plant is being added to use as a reserve when water supplying the hydraulic plant is low.

Buildings at No. 2 shaft include machine and carpenter shops, smithy, changing house hospital, warehouse, general store, mine office, boarding house, 76 dwellings, sawmill, lath, shingle and planing mill. Water for domestic use and fire protection is pumped from a well having a storage tank about one-half mile from the mine.

Hydraulic Plant: a large water power has been developed from Glenn Falls, on the W. branch of the Ontonagon river, about 1 mile from the mine, at a cost of \$440,593, to Dec. 31, 1912. This is the best natural water power of the Lake Superior copper district, the stream dropping about 110' on the company's property, by a series of small falls, between which are numerous rapids, with sandstone bottoms. The company utilizes 72' of this drop. Power is developed by means of a dam, canal and hydraulic air compressor.

The dam is 225' between abutments, has an extreme height of 24', is 14' wide at the bottom and 8' at the top, and has a 320' main section with wings of 100' and 160', giving a total length of 580', built with an arch up-stream. It is provided with two 44" flush gates, for drainage and flushing out silt, a log chute, waste weir and sand fence.

The canal diverting water from the dam is 4,800' long, 10' deep at the head gates, with a bottom slope of 1" in 100'. At the end the canal opens out in a forebay, at the extreme end of which the compressor shafts are located. The canal is equipped with drainage gates, slush gates, overflow weirs and submerged measurement gates.

The 3 intake shafts of the compressor are 5' in diameter, spaced 19' from center to center. The shafts were sunk through solid sandstone, by means of 5" preliminary holes, bored to the required depth of 343', then enlarged from 5" to 5' in diameter.

The shafts, lined throughout with concrete, formerly drew air through 5,000 special $\frac{3}{8}$ " tubes. This proved unnecessary as the water falling down each shaft sucks air with it and this air is carried through 280' of air chamber cut in the rock at the bottom of the shaft. A water seal at the intake end is formed by $\frac{3}{8}$ " steel shells, firmly concreted into the bottom of the shafts. The air chamber is 281' 6" long, and 18' wide, with minimum of 21' and maximum of 26' height, having a maximum capacity for 80,264 cu. ft. of compressed air. The water seal at the upflow end is formed by an arch of rock, 40' long, below which a tunnel 10' high leads to the upflow shaft, which is 16x18' in section, sunk at 72°, with a vertical depth of 271', leading to surface, where the water is again discharged into the river. The power head developed is 72', and the pressure head 271', giving a maximum air compression of 117 lbs. per sq. inch. Imprisoned air, carried down the shafts by suction and swept along the tunnel in bubbles, by the rushing water, is released in the chamber where the constant accession of bubbles causes compression, escape backwards being prevented by the $\frac{3}{8}$ " steel shells connected in the shafts. The chamber, known as the compressor, is connected with a 12" pipe line to mine and mill. Extra pressure is relieved by a safety or blow-off pipe.

The Taylor hydraulic-pneumatic plant was completed, March 1906, furnishes 4,000 to 5,000 h. p. under a full head of water, and has shown an efficiency of 82% under test. It is the largest single-unit air compressor in existence, and the fifth installation of the sort in the world. It is possible to operate 1, 2 or 3 of the inlet shafts, if so desired, with corresponding variation of energy developed, but only 1 unit is in regular use. The compression is automatic, practically isothermal, and the air as delivered is unusually dry.

An extensive topographical and hydraulic survey of the company's lands and the watershed made 1909, by the J. G. White Co., of New York, shows that an average of 15,000 h. p. can be developed on the western branch of the Ontonagon river, but the expense of development necessarily will be large. During the drought of 1910, the water supply fell far below normal and additional storage for water was secured on the western branch of the Ontonagon river, near the outlet of Lake Gogebic.

The mine and mill are connected by a 4,800' tram line, in 2 sections, the upper with 6%, and the lower with a 12% grade. A stationary double-sheave hoist, at the top of the incline, serves to pull the empty cars up the steeper grades, but otherwise trains are operated by gravity, in counterbalance.

Mill: the stampmill, on the bank of the river, near the hydraulic works, has a single 24x24" Allis-Cuyahoga stamp. The stamp of 650 tons daily capacity, has $\frac{3}{8}$ " mortar screens, and all oversize above $\frac{1}{2}$ " is run to a set of 16x36" Traylor rolls. The washing floor contains 22 Hodge jigs, 5 Wilfley tables, 6 Card tables, 1 Standard table, hydraulic separators and settling tanks. Machinery is driven by a 12x12" piston-valve engine. The mill went into commission June, 1906, tailing losses running only 0.1 to 0.15% copper. Extraction is about 81%. Mineral (concentrate) formerly smelted by the Calumet & Hecla Co. is now smelted by the Quincy smelter at Ripley, thereby effecting an appreciable saving in transportation.

Year	Ton R'k Stamped	Lbs. Cu. p. Ton	Cost p. Ton. (a)	Copper Prod. lbs.	Cost p lb. cts

1906	39,185	13.9		546,334	18.7

(a) Mining and Milling. (b) High cost due to the labor strike and high footage, 7,428', of development.

Tonnage costs are low, but finished copper costs are high, owing to the exceedingly low average tenor of the rock stamped which is only about 0.65%, and returns would be absolutely ruinous, and the mine hopeless, were it not for the great advantage that the property enjoys through the cheapest power that is had by any copper mine in this or any other district. It is obvious that the Victoria needs 15 cent copper to break even on its present basis of production. With the larger ore supply procurable through the new skipway in No. 2 shaft, even the present phenomenally low average cost will be bettered, and the Victoria placed in a position to handle rock of lower average grade than perhaps any other mine in the Lake Superior district. The company's holdings are extensive, exploratory work is being conducted with vigor, and the management has displayed both courage and good judgment in its operations.

VICTORIA GOLD MINING CO.

UTAH

Care Mrs. R. S. Robertson, treas., 1076 E. 2nd South St., Salt Lake City, Utah. Dr. A. A. Kerr, pres.; E. W. Hall, v.-p.; M. G. Robertson, sec.

Property: 8 claims, patented, near Gemini mine at Tintic. **Development:** 500' incline shaft and 400' tunnel opening up a large body of manganese iron ore carrying lead values. A new tunnel is to be driven in 1916-17 to open a new find.

VICTORIA MINING AND SMELTING CO.

NEW MEXICO

Bankrupt. Holdings bought by C. J. Boyd of Los Angeles at sheriff's sale, Dec., 1915. **Property:** 2 groups, 1,000 acres, 20 miles apart, the Southern group between Organ and San Andres Mts.; the other in Plomo district, San Andres range, 35 miles N. E. of Las Cruces. Claims which show large bodies of silver-lead ores of milling grade will be opened and developed in 1916.

VICTORY COPPER MINING CO.

ALASKA

Inactive. **Office:** 817 Alaska Bldg., Seattle Wash. **Mine office:** Ketchikan, Gravina island, Alaska. **Officers:** M. McTernan, pres.; E. D. Fisher, v.-p.; Maurice D. Leehey, sec.; J. R. Kelley, treas. **Dr. C. O'Connor, C. J. Cronin and E. F. Tiernan, directors. Inc. March, 1901, in Washington. Cap., \$1,500,000, shares \$1 par; non-assessable; fully issued. Annual meeting, first Monday in September.**

Property: 14 claims, 9 patented, 260 acres, on Seal bay, Gravina island, 22 miles S. of Ketchikan, extends from sea level to 4,000' above the beach. Lands show granite, greenstone and limestone reported to be cut by 11 veins, of which 4 were developed. The main vein is estimated by management to average 22' in width carrying chalcopyrite with quartz gangue and to assay about 5% copper, 19% sulphur, 19% iron and 52% silica, with \$2 per ton in combined gold and silver values. **Development:** by 2,100' tunnel, intersecting 11 veins.

VIENNA-INTERNATIONAL MINING CO.

IDAHO

807 Bank St., Wallace, Ida., care R. A. Marshall. Reported in June, 1916, that Frank C. Bailey and associates of Spokane had obtained control of the company. **Officers:** F. V. Phinney, pres.; Robt. A. Marshall, sec.

treas.; F. C. Bailey, gen. mgr., Robt. Mack, supt., with A. B. Livingstone, W. B. Lively and D. Rosenbaum, directors. Annual meeting called for Sept. 5, 1916, at Wallace.

Property: 6 claims, 3 patented, and a mill site, near the mouth of Flora gulch, on Placer creek, 6 miles S. of Wallace, shows banded shales and quartzites of the middle part of the Newland formation, striking N. 50 to 60° W., and dipping 70° S. Principal vein has a quartz-siderite ore-body, 3 to 5' wide with strike almost E.-W. and vertical dip. Ore on the dump shows galena, pyrite and chacopyrite in a quartz-siderite gangue of too poor a grade to be profitably concentrated.

Development: by a 400' shaft, and 2 tunnels of 700'. New management plans unwatering the shaft, sinking to 500' and drifting on the 400' and 500' levels.

VINCENT GREEK GOLD & COPPER CO.

OREGON

Austin, Grant Co., Ore. Burton Miller, pres.-gen. mgr.; Ernest Blackwell, v.-p.; Nellie H. Miller, sec.-treas., and J. S. Edwards, directors.

Inc. Dec. 5, 1907, in Oregon. **Cap.**, \$200,000; shares \$1 par; issued 100,002 shares.

Property: 100 acres, in the Greenhorn district, 5 miles N. W. of Austin, on the S. V. R. R., shows a strong vein, traceable 1,500', said to average 14' in width and 3.5% copper.

Development: by a 25' shaft and 215' tunnel being driven 600' with back of 400'. In Feb., 1916, a 20' vein of copper ore was opened in this tunnel. There are 3 buildings. Mine has no power equipment.

VINDICATOR CONSOLIDATED GOLD MINING CO. COLORADO

Office: 603 Symes Bldg., Denver, Colo. **Mine office:** Independence, Colo. **Officers:** A. J. Zang, pres.; I. T. Snyder, v.-p.-gen. mgr.; G. S. Wood, sec.-treas., with A. F. Zang and Chas. Sigel, Jr., directors. G. A. Stahl, asst. sec.; H. P. Nagel, Jr., supt. of mines; A. R. Minner, supt. of mills; T. H. Sheldon, pur. agt.

Inc. Nov. 20, 1896, in Colorado. **Cap.**, 1,500,000 shares; \$1 par; all issued; non-assessable; no bonded indebtedness. Annual meeting 2nd Thursday in February. International Trust Co., Denver, transfer agent and registrar. Listed on Colorado Springs Stock Exchange.

Rumored July, 1916, that the company is to combine with the Cresson, the Golden Cycle Mining Co. and United Gold Mines, the Cresson having been bonded for \$4,270,000 as a preliminary step.

General Balance Sheet:

	Property	Equip.	Secur.	Cash	Miscel.	Total
Assets—						
1915	\$2,436,751	\$105,330	\$179,289	\$286,495	\$ 54,229	\$3,062,094
Liabilities—

1915	\$1,500,000	\$340,000	\$1,220,918	\$1,176	\$3,062,094

Comparative Income Account:

	Mine Receipts	Mine Expense	Oper't'g Profit	Other Receipts	Divi- dends	Other Deduc.	Surplus for Year
1915....	\$1,969,646	\$703,783	\$1,265,862	\$84,302	\$225,000	\$1,046,939(a)	\$78,225
1914....	636,568	335,708	300,860	10,818	270,000	60,521	(d)18,843

(a) Includes notes paid, \$910,000. (d) Deficit.

Dividends: 1900, 17½%; 1901, 15½%; 1902, 23%; 1903, 16%; 1904, 9%; 1905, 13%; 1906, 12%; 1907, 13%; 1908, 15%; 1909, 7½%; 1910, 1911, 1912, 1913, 12% each; 1914, 18%; 1915, 15%; 1916 to May 1, 6%; total, \$3,652,500.

Property: a number of patented claims, about 130 acres, at Independence on Bull Hill, Cripple Creek district, Teller county. Owns 95% of stock of Christmas Gold Mining Co. and bought the mine of the Golden Cycle Mining Co., 43.5 acres, purchased March, 1915, for \$1,300,000, fully paid April, 1916. Property includes former holdings of the Keystone Mng. & Mlg. Co. Owns La Bella plant, near Golden Cycle dumps, to

be used as a flotation plant. Also owns tungsten ground in Nederland district, Colo.

Geology: the plateau on which Cripple Creek is located is mainly made up of a red granite. Breaking through this is a "plug" of volcanic breccias and tuffs composed of phonolite, and including many granite fragments torn off and carried up from below. This volcanic core is cut by dikes and intrusive masses of syenite and phonolite, and latest of all the basalt dikes.

The ores occur in veins which follow a system of steep fissures, the veins being mere fissures with a central film or streak of ore filling and an impregnation of the wall rock on both sides. The low-grade ores are formed by mineralization of the country rock adjacent to such narrow seams. Most of the veins occur in sheeted zones ranging in width up to 40'.

The gold occurs chiefly as the telluride calaverite, with but little silver, but associated with it there are small quantities of iron, copper, zinc and molybdenum sulphides. The gangue is either quartz and fluorite with some carbonate or merely altered rock. The greatest horizontal extension of any pay shoot thus far opened, is about 1,300'. Such pay shoots are many and usually vary from 4'-40' in length. The vertical extension has not yet been reached in some shoots. For detailed geology see U. S. G. S. Prof. Paper No. 54; "Nature of Ore Deposits," by Beck and Weed, or Lindgren's "Mineral Deposits."

The gold content of the ore from the Vindicator and Golden Cycle mines in 1915, averaged \$23.73 per ton; of the ore shipped by lessees, \$16.57 per ton.

Development: by Vindicator shaft, 1,650' deep and Golden Cycle, 2,200'; linear extent of workings, about 400,000'. Mining methods, filled stope and square sets.

Upon completion of the Cripple Creek Drainage Tunnel, pumping costs, \$41,273 in 1915, will be greatly reduced. On Jan. 1, 1916, the heading was about 8,290' from the Golden Cycle shaft, advancing about 300' per month.

Mine equipment: includes two hoists, Sullivan electric and Ingersoll-Sargent compressors; 3 electric triplex 175-h. p. pumps. Power is steam and electric.

Concentrating mill employs crushers, rolls and screens, and treats 300 tons daily. A 10-ton experimental flotation mill has been in operation more than a year and plans for 300-ton equipment are under way.

Production: for 1915 was 218,487 tons crude ore which yielded 125,397 tons shipping ore; gross value, \$2,164,669; net, \$1,718,022. Lessees shipped 49,188 tons; gross value, \$815,183; net, \$546,364. Received net royalties from lease operations, \$251,624.

Operations in first half of 1916 were largely on the Middle vein system of the Vindicator, an immense orebody being opened for stoping from the 12th to 18th levels. Only a small part of the work necessary on the 19th and 20th levels of the Golden Cycle has been completed.

VINDICATOR MINES & TUNNEL CO.

COLORADO

Property near Idaho Springs, Colo., leased May, 1915, to Gold Standard Leasing Co., financed by Casper, Wyo., and San Francisco capitalists. Mine said to carry the Tom Tuck vein, 6' wide, with porphyry hanging-wall.

VINEGAR HILL ZINC CO.

WISCONSIN

(Owned by Mark Manufacturing Co.) **Office:** Platteville, Wis. W. N. Smith, mgr.; J. McCulloch, gen. supt. Operates Blackstone, Rundell, North Unity, Hodge, Graham, Treganza, Martin and Kittoe mines in Platteville district. Ships galena and blende concentrates, also marcasite, containing 44% sulphur. Has a roaster at Benton, Wis. In 1915-16 the company developed rich "runs of ore" in the Martin, Treganza and Kittoe mines at Benton. The Kittoe concentrator jigs out 300 tons concentrate weekly.

VIPOND MINE.

ONTARIO

See Porcupine Vipond.

VIPONT MINING CO.

UTAH

Address: H. G. McMillon, 649 E. S. Temple St., Salt Lake City, Utah. W. A. Wilson, mgr. Company owns 800 acres in Ashbrook district, in N. W. corner of Box Elder Co., developed by 5,000' of workings from which much ore was formerly shipped.

VIRGIN COPPER CO.

PENNSYLVANIA

Last address: 12 West Bldg., York, Pa. Mine office: Charmian, Franklin Co., Pa. John H. Dechert, pres.; Chas. E. Wills, v.-p.; Clarence A. Wills, sec.; Harry S. Wiest, treas. Lands: about 1 mile N. of Charmian, in the Blue Ridge mountains, near the Maryland state line, show ore carrying native copper, with silver and gold values said to give assays of \$25 to \$600 per ton. Development: by 215' shaft sunk at 47°. 4 diamond drill holes, of 165 to 800', were bored, 1907. Equipment: includes small hoist and compressor. Is considered an unpromising venture. Idle.

VIRGINIA-CAROLINA CHEMICAL CO.

General office: Richmond, Va. Corporate office: Jersey City, N. J. Officers: S. T. Morgan, pres.; E. B. Addison, 1st v.-p.; S. D. Crenshaw, v. p.-sec., with C. G. Wilson, N. S. Weldrum, Henry Walters, Harry Bronner, L. Oudin, A. J. Hemphill, Alvin W. Krech, C. I. Stralen, S. H. Miller and Geo. W. Wetts, directors. S. W. Travers, treas.; E. T. Orgain, aud.

Inc. Sept. 12, 1895, in New Jersey. Cap., authorized, \$38,000,000 Com. and \$30,000,000 8% cumulative Pfd.; increased May 12, 1914, from \$20,000,000; shares \$100 par; outstanding \$27,984,400 Com. and \$20,011,800 Pfd. The \$9,988,200 unissued Pfd. stock is reserved to provide for conversion of the 10-year 6% debentures. Annual meeting, first Wednesday in Sept. New York Trust Co., New York, transfer agent. Guaranty Trust Co., New York, registrar. Listed on New York and Richmond Stock Exchanges.

Bonded debt: \$12,900,000. First Gold 5's dated Nov. 2, 1908; due Dec. 1, 1923. \$4,862,000 10-year 6% convertible gold debentures dated May 15, 1914, due May 15, 1924.

Balance sheet, year ending May 31, 1916, showed assets: \$87,982,270, which included current assets of \$34,719,690, compared with \$36,288,060 the previous year. Current liabilities were \$7,437,833, compared with \$9,641,578 the previous year.

Income account for fiscal year ending May 31, 1915, showed net earnings of \$5,427,467, compared with \$4,979,949 the previous year. Dividends absorbed \$1,600,472. Surplus for year, \$2,486,275, compared with \$1,638,967 the previous year.

Company was formed to consolidate a number of manufacturers of fertilizers, acids, chemicals, and kindred products. It owns and operates large pyrite mines, producing a large portion of the pyrite used by it in manufacturing sulphuric acid; in addition it has foreign potash, sulphur, and other properties. Controls the Sulphur Mining & Railroad Co., which sec.

VIRGINIA CONSOLIDATED GOLD MINING CO.

IDAHO

Idle. Office: 123 Atlas Blk., Salt Lake City, Utah. Mine near Baker, Lemhi Co., Idaho. L. M. Byers, pres.; W. A. Byers, sec.-treas. and gen. mgr.

Inc. 1904, in Idaho. Cap., \$500,000; shares \$1 par.

Lands: 15 claims, 11 patented, 300 acres, in the Sand Creek district, 5 miles from a railroad, show slate, granite and porphyry, with 8 fissure veins, said to average 2' in width and to be traceable 6,000', carrying chalcopryrite and galena, assaying up to 7% copper, 2 oz. silver and \$25 gold per ton. Mine is reported to have 6,000' of workings, with 10,000 tons of ore in sight. Equipment: includes a 3-stamp mill. Mine is being operated under lease by the Lemhi Gold Mining Co.

VIRGINIA COPPER MINE.

Office: care Richard Lamb, 90 West St., New York. **Mine address:** High Hill, Halifax Co., Va. **Property:** the High Hill mine, 1,617 acres, in the Virgilina district, developed by 8 shafts of 140 to 300' depth, with about 1 mile of workings. Mine shows 2 veins giving assays up to 5.9% copper, 2 oz. silver and 80 cts. gold per ton. Ores are highly silicious, the gangue containing about 87% silica, which precludes smelting and wet process concentrating.

Property was formerly operated by the Virginia Copper Co., Ltd. **Equipment:** includes a 350-h.p. steam plant. Idle several years, but plans resuming operations in 1916.

VIRGINIA MINING CO.

Controlled through stock ownership by General Chemical Co. Operates the Gossan pyrite mine at Monarat, Carroll Co., Va.

VIRGINIA QUARTZ MINE.

Owned by White Gulch Mining Co., which see.

VIRGINIA SMELTING CO.

Office: 131 State St., Boston, Mass. **Works office:** West Norfolk, Norfolk Co., Va. **Officers:** W. E. C. Eustis, pres.; A. H. Eustis, v.-p.; F. A. Eustis, sec.-treas.

Inc. Nov. 10, 1909, in Maine, as successor of Eustis Smelting Works. **Cap.**, \$1,000,000; shares \$100 par; nonassessable; in \$500,000 preferred and \$500,000 common stock. Annual meeting, first Tuesday in October.

Company owns the Eustis Smelting Works, or Norfolk smelter, located on tide water, near Norfolk, with railroad facilities to all points. The location is favorable for custom smelting, as more coal is shipped from this vicinity than from any other center in North America and traffic commands favorable freight rates on return cargoes. The location also insures the best coke for metallurgical use, on advantageous terms. Ore received by vessel is unloaded by machinery into standard railway cars, with facilities to set aside any desired portion into a sample car, standing on a separate track. The unloader has a maximum capacity of 1,000 tons in 24 hours. Railroad cars containing ore are hauled by locomotives upon trestles, whence ore and coke are dumped into storage bins having capacity for 25,000 tons of ore, and if necessary, the works can store 50,000 tons of ore.

The smelter has a single water-jacket blast furnace, of 600 tons daily capacity, using sea water for the jackets. The plant does a general custom business, treating ores from Sherbrooke, Quebec, and ores from El Cobre mine of the Cuba Copper Co., the iron in the Sherbrooke ore fluxing the silicious Cuban ores. The works contain 2 Dwight-Lloyd sintering machines; one operates on copper material in connection with the blast furnace, and one treats the leached residues and pyrite cinder to produce sinter, which is shipped to pig iron blast furnaces; a Ramen-Beskov chloridizing furnace, a leaching and precipitating plant, and a large gas washing plant. Experiments with the MacKay Copper Process Plant for depositing electrolytic copper from leaching solutions have been conducted for about a year. The management is not yet certain whether it will continue the electrical precipitation of copper.

The smelting department of the works is operated under a lease on a royalty basis, by the Norfolk Smelting Co., a New York corporation.

VIRGINIA ZINC & CHEMICAL CORPORATION, LTD.

Offices: 27 William St., New York and Bristol, Va. **Officers:** John T. Williams, pres.; John T. Williams, Jr., v.-p.; M. Graf, sec.-treas., with R. T. Greene, directors.

Inc. Dec., 1911, in Va. **Cap.**, \$2,500,000; shares \$25 par; outstanding \$1,300,000.

Owens mining properties in Georgia, Kentucky, North Carolina, Tennessee and Virginia, furnishing materials for the manufacture of chemicals used in the paint, paper and rubber business. Has a chemical plant at Bristol, Va.

VIRTUE MINES DEVELOPMENT CO.**OREGON**

Jas. K. Romig, treas., Baker City, Oregon. George W. Field & Co., Boston, bonded property early 1916 for \$50,000.

Property said to have produced \$3,000,000, but has been idle for nearly 15 years. (See Min. Res. of Oregon Vol. 1, No. 8, Dec., 1914, p. 130.)

VIVIAN MINING CO.**ARIZONA**

Office: Merchants' National Bank Bldg., Los Angeles, Calif. **Mine Office:** Oatman, Ariz. **Officers:** E. M. Ross, pres.; G. A. Hancock, v.-p.-gen. mgr.; E. A. Olson, sec.; the foregoing and E. P. Thom, C. Leonhardt, R. Deving, directors. Farmers & Merchants National Bank, treas.

Inc. in Cal. **Cap.**, \$500,000; shares \$1 par; assessable; outstanding 410,292. No bonded indebtedness. Annual meeting, first Saturday in July.

Property: 11 claims, 183 acres, 2½ miles W. of Oatman, Mohave Co. **Development:** 450' shaft; workings 5,400'. **Equipment:** two Fairbanks-Morse 40-h. p. oil engines; steam compressor; 8-h. p. hoist, electric light plant, buildings, etc. Developing, 1916.

VOLCANCILLOS MINES.**MEXICO**

Mine office: Avenida Borbon No. 6, Autlan, Jalisco, Mex. Carolina Blake, mgr. **Property:** 28 pertenencias, 70 acres, and a 10-acre mill site, with 100 sq. miles of timber lands, held under a government concession in the Cacoma district, including the Volcancillos and adjoining mines. The Volcancillos group, 12 miles W. of Autlan, shows diorite-porphry dikes, with contact deposits 5 to 80' wide, the largest one containing chalcopryrite ore assaying 4 to 15% copper, 4 oz. silver and nearly \$5 gold per ton.

Development: includes a 300' two-compartment shaft with about 1,000' of workings and several tunnels, 1 having a back of about 150' but still in the oxidized zone. The mine is estimated by the management to show about 100,000 tons of ore. The ore deposit, discovered 1860, was opened by Edward Blake, was operated under bond and lease for a while by the Cacoma Mining & Smelting Co., but reverted to Mr. Blake and still remains in his family.

Equipment: includes a steam plant with 40-h. p. hoist, good for 1,000' and a 10-ton mill and smelter, now abandoned. The ore from the Volcancillos is sold to the local Indians, who have been metal workers from time immemorial. The natives buy the crude ore, paying 4 cts. per lb. for the copper content. They crush and concentrate the ore, smelting the concentrate in little furnaces, making copper cakes which are skillfully fashioned into pots, kettles and other articles.

VOLUNTEER MINING CO.**UTAH**

Milford, Beaver Co., Utah. **Officers:** W. C. Albertson, pres. and gen. mgr.; W. H. Havenor, v.-p.; S. G. Cole, sec.; H. E. Havenor, treas., asst. sec. and engr.; preceding with Geo. Havercamp, directors.

Inc. in Utah. **Cap.**, \$50,000; shares 10 cts. par; nonassessable; issued \$25,550. Annual meeting, second Monday in May.

Property: 6 claims, unpatented, 600 acres, in the North Star district, 7 miles from the S. P. L. A. & S. L. R. R. Claims show contact deposits between limestone and intrusive porphyry. The mine has only two 12' pits and a 70' tunnel. Company reported March, 1916, to be operating a lease on the north end of the Lakeview Mining Co.'s property.

VULCAN MINES & SMELTER CO.**COLORADO**

Office: 302 Century Bldg., Denver, Colo. C. H. Mace, supt., Iola, Colo. **Officers:** Robt. G. Ainsworth, pres.; C. H. Mace, v.-p.; Chas. P. Mety, sec.-treas.; above with W. W. Mace, Geo. E. Bermont, John R. Rowland and F. J. Greenwald, directors.

Inc. Nov. 3, 1915, in Colo. **Cap.**, \$100,000; shares \$1 par; 75,000 issued. Stock transferred at company's office. Annual meeting in November.

Property: 9 patented claims, 95 acres, in Domingo mining district, Gunnison Co., said to show gold-silver-copper ore in fissure veins. Ore is a sulphide occurring in sericitic schist. The orebody strikes E.-W. and

dips N. 80°. Old workings and dumps said to have a considerable tonnage of ore averaging 1 oz. gold; 4 oz. silver and 2½% copper per ton.

Development: by 700' vertical shaft with 5,000' of underground workings. **Equipment:** includes steam power, hoist, and 50-ton hot blast copper matting furnace, installed in 1916. Mine credited with production of \$200,000 under former ownership.

VULCAN MINING CO.

WASHINGTON

Formerly the McKinley Mining Co., which see. **Office:** 1723 Cincinnati St., Spokane, Wash. Mine at Orient, Stevens Co., Wash. **Officers:** H. M. Gibson, pres.; P. Lewis, v.-p.; A. O. Stuberg, sec.; P. Larsen, treas.; preceding with J. D. Grimes, directors.

Inc. July, 1914, in Wash. **Cap.**, \$1,500,000; shares \$1 par; assessable.

Property: 7 claims, 4 miles N. E. of Rock Cut at 2,850' elevation, said to show 3 northwest veins with gold-silver-copper ores.

Development: on No. 1, a gold-silver vein, includes a 148' shaft, with 42' crosscut, 53' shaft and 570' tunnel, 300' below the surface. Crosscutting in 1916 on the 570' tunnel level to tap the main orebody. No. 2 vein is developed by 4 prospect shafts, a 37' tunnel and 100' incline. The third vein is opened by a 75' shaft.

VULCAN MINING, SMELTING & REFINING CO.

NEVADA

Cherry Creek, White Pine Co., Nev. J. H. Leishman, mgr. **Inc.** in Wyoming. **Cap.**, 2,500,000 shares.

Property: 15 patented claims, 300 acres, in the Hunter district, about 30 miles from Ely, the nearest rail point, shows copper, iron and silver-lead ores occurring in fissure veins in monzonite and limestone. Developed by 300' and 500' shafts and 2,600' tunnel, with a total of 2,000' underground workings. **Equipment:** includes hoist, compressor and steam power. Lessees produced 65 tons of ore in 1915, averaging \$38 per ton.

VULTURE MINES CO.

ARIZONA

Wickenburg, Ariz. **Officers:** Robt. Mackay, pres.; F. W. Rockwell, v. p.; R. T. Sewall, sec., Boston; A. McLean, treas.; the foregoing and A. R. Mackay, F. M. Kimbark, E. I. Marvell, J. B. Sullivan, Jr., directors. Spencer Hutchinson, cons. engr.

Cap., 600,000 shares; par \$5; all issued. No bonded indebtedness. 35 Congress St., Boston, Mass., transfer office. R. T. Sewall, registrar. Annual meeting, June 1.

Property: 31 claims, 11 patented, 618.2 acres, 15 miles S. W. of Wickenburg. The quartz vein in schist contains gold, with some galena and pyrite, dips 37° and strikes N. 85° E. Pay ore occurs in shoots, the main orebody being 35' by 300'. Mine is worked by back stoping and waste filling through two inclined shafts 765' and 595' deep. Greatest depth of workings, 1,239'; linear extent, 25,000'.

Equipment: includes Ottumwa hoist; gas and steam engines; Sullivan compressor; Cameron pump; 700' tramway; 125-ton stamp mill with concentrating machinery.

Ore: treated, 1912, 19,689 tons; 1913, 33,174; 1914, 36,348; 1915, 29,968 tons. No recent financial statement has been made. For ten months, 1913, ore averaged \$20.54 per ton; recovery, \$17.40 per ton; total value, \$429,416.

WABUSKA COPPER MINES CO.

NEVADA

Dead. See Minnesota-Nevada Copper Mines Co.

WADE MINING CO.

MISSOURI

Officers: Evan W. Buskett, treas., Joplin, Mo.; John L. Fay, pres.; C. E. Benton, v. p.; Frank J. Bane, sec., all of St. Louis, Mo.

Property: lease of Gilt Edge Mining Co., on 120 acres of ore land, 2 miles E. of Tipton Ford, said to carry lead-zinc ore. **Development:** shaft and drill work. Plans to erect mill.

WAGNER AZURITE CO.

NEVADA

Dead. Company became financially involved in 1913, after borrowing \$60,000 from stockholders for the erection of a mill and leaching plant,

the latter proving unsuccessful. The noteholders brought suit, getting judgment for the amount due and succeeded in obtaining control of the property in 1914. The Ideal Copper Co. was incorporated and the mine is described under that name.

WAH-CHANG MINING & SMELTING CO.

CHINA

Branch office: 2283 Woolworth Bldg., New York. K. C. Li, mgr. Is the leading mining and smelting company in China. In 1915, sold from 700 to 800 tons of antimony monthly in the United States and practically controls antimony market of the world. Also smelts tin and produces tungsten, lead and zinc ores.

WALCOTT COPPER MINING CO.

WYOMING

Walcott, Carbon Co., Wyo. W. C. Sammons, pres.; F. A. Raynor, v. p., at last accounts. Inc. 1907. Cap., \$1,000,000. Property: the Elkhart mine, 7 claims, near Elk mountain, is said to have an 80' shaft that shows a good sized orebody of about 3% copper. Equipment: includes a small steam plant and hoist. Long inactive and probably dead.

WALDO SMELTING & REFINING CO.

OREGON

Office: P. O. Box 64, Colorado Springs, Colo. Mine office: Takilma, Josephine Co., Ore. Officers: Spencer Penrose, pres.; J. A. Hull, treas.; preceding officers, J. A. Hayes, Wm. T. Tutt, directors. E. C. Tucker, supt. Inc. Dec. 3, 1901 in Colorado. Cap., \$3,000,000; shares \$100 par. Is closely affiliated with the Takilma Smelting Co.

Property: 20 claims, patented, 400 acres, with a mill site and 650 acres of placer ground, near the Queen of Bronze mine, about 40 miles from the S. P. R. R. The claims show several fissure veins said to average 10' in width and to carry sulphide ores averaging 12% copper and \$3 gold per ton. Development: by shaft and 3 tunnels. The Copper King shaft, about 200' deep, has an 80' level showing a good orebody. The 700' Lyttle and the 400' No. 2 tunnels, on the same claim, are also said to show good orebodies. The 310' Cowboy tunnel connects with the incline shaft 160' below surface and was planned to be extended to intersect the known pay-shoots. Management considered good and property promising.

WALDORF CONSOLIDATED MINING CO.

COLORADO

Succeeded by Imperial Consolidated Mining Co., which see.

WALKER MINING CO.

CALIFORNIA

Office: 331 D. F. Walker Bldg., Salt Lake City, Utah. Mine near Portola, Plumas Co., Calif. Officers: Jos. R. Walker, pres.; G. L. Bemis, v. p.; John F. Cowan, gen. mgr.; preceding with M. S. Browning, directors.

Inc. 1913 in Arizona. Cap., \$1,250,000; shares \$1 par; issued \$750,000. Stock is listed on the Salt Lake Exchange. Control of company is said to have been purchased, 1913, by the Cowan-Browning interests of Salt Lake City and Ogden.

Property: 34 claims, 10 patented, heavily timbered, with good water power available, in an unorganized district, 18 miles N. E. of Portola, on the Western Pacific railroad. The claims show altered diorite with a big gossan outcrop up to several hundred feet in width, running N. W. across several claims. This is underlain by a vein estimated to be 27' to 60' wide. A shallow zone of oxidation is succeeded by sulphide ore, carrying secondary sulphides, but mainly chalcopryrite, estimated by the company to average 6% copper and 3 oz. silver per ton.

Development: by 35' and 70' shafts. The 70' shaft has a 27' crosscut at the bottom said to show an orebody with an 8' paystreak assaying up to 4.5% copper, 3 oz. silver and \$1 gold per ton, the balance of the crosscut in ore of about 2.75% copper with small gold and silver values. Company claims to have 30,000 tons ore blocked out. Drilling has disclosed copper ore over a large area, for 65' to 350' in depth.

Reports, in July, 1916: development by shaft 125' deep with level at 65' extended 300'. Adit for drainage, 600' long, cut a 22' vein at 150' depth, directly beneath the main shaft.

Equipment: includes a small steam plant with a 20-h. p. hoist and several mine buildings. Company has recently built a 100-ton flotation mill.

Production expected to begin in August, 1916, as soon as aerial tram to mill is in operation.

Reported July, 1916, that company is being sued by J. C. Gladden for \$200,000, alleged to be due under an agreement with J. R. Walker.

In August, 1916, the property was purchased by Anaconda Copper Mng. Co., through its subsidiary, International Sm. & Ref. Co. Purchase price said to be \$670,000.

WALKER RIVER COPPER CO.

NEVADA

Office: 45 Broadway, New York, and Yerington, Nev. Officers: David Provost, pres.; Wm. H. Alexander, v.-p.-mgr.; Wm. Gelder, sec.-treas., with Maxwell M. Upsom and M. Clinton Mason, directors. John H. Banks, cons. engr. George H. Cogswell, supt., Yerington, Nev.

Inc. June, 1915, in Nevada. Cap., \$1,000,000; shares \$5 par; outstanding \$750,000 Com. and \$22,000 Pfd. In treasury \$228,000 Pfd., 7% cumulative. Transfer office: 15 Exchange Place, Jersey City, N. J. Registrar & Transfer Co., New York, registrar. Annual meeting, first Monday in June.

Property: 15 claims, 250 acres, including mill site, near Yerington, Lyon Co., shows a low-grade porphyry copper deposit said to cover an area 1,000'x4,800' s6 far as drilled. Ore: is said to assay Cu, 3%; S, 0.5%; SiO₂, 72%; Fe₂O₃, 5%; Al₂O₃, 11%; CaO, 2%; MgO, 1%.

Development: 175' vertical shaft and a 900' tunnel through the orebody. Drilling is said to have proved the orebody to extend to 500' depth. Present work is done by quarrying. Ore reserves: management claims 550,000 tons 2½% ore proven by drilling and surface and underground work.

Equipment: a 400-ton leaching plant is being built and will use the "Midland" wet chloride process.

Production: in 1915 lessees shipped 5,000 tons of 3 to 5.9% copper ore. Total production to date, 10,000 tons.

Company plans drilling an additional 200 acres during the next year. Property has been examined by Louis A. Wright and John H. Banks.

WALLA WALLA COPPER MINING CO.

WASHINGTON

Office: Walla Walla, Wash. Mine office: Keller, Ferry Co., Wash. Jasper King, supt. Property: 1 milé N. E. of Keller, in the southern half of the old Colville Indian reserve, shows a vein of 30' estimated width, partially mineralized with gold-copper ore of fair assay value. Developed by an open-cut shaft and tunnel. Reported in June, 1916, that company has struck a large body of high-grade copper ore, and is working 3 shifts.

WALLACE MINING, MILLING & REALTY CO.

IDAHO

M. R. Evans, mgr., Wallace, Idaho. Property: 9 claims on Placer creek, alongside of city limits of Wallace, said to show a big vein with scattered galena ore.

Development: by 1,500' tunnel advanced 300' in 1915. Is equipped with electric power, compressor, etc.

WALLOWER MILL

MISSOURI

Built in 1914 by F. C. Wallower to treat lead and zinc ores of Prosperity Camp, Joplin district. Capacity, 300 tons per 10-hour shift. Equipment: 100-h. p. electric motor, 16" crusher, rolls, screens, jigs, classifiers, Deister tables and slimers. Operated steadily in 1915, and mine work in connection has opened another shaft in 1916 in order to supply the mill with ore.

WALNUT CREEK MINING & MILLING CO.

ARIZONA

Kingman, Mohave Co., Ariz. C. E. Worton, pres.; R. P. Wheelock, mgr. Property: 9 miles S. of Kingman, shows a 14" vein of gold and silver-bearing copper ore. Reported under development in 1915-1916.

WANAKAH MINING CO.

COLORADO

John T. Roberts, Jr., gen. mgr., Ouray, Colo. Operates the Bright Diamond, Ironclad and Memphis group of properties north of Ouray, Ouray Co., and the pyritic smelter leased from the Brown Mountain Co. for two years. Operations have been intermittent, the 200-ton matting furnace having a capacity far in excess of the ore supply of the district.

Opened as a custom smelter March 1, 1914; only 1,489 tons of ore was received during the remainder of the year.

Reported in June, 1916, that the Wanakah mine was being reopened preparatory to 6 months' development work. It is claimed that mine is not more than 25% worked out.

WANDERING JEW MINE

ARIZONA

Comprises a group of four claims in the Lyndall district on the W. slope of Santa Rita mountains, near Alto, Santa Cruz Co., Ariz., owned by M. & L. Lulley and R. R. Richardson. Operated under bond and lease by E. B. & W. E. Holt and M. L. Kaiser of Nogales. First shipments made, February, 1916.

Development: to 100' depth by 2 shafts, 300' apart, drifts and crosscuts aggregating about 2,000' of workings. Country rock is gray diorite. Vein varies from 6" to 4' in width and contains argentiferous galena. About half the deposit is said to be shipping ore, the rest, concentrating grade. Ore is galena from the surface down, but in places contains a little copper carbonate and chalcopryite.

WAR EAGLE CONSOLIDATED MINES CO.

COLORADO

Cripple Creek, Colo. **Officers:** T. Scott, pres.; F. J. Cannon, v. p.; W. H. Malone, sec.-treas.; the foregoing and M. A. Skinner, S. J. Burris, M. E. O'Bryan, T. Annear, directors. T. R. Countryman, cons. engr.

Cap., 5,000,000 shares; par value not reported; in treasury, 4,000,000, to be used in acquiring and developing additional property. Financed by T. M. Pettigrew & Co., Denham Bldg., Denver.

Property: originally 17.3 acres, since increased to 41 acres, in Cripple Creek district, upon which in January, 1916, there was a bond of \$50,000, due in 3 years. **Development:** mostly by lessees; very little work done since 1903.

Official statements have to do mostly with past performances of surrounding properties, and efforts seem to be confined to the sale of stock.

WAR EAGLE GOLD & COPPER MINING CO.

MONTANA

Property: 3 claims, 7 miles S. of Alhambra, in Warm Springs gulch, Jefferson Co., Mont., shows strong fissure veins in granite. Values occur in paystreaks in soft altered granite, the ore consisting of pyrite and a little chalcopryite, whose value is mainly in gold.

Development: by a 300' tunnel, planned to intersect the vein at about 1,500' and give a back of about 500'. Presumably idle.

WAR EAGLE MINE

BRITISH COLUMBIA

Rossland, B. C. See Consolidated Mining & Smelting Co. of Can.

WARDWELL & OSBORNE COPPER MINES CO.

ARIZONA

Osbornes Well, via Parker, Yuma Co., Ariz. **Officers:** at last accounts, Edw. S. Osborne, pres. and gen. mgr.; Chas. W. Wardwell, v. p.-treas.; Fred W. Morrison, sec. Inc. in Arizona. **Cap.,** \$1,000,000; shares \$1 par.

Property: 9 claims, 120 acres, 4 miles N. W. of the Consolidation Copper Mines Co., in the Seneca district, 7 to 10 miles E. of Parker by good wagon road. Claims show an extensive gossan consisting largely of specular iron. **Development:** by a number of shallow pits, shafts and tunnels. A 143' incline shaft shows ore said to assay 4 to 32% copper and 75 cts. to \$9 gold per ton. There is also a 400' tunnel, showing a vein 8 to 28' wide, carrying ribs of rich oxidized ores alternating with streaks of leached and barren limestone, the rich ores being claimed to average 15% with maximum of 42% copper. The mine has about 1,100' of workings. No recent returns secured.

WARREN REALTY & DEVELOPMENT CO.

ARIZONA

Office: 1400 Alworth Bldg., Duluth, Minn. **Mine office:** Warren, Cochise Co., Ariz. **Officers:** T. F. Cole, pres.; Chas. A. Duncan, 1st v.-p.; Chas. d'Autremont, Jr., 2nd v. p.; Frederic R. Kennedy, sec.; preceding with Chester A. Congdon and Capt. Jas. Hoatson, directors; Henry B. Paul, treas.; John C. Greenway, gen. mgr.

Inc. June 29, 1905, in Arizona. **Cap.,** \$900,000; shares \$15 par; issued

\$840,000; fully paid. Controls, jointly with the Calumet & Arizona Mining Co. and Copper Queen Cons. Mining Co., the Warren Co., a corporation capitalized at \$665,000 that owns the town site of Warren, the public utilities therein, and the Bisbee & Warren street railway. Annual meeting, second Tuesday in April.

Property: about 1,800 acres, covering the town of Warren, in the district of that name, includes the Cunningham group and former holdings of the Calumet & Cochise Development Co., 3 claims of the latter group being of mineral value. Considerable diamond drilling was done, 1907-08, with 1 hole 3,200' deep vertically, said to be the deepest in the United States.

The Lone Star shaft, started 1905, on the Lone Star claim, $2\frac{1}{2}$ miles S. E. of the Junction shaft of the Superior & Pittsburgh, has 3 compartments and is 844' deep, sunk in limestone throughout. Development to the N. indicates that ore-bearing ground cannot be expected at much less than 2,000' depth. Property valuable, with a possibility of making a mine when developments on surrounding tracts have proven the ground.

WARRIOR COPPER CO.

ARIZONA

Office: Brown Bldg., Philadelphia, Pa. **Mine office:** Black Warrior, Gila Co., Ariz. **Officers:** Spencer D. Wright, pres.; Geo. H. Buchanan, v. p.; D. H. Paris, sec.; H. S. Hopper, treas., with Ernest L. Tushin, W. H. Francis, Philip Godley, Alfred S. Elliott, W. W. Doughten and Thos. D. Martindale, directors.

Inc. March 10, 1905, in Delaware, as successor of Black Warrior Copper Co., Amalgamated, which came to grief. **Cap.**, \$1,600,000; shares \$10 par; in \$750,000 cumulative 7% preferred stock and \$850,000 common stock. **Bonds:** \$100,000, issued \$41,000, at 6%, with interest paid.

An option on the property, given 1909, to the Warrior Development Co., was relinquished Oct., 1911, and suit was thereupon entered against that company for failure to observe the terms of the agreement. This suit was decided in favor of Warrior Copper Co. in 1915.

Property: 50 claims, 46 patented, about 850 acres, including the Black Warrior group and the Lost Gulch group, near the Inspiration mine. The principal property is the Black Warrior mine, a producer since 1904, located about 7 miles N. W. of Globe.

Geology: the Black Warrior property shows slightly altered schist, dacite tuff, diabase and conglomerate, the greater part of the area being covered by schist, which is the oldest formation. The diabase occurs as intrusive dikes, and the dacite is a surface flow over both schist and diabase. The Black Warrior vein is a fault zone 30 to 60' wide, filled with crushed mineralized dacite for about 300', with a breccia of schist and some diabase below. The vein has a generally E.-W. trend, and W. pitch. The ore averages about 50 to 60' in width, though a width of 100' is shown at a number of points. This property includes the Montgomery group, with the Montana and Dadeville mines, developed by tunnels of about 1,000' and 1,200' length, developing extensive bodies of copper silicates and hydrated copper oxides of excellent average value.

Development: the Black Warrior mine is developed by the Winnie shaft, 500' from the western boundary, and tunnels of about 1,000' and 1,200' length, opening the mine to a depth of 300', with 5 levels spaced at 50' intervals. The mine has yielded a large tonnage of high-grade ore, giving assays of 6 to 25% copper, between the 200' and 300' levels. Considerable churn drilling was done, 1910-11, 1 hole in the vicinity of the Winnie shaft being sunk 506' in schist, showing mineralization, and a 580' drill hole proved the existence of chalcopryite, disseminated in schist, though not of commercial value. The western portion of the property was tested without favorable results by churn drill, May, 1911.

The Lost Gulch claims show a highly altered monzonite-porphry covering the larger part of the area, with extensive outcrops of dacite and limestone and smaller ones of diabase, general geological conditions being much the same as at the Black Warrior.

Equipment: includes a steam plan, burning petroleum. Buildings include an assay office, engineering office, smithy, carpenter shop, several dwellings, and a 300-ton shipping bin.

A portion of the property has been leased to Messrs. Fisk and Snell, who are operating the plant under the name of the Southwestern Leasing & Development Co., and shipping about 100 tons of 6% ore daily. Production is mainly from the 200' and 300' levels.

The old mill and mill site at Warrior P. O., about 1½ miles E. of the mine, was sold, 1912, to the Inspiration Consolidated Copper Co.

WARRIOR DEVELOPMENT CO.

ARIZONA

Office: 1500 Alworth Bldg., Duluth, Minn. Edward C. Congdon, David L. Fairchild, Henry B. Hovland, S. R. Kaufman, J. E. Rotthaus, Harvey P. Smith and Jas. Wanless, trustees.

The company held a \$1,250,000 three-year bond and lease, dated Oct. 9, 1909, on the Black Warrior and Lost Gulch groups of the Warrior Copper Co., which was relinquished Oct., 1911, after a payment of \$100,000. The company became involved in litigation with the Warrior Copper Co., based on the allegations that all monies realized from the sale of ore were not accounted for, and that the mine workings and the mill were handled contrary to the provisions in the agreement. The suit was decided in favor of the Warrior Copper Co. in 1915. The Warrior Development Co. was dissolved in 1915 and assets amounting to \$49,556 in cash and \$50,000 in Rainbow Lode Development Co. stock were distributed among the stockholders.

WARWHOOPE MINING CO.

IDAHO

Probably dead. See Vol. XI, Copper Handbook. Formerly at Larson, Idaho.

WASA (or Hollander) GROUP

MONTANA

Is a property promoted by Makeever Bros., 170 Broadway, New York City, and Journal Bldg., Boston, Mass., whose promotions, including El Favor, Mexico; Royal Basin, Montana; Alaska Gold Belt, Alaska, have been and are still unfavorably regarded. The public is asked to subscribe to shares in an Exploration Syndicate at \$1 a share, with bonus of 4 shares of pooled stock of a corporation to be formed to take over the Hollander, or Wasa group of claims near Hall, Granite Co., Mont.

The group is said to carry the Wasa vein with zinc-copper ore, which Makeever Bros.' engineer, Walter Neal, calculates as 300' wide. Pictures of diamond drill cores and a report by Albert McLease, 1914, are furnished as proof of the worth of the property.

It is to be hoped that the very optimistic statements made about the property come true.

WASATCH BONANZA MINING CO.

UTAH

Officers: Burdell Davis, pres., Provo, Utah; Wm. Davis, v. p.; Brigham Johnson, sec.-treas.; J. M. Buckner, Geo. A. Storrs, directors. **Inc. May, 1916, in Utah. Cap., \$10,000; 1c par.**

Property: 4 claims, the Mayflower group in Decker Canyon, near Charleston, Wasatch Co., Utah.

WASATCH KING MINING CO.

UTAH

Property sold for taxes and company dead. See Vol. XI, Copper Handbook.

WASATCH MINES CO.

UTAH

Office: 722 Judge Bldg., Salt Lake City, Utah. **Mine office:** Alta, Salt Lake Co., Utah. **Officers:** H. G. Williams, pres.; B. F. Kay, sec.-treas.; C. H. Gibbs, mgr.; J. E. Beveridge, supt.

Inc. 1913, as a merger of the Columbus Consolidated Mining Co., Flagstaff Copper Co., and Superior-Alta Mining Co. Cap., \$1,000,000; shares \$1 par; issued 297,083 shares. The consolidation of these properties was effected on the basis of 160,000 shares for Columbus Consolidated Co., 100,000 shares for Flagstaff Co., and 40,000 shares for Superior-Alta. Stock is

listed on the Salt Lake Stock Exchange. McCornick & Co., Salt Lake City, registrar.

Annual report as of Nov. 1, 1915, showed cash on hand, \$3,643; accounts receivable, \$10,428; current liabilities, \$2,996.

Property: 52 claims, about 930 acres, and mill sites at Tanner's Flat and at the mouth of Little Cottonwood Canyon, on the E. flank of the Wasatch mountains. Claims show a number of fissure veins cutting limestone, shale and quartzite, also numerous bedded contact deposits between limestone and quartzite. The bedded deposits contain the principal orebodies. Occasional highly mineralized shoots are found ranging from 30 to 100' in width, several hundred feet long, and carrying up to 11% copper, 18% lead, 15% zinc, 66 oz. silver and \$4 gold per ton, but ore is generally pockety and mainly below payable tenor. Ores are carbonates at and near surface, succeeded by sulphides at depth.

The Flagstaff group carries several ore deposits, one of which is said to range up to 300' in width and to be traceable 2,000'. Developed by the 5,000' Tom Moore tunnel. This tunnel also cuts 6 smaller veins and has a 450' crosscut to the N. E., with about 13,000' of workings. Other workings include the 500' Burgess tunnel, 1,200' Burnswood tunnel, 1,200' Flagstaff tunnel, and the 700' Flagstaff shaft. The mine was a considerable producer of silver-lead carbonates in early days.

The Columbus Consolidated group shows a vein, known as the Braine fissure, of about 12' average width, opened by 2 tunnels, 1,250' apart, on practically the same level. A strike of rich zinc ore was made on the Relief claim, above the Columbus tunnel in June, 1915; the vein was reported to show 3' of ore assaying from 35 to 40% zinc, 2½ oz. silver and 11% lead.

Developed by 5 shallow shafts and 4 tunnels, including a drainage tunnel, 4,000' down the canyon, planned to unwater the Columbus and adjoining properties, with about 3 miles of workings. The Holland and Columbus tunnels are connected on the Braine fissure, the first-named with electric traction. The output is divided into copper, silver-lead and concentrating ore. The mine is wet and has a 600-gal. pump.

Shipments in 1916 assayed from 34c to 70c gold; 8 to 51 oz. silver; 5 to 6% lead; 5 to 14% copper; 6 to 14% excess iron per ton, yielding from \$20 to \$60 per ton.

A Pelton water wheel works under a head of 494', taking water through a 20" and 22" steel pipe line of 4,500' length, developing 660 h. p., which is transformed into electricity by two 300-kw. dynamos and carried to the mine by a 4½-mile transmission line. At the mine there are four 25-h. p. hoists good for 600' each, 10-drill Nordberg and two 5-drill Ingersoll-Sergeant air compressors, a machine shop and a sawmill.

The 150-ton concentrator is equipped with a Gates gyratory crusher, 2 sets of Rogers rolls, six 3-compartment jigs and 7 Wilfley tables, the mill putting about 4 or 5 tons into 1. A cyanide unit was installed in 1915.

Development work above the tunnel level done during 1915 proved disappointing and the management plans concentrating all energy on the deep drainage tunnel to be driven 5,000' about 500' below the present lowest workings and which will make economical and profitable mining at depths possible. Company derives sufficient funds to cover operating expenses from the sale of electric power and compressed air to most of the mines in the district.

WASATCH UTAH MINING CO.

UTAH

Office: Kearns Bldg., Salt Lake City. Mine office: R. D. No. 4, Landy, Utah. Officers: F. L. Palmquist, sec.-treas.; J. L. Kraft, L. Moody, A. W. Manz, J. Hyldahl, E. Tressing, Asa Bacon, J. W. Reihman, directors.

Inc. October, 1902, in Nevada. Cap., \$1,000,000; shares par \$1; assess-

able; all issued. **Bonds:** authorized \$100,000; issued \$35,000. Annual meeting, second Monday in June.

Property: 51 claims, 14 patented, known as the Consolidated Jefferson mine, 9 miles from railroad, near mouth of Little Cottonwood Canyon; also 40 acres dumping ground. Mine has two systems of veins; a narrow E.-W. fissure in horn blende schist with high-grade gold, silver and copper ore, and a large N.-S. quartz fissure about 8' wide containing ore running from \$2 to \$5 gold per ton, which is all milled.

Development: by adit at level of top of mill by glory-hole method through 500' stope.

Equipment: includes compressors, buildings, experimental 5-stamp mill with Wilfley and vanner, large mill with crusher, Chilean mill, plates and Pierce amalgamator. All machinery electrically driven; power furnished by Utah Light & Railway Co.

WASHINGTON COPPER MINING CO.

MICHIGAN

Office: Calumet, Mich. Mine near Delaware, Keweenaw Co., Mich. Chas. A. Wright, Jr., sec.-treas.; Thos. F. Cole, Spencer R. Hill, G. G. Hartley and Thos. Hoatson, directors.

Inc. in Michigan. Cap., \$2,500,000; shares \$25 par; issued \$1,500,000. Is controlled, through ownership of a majority of issued stock, by the Keweenaw Copper Co. Annual meeting, fourth Tuesday in March. **Property:** 1,050 acres, on the western shore of Mosquito lake, on which desultory work has been done at intervals in the past. Idle since 1901.

WASHINGTON-IOWA COPPER MINING CO. WASHINGTON

Idle. Lands: on the eastern fork of Silver creek, 2 miles above Mineral and 14 miles N. W. of Index, adjoin the Edison Mining & Development Co., and both properties are worked under one management. Claims are said to show 5 veins, carrying complex ore, consisting of chalcopyrite, galena, sphalerite and pyrite, with quartz gangue. **Development:** by the 1,200' Bonanza crosscut tunnel.

WASHINGTON LAND & MINING CO.

MISSOURI

Address: W. Maclay, mgr., Bliss, Mo. **Officers:** A. L. Shapleigh, pres.; J. D. Filley, v. p.; R. W. Shapleigh, sec.; the foregoing are directors. **Inc.** about 1880 in Missouri. **Cap.,** \$50,000; \$100 par; all issued.

Owens 6,250 acres lead and baritic lands in Washington Co., operated on royalty basis.

WASHINGTON MINE

COLORADO

P. M. Tyler, mgr., Breckenridge, Colo. An old-time property on Nigger Hill, near Breckenridge, Summit Co., operated under lease by Tyler & Myers after many years idleness. Ore treated in 20-stamp mill and silver, lead and gold concentrates shipped.

WASHINGTON MINE

MONTANA

See Angelica Mining Co.

WASHINGTON MINES DEVELOPMENT CO.

MEXICO

Office: Douglas, Ariz. **Mine office:** Washington Mine, via Huepac, Sonora, Mex. **Officers:** F. O. Bostwick, pres.; Geo. Cass, v. p.; Albert Sames, sec.-treas.

Inc. 1911 in Arizon. **Cap.,** \$1,500,000; shares \$10 par; issued 130,000 shares.

Property: 27 claims, patented, 76 acres, with options on 200 acres additional in the Arizpe district, 60 miles from Nacozari, the nearest rail point. Claims show several big "pipe" ore deposits composed of brecciated rhyolite in dacite. Ore is reported to average 3.2% copper, 0.35% tungstic acid; 1.5 oz. silver and 25 cts. in gold.

Development: by 3 tunnels and 2 air shafts with a total of about 6,000' of workings said to show 600,000 tons of ore blocked out for stoping. Company plans development at depth by sinking a winze from No. 2 tunnel level, 313' below the outcrop, and expects to add 4 additional levels to the workings with the funds in hand.

Equipment: includes a small steam plant with hoist good for 500' and

50-ton concentrator. A mill is being erected in 1916 to treat tungsten ores.

Property promising but needs railroad transportation for profitable working.

WASHOE COPPER CO.

MONTANA

Dead. See Vols. VIII and XI, Copper Handbook.

WASHOE REDUCTION WORKS

MONTANA

Owned by Anaconda Copper Mining Co., at Anaconda, Mont., and described under that title, with names of head officials of the operating staff.

The following list gives the names of the departmental heads:

	Dept.	Supt.	Foreman
Conv. & Cast.....	Pat Dalton.....		P. C. Kelly T. Mulligan J. Nagle
Boiler Shop.....	John Casey.....		C. Olson H. P. Rygard L. B. Crosswhite P. J. McIntyre Joe Hedge John Turner A. Thorson
Local Trm. & Wg.....	W. H. Nutting		Thomas Ryan C. S. Clark Al. Clark
Concentrator	W. A. Estabrook.....		Wm. Brinton John Templeman
Blast	H. S. Ware.....		P. E. Keaney
Surface	W. C. Caldwell.....		Martin Johnson Norman Flint Ben Brush Enoch Olson G. Gordon
Foundry	W. N. Tanner.....		J. E. McDonnell C. Bardon J. A. Dragstedt
Stock Bins.....	Thos. Marron.....		Barney Marror
Leaching Plant.....	H. W. Aldrich.....		J. H. Saville
Reverberatory.....	Ed O'Brien.....		Mike Corcoran
Briquette	H. S. Ware.....		J. D. McCarthy
Oil Flotation and Re grinding.....	Ralph Hayden.....		Martin Skarr K. McKenzie John Kinvig
Masons	A. N. Jette.....		James Foster
Roaster No. 2 and McDougall.....	J. K. Murphy.....		Neil Beaton James Moran
Coal Dust.....	W. L. Warford.....		Mike Murphy
Lab. Samp. Mill.....	Joe Conrady		Thos. Logan
Zinc Concentr.....	S. S. Rodgers.....		Joe Conrady W. Hayes T. W. Hayes

Machine Shop.....	Al Campbell.....		L. D. McPherson E. S. Gregory
Paint Shop.....	James Sweeny.....		J. Sweeny
Lead Burning.....	G. C. Detrich.....		Joe Manning
Water Works and Street Ry.....	H. W. Johnson.....		M. Doyle August Didzum

The Washoe reduction works at Anaconda will have an increasingly varied output in future years. Besides copper, zinc and arsenic, it has an experimental bismuth plant; the sulphuric acid plant turns out 150 tons of 60° acid per day, since July 1916, part of it to be used in the new dynamite factory under construction at Browns Gulch and the rest for the zinc and copper leaching units of the Washoe plant itself, this output being insufficient to meet the outside demand.

Phosphoric acid will be manufactured from phosphate rock brought from the company's land near Melrose, if the experimental plant to be started in 1916 proves successful; superphosphate could be made but will not stand railway freight charges, whereas the phosphoric acid could go into eastern markets. The building and fire brick plants have already been mentioned.

In the treatment of tails from the concentration plant, leaching has proven a trifle cheaper than flotation methods, owing to the fact that leaching tailings carry about 0.08% copper as compared with 0.13% in the flotation tailings. The difference, though it is only a pound of copper per ton, is important where 10,000 tons a day are treated.

WASHOUGAL GOLD & COPPER MINING CO. WASHINGTON

Idle. Washougal, Clark Co., Wash. F. A. Mabee pres.; John Scharboarer, v.-p.; J. B. Jordan and T. A. Altman, secretaries; Dr. Otta Sutter, treas., at last accounts. Inc. 1902 in South Dakota. Cap., \$1,000,000, shares \$1 par.

Lands: 560 acres, held on a 30-year lease, from the state, near Mt. St. Helens, in the Bald Mountain district, on the upper Washougal river, show several vertical fissure veins in granite, one of which, averaging 6' thick, is developed by an 1,800' tunnel exposing ore, estimated to average 5% copper, 15% lead and zinc, 2 to 70 oz. silver and \$1 to \$15 gold per ton.

Equipment: includes gasoline hoists and a 3-drill Sullivan air compressor. Had a 25-ton concentrating mill, 1912. Presumably defunct.

WASP NO. 2 MINING CO. SOUTH DAKOTA

Address: D. A. McPherson, pres., 1st Nat'l. Bank, Deadwood. E. Manion, mgr., Lead, S. D., R. Craig, mill supt. A close corporation, most of the stock still held by original 14 stockholders.

Inc. November, 1901, in S. D. Cap., 500,000 shares; \$1 par; all issued. Original purchase of land paid for from sales of ore. Voluntary assessment of \$50,000 in 1911 to replace mill destroyed by fire. To October, 1914, dividends paid totaled \$451,966.

Property: includes the Alma Fraction and Wasp claims at Flatiron, long famous for low cost mining and milling of low-grade ore. Wolf-ramite occurs along fissures in flat Cambrian quartzite.

Development: by open cuts, steam shovels stripping 20' of waste which overlies an ore bed 20' thick. The total mining cost is \$1.661 per ton. Milling cost is \$0.591 per ton.

Equipment: a new mill for concentrating low-grade tungsten ores, crushes to $\frac{1}{8}$ " by rolls, recrushes in smaller rolls, grinds by ball mill and treats coarse in jigs, sand on Wilfleys and slime on canvas tables. Three grades of concentrates produced, 65%, 45% and 35% tungstic acid.

Production: in 1914, 176,140 tons ore, average value \$2.015 gold and 0.287 silver per ton, returned \$1.533, at a cost of \$1.287 per ton. In 1915, costs increased and operations were curtailed until shipping and milling of tungsten ores added new profits.

From May, 1915 to March, 1916, company shipped 184 tons ore, averaging 45% tungstic acid.

WATT MINE

NEVADA

Owned by Austin Goldfield Mining Co., and operated by H. Lemaire, under lease, several shipments being made in 1915.

Property: the Cambrian or Todd claims on N. side of New York canyon, Reese River district, Lander Co., Nev. **Development:** 300' inclined shaft with 3 levels. Vein in dark quartzite ranges from 4" to 12" wide and consists of white quartz containing tetrahedrite, pyrite, chalcopyrite, and

some blende and galena; dip 25° to 45° N. E.; strike N. 45° W. Ore shipped is said to average about \$125 per ton chiefly silver. **Equipment:** includes a 25-h. p. gasoline hoist.

WAYNE DEVELOPMENT CO.**ARIZONA**

Idle. Property: near Quijotoa, via Weldon, Pima Co., Ariz., includes 49 claims, partly patented, 980 acres and three mill sites, total 1,020 acres, in the Quijotoa district, 40 miles from the Red Rock-Silver Bell railroad. Claims show mineralized zones between granite and andesite carrying several orebodies, one of which is said to be 200' wide and characterized by gold ores. The other orebodies show copper ores containing malachite near surface, succeeded by chalcopryrite, mixed with lead and zinc sulphides beneath the oxidized zone. The ore is reported to average 10 to 30% copper and 5 to 70% lead.

Development: by 1,800' crosscut tunnel, long abandoned, 7 shafts of 60 to 330' depth and about 10 tunnels, longest 430' with total workings of about 4,500'.

Equipment: includes steam and gasoline engines, aggregating 500-h. p. at the mine and mill, two 45 h. p. hoists, good for 700' depth, Fairbanks-Morse and Leyner air compressors, with 17 buildings. The 100-ton stamp mill and concentrator has 30 gravity stamps and a 250-h. p. engine, 4 Blake and Samson crushers, one 50-ton Elspass centrifugal crusher and 3 Standard tables. Long inactive and probably defunct.

WEDGE COPPER CO.**NEVADA**

Luning, Nev. H. H. Hunter, managing director, Lovelock, Nev. Mark Walser, H. O. Howard, directors. Knute Freitag, cons. engr. Inc. March, 1916, in Nevada. **Cap.**, \$1,000,000; \$1 par.

Property: 6 claims, 8 miles from Luning, Mineral Co., is developed by crosscut tunnel cutting copper ore at 800' depth. Said to show 2' of 2% ore in a 6' vein.

WEDGE MINING & MILLING CO.**UTAH**

Office: 1102 W. 7th South St. Salt Lake City Utah. Mine near Marysvale. **Officers:** E. P. Mowers, pres.-gen. mgr.; N. W. Sonnedecker, v.-p.-supt.; M. L. Grovenor, sec.-treas.; the foregoing, E. J. Schenck and K. D. Schenck, directors. **Cap.**, \$300,000; shares \$1 par; all outstanding.

Property: near head of Bullion canyon, 14 miles W. of Marysvale, Piute Co. is said to show a gold-bearing quartz fissure vein in latite; dip 15° S. E. strike N. E.-S. W. Orebody varies from ½" to 20" in width. Mine has been developed and worked chiefly under lease. Workings include a shaft, 150' adit and 65' of drifts. Shipments are of high-grade ore only.

WEEDON MINING CO., LTD.**QUEBEC**

Office: 31 South St., New York. L. D. Adams, mgr., Weedon, Que., Canada. In 1915 acquired the property of the East Canada Smelting Co. at Weedon, from the Precious Metals Corporation of New York. Is developing zinc properties in Quebec and has erected and is operating an electrolytic zinc plant at Welland, Ontario.

Property: comprises 375 acres in Wolf Co., has in 5 years produced 174,000 tons of cupriferous pyrite ore, mined for sulphur as well as copper. Average assays 3.65% copper, 40.8% sulphur, trace lead, 0.77% zinc, 0.5 oz. silver, and 20c gold; market price about \$9 per ton. Ore occurs in lenses in schist. Main orebody is 570' long, 40' to 45' maximum thickness, with dip 45° N. E. and course N. 37° E. **Ore reserves:** September 1, 1914, about 200,000 tons.

Development: by 2 shafts, 100' and 350' deep, and by 4 tunnels, 530', 570', 330' and 100', with 300' of crosscutting. **Equipment:** includes 2 hoists, 3 compressors, one electrically driven with 1,600 capacity, shops, buildings, etc. Company has a mill, with flotation unit, using Gen. Naval Stores flotation oil.

Transportation to railway, 3½ miles, is by aerial tramway and cost is under 7c per ton. Mining costs, 1912, \$2.12 per ton. Estimated production of copper, 1912, 1,957,241 lbs.; 1913, 3,000,000 lbs.

WEIMER COPPER CO.**IDAHO**

Office: care Jesse Knight, Provo, Utah. Mine near Dubois, Fremont Co., Idaho. Property: 18 claims, 360 acres, on Birch Creek, in Skull canyon district, shows a crushed zone 100 to 200' thick between quartzite and limestone, which carries high-grade ore in pockets and in cross fissures, of 3' to 2' width, running at right angles to the main contact deposit. Development: by an open cut and 2 tunnels of 300' each. Idle for several years.

WELLER GOLD MINING CO.**COLORADO**

J. C. Weller, mgr., Telluride, Col. Operates the Ballard mine near Telluride, San Miguel Co. Employed 15 men and was shipping bullion twice a month, in 1915. Equipment: includes pipe-line, tramway, 10-stamp mill fitted with plates and concentrating tables.

WELLINGTON MINES CO.**COLORADO**

Office: Grand Avenue Temple, Kansas City, Mo. Mine office: Breckenridge, Colo. Officers: J. W. Oldham, pres.; J. H. Harkless, v.-p.; C. Charpoit, sec. and treas.; the foregoing and F. J. Dean, C. Histed, W. B. Burget, directors. R. M. Henderson, gen. mgr.

Inc. June 12, 1906, in Ariz. Cap., 10,000,000 shares; \$1 par; non-assessable; all outstanding. Company office in Kansas City, transfer office. C. Charpoit, registrar. Annual meeting, 1st Monday in June.

Gross earnings, year ending December 1, 1915, \$605,741; from sales of ore, \$603,883. Operating expenses, \$188,522; profit, \$458,443. Dividends for the year, \$300,000.

Property: 15 patented claims, 75 acres at Breckenridge, is said to show lead and zinc sulphide ore in a fissure vein in diorite; dip 60° S.; strike N. 50° E. Pay ore occurs in shoots and is said to give average assays of 3% lead, 18% zinc, 23% iron, 15% silver.

Development: by one vertical and inclined shaft, and several tunnels, longest 1,800'. Greatest depth of workings, 850', total linear extent several miles. Orebody is mined by stullng method.

Equipment: includes double-drum electric hoist, 500' compressor, a number of pumps, 1,800' tramway, all electrically driven. There are two mills, a concentrator, and a plant for roasting and magnetic separation. Capacity, 120 tons daily. Lead concentrates shipped, 1915, averaged 42%; zinc concentrates, 47%.

Production: for 1915 was 10,000,000 lbs. zinc. Costs per ton: mining, developing and trammng, \$2.332; milling, \$2.732; hauling concentrates, \$0.241; office and general, \$0.631; total \$5.94 per ton of crude ore.

General manager's report shows a material reduction of ore reserves during the year, actual tonnage being sufficient to supply the mills for 8 or 10 months.

In spite of the abnormally high prices of metals and apparently prosperous conditions, dividends amounted to only 3% of the capitalization, without allowances for depreciation and amortizations. The position of the stock has not been improved by its use as a bait to lure investors into the stock-juggling schemes of Harry J. Newton. It would be interesting to know whether this well known manipulator actually controlled the shares offered the public, and whether he acted with the consent of Wellington Mines Co. directors.

WENDENDALE GOLD MINING CO.**ARIZONA**

Property near Wenden, Yuma Co., Ariz., in the Cunningham Pass district, is developed by a shaft, showing ore that gave returns to 13% copper and \$12 gold per ton, from a test smelter shipment. Shipping ore being mined by lessees in 1916.

WENTWORTH COPPER CO., LTD.**NOVA SCOTIA**

Idle. Address: Wentworth, Cumberland Co., N. S. Inc. 1907, to acquire lands, bought at foreclosure sale, of the Cumberland Copper Co. Company apparently holds property for speculation purposes as no work has been done since purchase.

WERINGER MINES CO.

CALIFORNIA

Officers: Jos. Weringer, pres. and mgr., Woody, Calif. F. J. Weringer, v.-p.; Erwin W. Owen, sec., Nat'l Bank Bldg., Bakersfield, Calif.; Otto Kamproth, treas. with E. H. Woody, Paul Fox and Amasa P. Peak, directors.

Inc. Dec. 17, 1914, in Calif. **Cap.**, \$500,000; \$1 par; 293,543 issued. Secretary is transfer agent. California Corporation Commission granted authority to sell 100,000 shares at 50c in 1915.

Property: the Greenback mines, 68 claims on R. R. land, with 2,200 acres mineral and water rights in sections 1, 2, 3, 10, T. 28 S., R. 29 E., situated 22 miles from R. R. at Oil Center. Mine said to show contact metamorphic deposit a mile long in granite and porphyry, running N. S. and S. W. and dipping 45° to 85°. **Orebody**, 100' wide, carries copper, molybdenite, wolframite, with manganese-iron ore. **Ore** said to average 5% copper, 4 oz. silver and \$1.50 in gold.

Development: aggregating 1,600' by 200 and 230' incline shafts, connected at 200' depth. Latest work on 140' level. **Ore reserves:** 10,000 tons claimed. 1,000 tons on dump valued at \$150,000.

Equipment: 20-h. p. gasoline hoist, 75-h. p. engine, compressor, etc.

Production: about 40 tons, yielding \$45,000. Company constructing a milling plant, expected to begin operations Sept., 1916. Property reported on by W. J. Adams, W. H. Storm, H. W. Turner, D. M. Folsom and other engineers.

WEST COAST MINES CO.

IDAHO

Directors: C. E. Stables, sec.-treas., Lansing, Mich.; Wm. L. Hoag, pres., Lansing, Mich.; H. C. Wyman.

Property: the Pearl mine near Boise, Idaho, showing a vein of gold-silver ore.

WEST COAST MINING & SMELTING CO.

MEXICO

Idle. Office: 30 Church St., New York. Mocerito, Sinaloa, Mex. Howard L. Haines, pres.; Chas. M. Hicks, sec. **Inc.** 1906, in Maine. **Cap.**, \$2,500,000; shares \$1 par; nonassessable; in \$500,000 of 7% cumulative preferred stock and \$2,000,000 of common stock.

Lands: 6 groups, 387 acres, 5 to 20 miles from Mocerito, and 12 to 40 miles from Carbó. Principal property is Los Tajos group, 357 acres, showing andesite, cut by narrow fissure veins of 4' average width that are said to carry chalcopryite ore. The River mine, has a 150' shaft, on a vein of 5 to 8' reported width, carrying ore said to average about 5% copper and \$3 per ton in gold and silver.

Equipment: a 70-h. p. steam plant, a small compressor and 6 drills. The 30-ton experimental concentrator has a Blake crusher, 2 rolls, 2 Bartlett tables and 3 screens. The smelter, at the mine, has a 50-ton water-jacket blast furnace.

WEST DOME CONSOLIDATED MINES

ONTARIO

Office: Traders Bank Bldg., Toronto. **Officers:** Sir Henry M. Pellatt, pres.; Hugh Blair, v.-p.; C. H. Manaton, sec.-treas., with J. A. Murry, A. M. Hay, and G. A. Stimson, directors.

Inc. 1915, in Ontario to take over property and assets of the West Dome Mines Co. **Cap.**, 3,000,000 shares; \$1 par; 2,000,000 shares offered in exchange for 3,000,000 shares in the old company, leaving 1,000,000 in the treasury to provide funds for development. Annual meeting in April. Listed on New York Curb and in Toronto.

Property: 167 acres, adjoining the big Dome on the west, in Tisdale township, Porcupine, Ont. **Development:** by shaft on a quartz vein 2½ to 3' in width at an incline of 70°. Two other veins are known, but no information is available. The incline shaft, 227' deep, on a good vein, will be sunk to the 300' level. Exploration to 600' or 700' by diamond drill has cut 4 veins, one at 700'. Property was idle 1912 to 1915 after fire destroyed plant and buildings with a loss of \$75,000. **Equipment:** includes a 6-drill compressor, 3 boilers and hoist.

It is reported July, 1916, that company is now working on a continuation of the big Dome orebody, and not on the old ankerite (spar) vein which yielded occasional rich specimens. Diamond drilling is said to have cut 10' of \$22 ore at 1,800' depth. The new shaft cut 10' of \$40 ore at 45', and drifting on the 100' and 200' levels has exposed the ore for 50'.

The Dome has a large probable tonnage and is expected to make a big mine.

WEST END CONSOLIDATED MINING CO.

NEVADA

Office: Syndicate Bldg., Oakland, Cal. Mine office: Tonopah, Nev. Officers: F. M. Smith, pres.; B. F. Edwards, v. p.; L. W. Bennett, sec.; preceding with R. L. Oliver, W. J. Douglas, C. P. Murdock, G. C. Ellis, directors; R. C. Bowen, asst. sec.; J. W. Chandler, gen. supt.; J. H. Blair, aud. and purch. agt.; J. A. Carpenter, mill supt.

Inc. 1906, in Ariz. Cap., 2,000,000 shares; \$5 par; nonassessable; outstanding 1,788,486. No bonded indebtedness. Listed on San Francisco Stock Exchange and New York Curb. Registrar & Transfer Co., New York, transfer agt. and registrar.

Total receipts for year ending Dec. 31, 1915, \$905,695; mine expense, \$575,081; net profits, \$303,396; dividends, \$178,849; surplus, \$232,905.

Dividends: in 1913, 5c; in 1914, 15c; in 1915, 10c. Total dividends to 1916, \$536,545.

Property: 10 patented and 4 unpatented claims, 184 acres in the Tonopah district. Also owns 732,065 shares of the Halifax-Tonopah Mining Co.; \$100,000 in Nevada Milling Co.; 350,000 shares of the Santa Rosa Mining Co., mine located in Invo Co., Cal., and a controlling interest in the Independent Lead-Silver Mining Co.

Whether there are two veins or one, the direction and angle of the dip, strike, etc., were the subject of litigation in the suits with the Jim Butler Company, in regard to apex rights of the West End MacNamara vein. This suit has been decided in the lower courts in favor of the West End, but is still pending in the higher courts. For geology of the district see Tonopah Bonanza.

In 1915 mill treated 56,976 tons ore, averaging 0.245 oz. gold, and 23.42 oz. silver, recovering 92.1% of the values. Concentration was abandoned in 1914, as marketing cost of concentrates overbalanced the extra recovery. The mill treated 156 tons, averaging 22.6 tons per stamp. Costs were as follows:

	Amount Used p. Ton		Cost p. Ton	
	1915	1914	1915	1914
Labor (av. of \$4.50 per shift), shift.....	0.156	0.161	\$0.704	\$0.724
Power, kw.-hour.....	36.0	35.0	0.526	0.506
Sodium cyanide, lbs.....	2.6	2.83	0.567	0.600
Cut sheet zinc, lbs.....	1.21	1.34	0.179	0.126
Lime, lbs.....	3.88	3.95	0.028	0.033
Lead acetate, lbs.....	0.66	0.43	0.051	0.037
Fuel-oil, gal.....	3.19	3.10	0.122	0.121
Water, gal.....	226.0	246.0	0.170	0.185
Pebbles, lbs.....	7.39	6.05	0.067	0.105
Tube-mill liners & supplies.....			0.042	0.050
Shoes & dies.....			0.030	0.026
Other supplies.....			0.235	0.255
Total direct milling costs.....			\$2.741	\$2.768
Indirect costs without depreciation.....			0.211	0.202

Total direct and indirect without depreciation.....\$2.952 \$2.970

A third of the ore treated was from the disputed Jim Butler territory but 39 tons a day custom ore, mainly sulphides were treated that averaged \$20.10 per ton.

Development: by 3 shafts, deepest 1,000' with underground workings

aggregating more than 8 miles. Ore reserves are not officially reported, but ore in sight is said to be sufficient for five years. Ore averages about \$14 a ton in gold and silver.

Equipment: includes hoists, buildings, compressors, etc., and the West End mill operated by the Nevada Milling Co., a subsidiary. The daily capacity of the mill was originally 100 tons, but has been increased to 225 tons. Total cost of plant is more than \$170,000.

Production: for 1915 was about 76,000 tons yielding a profit of slightly more than \$4 per ton. Total cost of mining, milling, etc., averaged about \$10 per ton. Monthly earnings during 1916 are understood to average above \$30,000 and production has been increased to take advantage of high silver prices.

The Santa Rosa property, near Bishop, Calif., was worked by lessees early in 1916, but a 4' vein of gold ore, averaging \$35 to \$75 per ton being discovered, the company will work the mine hereafter.

WEST END EXTENSION MINING CO.

NEVADA

Tonopah, Nev. **Officers:** (in 1912) Franz Sigel, pres.; Frank S. Harris, v.-p. with Daniel O. Hulse, M. T. Rowland and Jas. M. Satterfield, directors. Inc. in Del. **Cap.**, \$1,000,000; issued \$600,000; shares \$1 par. U. S. Corp. Co., New York, transfer agent and registrar. Listed on New York Curb as a prospect.

Property: 4 claims, the Bank group, 70 acres, at Tonopah; adjoins West End Cons. on the north and Tonopah 76 on the west.

WEST END MINING CO.

WISCONSIN

Inc. June, 1916, by D. F. Gardner, C. May, L. Hable, Chas. Roselip, Jr., and W. F. Weigle, to lease and operate a zinc mine near Platteville, Wis. **WEST GOLD ROAD MINING CO.**

ARIZONA

Office: Crocker Bldg., San Francisco, Calif. **Officers:** J. W. Wright, pres.; G. T. Campbell, v.-p.; G. Bradley, sec. Inc. in Calif. **Cap.**, 200,000 shares; \$5 par.

Property: 5 claims, 63 acres, near Oatman, said to contain the W. extension of the Gold Road mine. **Development:** consists of main shaft 455' deep, and several crosscuts and drifts. Stock unlisted.

WEST HILL MINING CO.

WASHINGTON

Address: D. M. Drumheller, mgr., Republic, Wash. **Officers:** J. W. Turner, pres., Spokane, Wash.; Thos. Neill, v.-p.; Ralston McCaig, sec.-treas., Spokane; Jerome Drumheller and C. M. Hansen, directors.

Property: the San Poil mine taken on a \$150,000 bond and lease from the receiver of the defunct San Poil Mng. & Milling Co., a well known gold producer, whose ores carry \$7 to \$15 per ton.

Development: by 400' shaft and extensive levels, said to block out 30,000 tons of ore above the 300' level.

There is a 75-ton cyanide mill on the ground, but ore will be shipped to the Trail, B. C., smelter under a new contract. Management plans extending 400' level to cut vein and sinking shaft to 800' in depth.

WEST HILL MINING CO.

WISCONSIN

W. Brown, supt., Platteville, Wis. **Cap.**, \$20,000. In last eight months of 1915, reported to have made 150% profit on capital stock.

Operates zinc lands in Platteville, Grant Co., extending its holdings by amalgamation with adjoining lands. An important shipper of zinc concentrates. Paid a 10% dividend in March and another in June, 1916.

WEST HUNTER MINING CO.

IDAHO

Cap., 1,500,000 shares; 10c par; 600,000 shares in treasury. **Property:** 1 patented, 8 unpatented claims about one-half mile from Mullan, in the Coeur d' Alene district. The claims show a large body of quartz sprinkled with galena, which has been exposed by surface workings. Reported, March, 1916, under option to the Stewart Mining Co.

WEST JORDAN SMELTER.

UTAH

Owned by U. S. Smelting Co., at West Jordan, Utah.

WEST MERCUR MINING CO.**UTAH**

C. A. Bennett mgr., Mercur, Utah. Company is operating a mine on the western dip of the Camp Floyd district, and running a 150-ton mill improved in 1916 and an Oliver filter wheel added.

WEST MEXICO MINES CO.**MEXICO**

Office: Wm. G. Krape Inv. Co., Gas & Electric Bldg., Denver, Colo. Mine office: San Antonio, Baja California. Officers W. G. Krape, pres.-mgr.; D. H. Lawrence, v. p.-supt.; Dr. H. C. Van Norman, sec.; T. Williams, treas.

Inc. Jan., 1912, in Arizona. Cap., \$3,000,000; shares, \$1 par; nonassessable; outstanding 1,985,000 shares. Annual meeting, 1st Wednesday in January.

Property: 3 claims, about 30 acres, in the San Antonio district, 38 miles S. of La Paz, Lower California, Mex. Veins are both fissure and contact, containing gold and silver. Pay ore occurs in shoots and streaks, the main orebody varying from 3' to 14' wide. Sulphides appear at 275' depth.

Development: by inclined shaft, greatest depth being 340' and extent of lateral workings 5,000'. Company claims to have 15,000 tons in reserve with a gross value of \$400,000. **Equipment:** includes a 3-stamp 10-ton concentrating mill.

Production: in January, 1916, is said to have covered expenses, concentrates being stored awaiting transportation. Total production said to be \$20,000 from 6 shipments of ore assaying \$192 to \$326 per ton.

In 1914 the Wm. G. Krape Inv. Co. was selling this stock at "12½c per share, fully paid and forever nonassessable" on the installment plan, a recommendation that is a warning to all but the most foolish.

WEST MINNESOTA MINING CO.**MICHIGAN**

Defunct. John Coughlin, receiver, 68 Devonshire St. Boston, Mass. Inc. about 1854 in Michigan. Cap., \$500,000; shares \$25 par. Was an old and long inactive company owning 550 acres lying mainly W. of the Ontonagon river. Property sold May, 1916, to F. W. Nichols of Houghton, presumably for T. W. Cole. Sale ordered because company's charter had expired.

WEST NINE MILE MINING CO.**IDAHO**

Chas. Heilbronner, pres.-gen. mgr., Wallace, Idaho. H. C. McAllister, treas. Olin & Co., fiscal agents.

Property: a group of claims west of the Success and Alameda mines on west fork of Nine Mile Creek.

Development: by 400' tunnel shows a vein said to carry occasional bunches of ore. It is announced that property will be equipped, a 200' shaft sunk and an additional 300' driven on tunnel, in 1916.

WEST SIDE GOLD & SILVER MINING CO.**OREGON**

R. Baird, sec. and mgr., Yam Hill. Officers: J. A. Simmons, pres.; G. W. Perkins, v. p.; R. Baird, sec.; W. G. Busbie, treas.; the foregoing. C. C. Laughton, N. N. Perkins, N. G. Gist, directors.

Inc. April, 1900, in Ore. Cap., 1,000,000 shares; 1c par; outstanding 814,307; nonassessable. Annual meeting, first Monday, January.

Property: 3 patented claims, about 57 acres, in Greenhorn, Baker and Grant counties, is under lease and bond to R. Baird, who, in 1915 mined about 550 tons in course of development. Values are gold, silver, copper, lead. A number of veins cutting through greenstone and schist run at right angles, the N.-S. veins dipping E., and E. W. veins south. Ores contain sulphides in quartz and dolomite; cinnabar is also reported. Pay ore occurs in shoots about 3' wide. Shipping ore is said to average about \$60 per ton and milling ore \$20.

Development: by several shallow shafts, comprises about 1,000' of workings, greatest depth being about 40'.

Equipment: includes a small steam pump. About \$10,000 spent in development during past two years. Developing in 1916.

WEST TOLEDO MINES CO.

Office: Kearns Bldg., Salt Lake City. **Mine office:** Alta, Utah. **Officers:** H. S. McCarty, pres.; H. S. Knight, v.-p.; J. A. Foley, sec.-treas.; preceding with E. B. Critchlow and W. Thornton, directors. D. J. Lemmon, mine supt.

Cap., 500,000 shares; 10¢ par; outstanding 340,000 shares. Listed on the Salt Lake Stock Exchange.

Property: 11 claims in the Little Cottonwood district, Salt Lake county. **Development:** chiefly by the Superior tunnel which is to be extended to cut several known mineralized veins. Grade of ore so far found is reported to be low. Actively developing in July, 1916, at three places to open the Cardiff west overthrust contact and to explore the Toledo fissure. Property is in a line with Cardiff and Hecla Extension in both of which the overthrust contact has proven ore-bearing.

WEST TONOPAH MINING CO.**NEVADA**

Address: J. G. Kirchen, mgr., Tonopah, Nev. Inactive since 1907, but mine now in process of development under new management, which has acquired 51% of the 1,000,000 shares of stock.

Property: 7 claims S. W. of Tonopah Extension. **Development:** by 850' shaft and crosscuts. It is proposed to extend the shaft to 1,200' and crosscut N. and S., in 1916.

WEST VIRGINIA-WYOMING COPPER MINING CO. WYOMING

Succeeded by Portland Consolidated Copper Co., which see.

WESTERN COPPER CO., LTD.**NEWFOUNDLAND**

Idle. Probably bankrupt. **Property:** the York Harbour mine, at York harbour, Birchy cove, Bay of Islands, N. F. Described Vol. X, Copper Handbook.

WESTERN DEVELOPMENT CO.**NEW YORK**

Bankrupt. Was the successor of Otto Heinze & Co., which firm became bankrupt in 1907.

WESTERN MINES CORPORATION**CALIFORNIA**

Office: 37 Wall St., New York. **Officers:** Major H. S. Howland, pres.; John Landers, v. p., San Francisco, Calif.; D. C. Demarest, v. p.; A. F. Hughes, chief engineer, with A. J. Harwood, directors. W. D. Wright, treas.; Jos. D. Fackenthal, sec.

Cap., \$2,000,000; shares \$5 par. **Bonds:** authorized, \$600,000, debentures 6%, convertible into stock on basis of \$200 in stock for every \$100 in bonds. Issued in denominations of \$100 and \$1,000, dated Aug. 1, 1916, due Aug. 1, 1926. Semi-annual interest, payable Feb. 1 and Aug. 1. Empire Trust Co., New York, trustee.

Property: the company was formed in 1916 to operate the Gwin mine on the Mother Lode, in Calaveras Co., Calif., 7 miles S. of Jackson, Amador Co., also the Sierra Mines, under option, 4½ miles from Downieville, Sierra county and the Inyo County mine. The Gwin mine, acquired in 1867 by Wm. N. Gwin, and said to have produced \$2,000,000 to the 1,500' level, has been idle since 1908.

Geology: the property is said to show the Gwin vein occurring in Mariposa slate. Vein strikes N. 12° W., dips 68° E. The ore shoots vary in width from a few inches to 20'. For geology see U. S. G. S. Folio 63.

Development: by shaft; main shaft sunk 2,400' vertical, cuts the vein at 1,200' level. A winze on the 2,400' level and 450' south of main shaft is 450' deep. **Ore reserves:** management claims 240,000 tons averaging \$4.25 gold per ton, between the 1,400' and 2,400' levels and 800,000 tons of milling ore above the 1,400' level; also that "it is an inexorable law applicable to Mother Lode mines that enrichment takes place with depth."

Equipment: includes two compressors, 118' steel head-frame, double drum hoist, three 80-h. p. boilers, two 10' Pelton wheels. Waste water

from hoist and mill is stored in 75,000-gal. tank, before passing to compressor plant on the river, giving a 400' head.

Mill: with 100 stamps, weight 950 lbs.; includes 2 Blake crushers and Frue vanners.

Sierra mines: 11 claims, 200 acres, with 2,150' of tunnel workings, claimed to have 216,000 tons ore in sight, assaying \$3 to \$8 per ton. Further development work planned.

Inyo County mine: 3 claims, 60 acres, is a prospect said to cover 4,500' of a quartz vein 100' in width. Development merely by a 200' tunnel. Further development planned for 1917.

Management estimates gross earnings of \$4 per ton, with net returns of \$280,000 per year and "when the Sierra mines have been equipped with a new plant, the earnings should be (\$894,000 gross, \$415,000 net) in excess of 20% on the capital stock." This estimate is regarded as much too optimistic.

WESTERN MINING CO.

COLORADO

Subsidiary of the American Smelters Securities Co. Is an important producer of zinc carbonate ores from Big Chief, Maid of Erin and other mines through the Wolfstone shaft, Carbonate Hill, Leadville, Lake Co.

Production: in 1915 was 500 tons daily. In January, 1916, shipments had been reduced to 6,000 tons monthly, owing to depletion of ore reserves, but reported July, unwatering shaft to 1,000' level to get into sulphide orebodies. This work will also drain the Greenback mine and open up rich ground, idle for some years past.

WESTERN MINING & DEVELOPMENT CO., BRITISH COLUMBIA

An organization of Fred J. Rowland's of Spokane, Wash. Inc. July, 1915, intended to take over the Yreka group, Quatsino Sound, Vancouver Is., B. C., but succumbed to infantile paralysis.

WESTERN MINING & MILLING CO.

UTAH

Is a subsidiary of the Great Divide Mines Co., which see. **Office:** J. H. Hurd, sec., 219 Douglas Ave., Salt Lake City. Controlled by John B. Taylor, 1154 Downington Ave., Salt Lake City, Utah. A. B. Hirth, pres.; E. D. Haskins, v.-p.; W. A. Cooke, treas.

Inc. 1897 and reorganized 1905 in Utah. **Cap.**, \$300,000; shares \$1 par; assessable, with 2 assessments levied; issued \$200,000. Is a close corporation; having only 9 shareholders.

Property: 20 claims, 19 patented, 215 acres, in the Pine Canyon section of the Bingham district, on the western slope of the Oquirrh mountains. The claims are developed by numerous tunnels, and show the same limestone beds, cut by mineralized fissures, which have made the bonanza orebodies of the Utah Cons. and other properties on the east side of the range.

WESTERN NEVADA COPPER CO.

NEVADA

Property formerly held by this company is now a part of the Nevada Douglas Copper Co.'s property. Fully described in Vol. X, Copper Handbook.

WESTERN PACIFIC COPPER CO.

UTAH

Office: care Wilson Bros., Brooks Arcade, Salt Lake City, Utah. **Mine office:** Callao Juab Co., Utah. E. J. Yard, pres.; Jackson H. McCrystal, v.-p. and gen. mgr.; Elroy M. Clark, sec.-treas.

Lands: 320 acres, adjoin the Western Utah Copper Co., in the Willow Springs division of Deep Creek district, Tooele county, just over the Juab county line. The mine has a shaft and 2 tunnels, 400' and 1,200' long, developing ore averaging about 13% copper, 23% lead and 22% iron, with small silver and gold values. In 1914 a rich strike was reported in a south drift run from the bottom of the 250' shaft. The vein is said to be 15' wide and a 100-ton sample ran 24.4% copper. Occasional small shipments of ore have been made. **Equipment:** includes a steam plant and air compressor.

WESTERN RESERVE MINING CO.**MONTANA**

Office: Youngstown, O. **Mine office:** Basin, Mont. **Officers:** F. S. Merwin, pres.; C. Livingston, v.-p.; H. F. Duesinc, sec.-treas.; the foregoing and C. J. Burns, J. E. Richardson, A. F. Schontz, E. C. Welch, J. W. Kuhns, directors. J. H. Hildebrand, supt.

Inc. in Ohio. Cap., \$100,000; shares \$1 par; nonassessable; no bonded indebtedness; annual meeting, February 1. **Transfer office:** Youngstown, O.

Property: about 100 acres, 5 claims, 1 patented, at Basin, Jefferson Co., being developed for gold, silver, lead and copper. The quartz veins in granite strike E. W. and dip N. Pay ore occurs in large and small bodies as shoots and streaks showing sulphides.

Development: by 2,700' tunnel, greatest depth being 660'. **Equipment:** includes a steam compressor. Future work for the year includes driving 100' tunnel and erection of concentration plant. Developing in 1916.

WESTERN SLOPE COPPER MG. & SM. CO.**COLORADO**

Office: % H. F. Regal, 319 S. Main St., Butler, Pa. **Mine office:** Grand Junction, Mesa Co., Colo. J. S. Shaw, pres. and gen. mgr.

Inc. July 25, 1900, in Colorado. Cap., \$750,000; shares \$1 par; non-assessable. **Bonds:** \$50,000 authorized, at 6%; \$27,000 issued.

Property: 13 claims, 8 patented, 130 acres, with about 100 acres timbered, in the Unawep district, 23 miles S. E. of Grand Junction and 12 miles from Whitewater, the nearest rail point on the Denver & Rio Grande railroad. Shows granite and diorite, cutting sandstone and limestone. The claims have 6 fissure veins, 2 of them under development showing paystreaks 8" to 4' thick of bornite and chalcocopyrite ore, with malachite ore near the surface. Shipments of 17 carloads made some years ago, gave returns of 11 to 18% copper, 2 to 10 oz. silver and \$1 to \$5 gold per ton. **Development:** by 6 shafts, deepest 250', with 3 tunnels, longest 310', the mine having 1,686' of workings.

Equipment: includes a 50-h. p. steam plant, with a 40-h. p. hoist good for 1,000' depth, and 4 mine buildings. There is an old 50-ton matting furnace at the mine. The management plans reorganization and refinancing of company in 1916. Property considered promising.

WESTERN TUNGSTEN MINES CO.**COLORADO**

Albert Heyn and Frederick Davy, mgrs., Nederland, Colo. Has a lease on the Bonanza No. 1 mine on Wolf Tongue ground and on the Alaska lode.

WESTERN UNION MINING CO.**IDAHO**

Wallace, Idaho. **Officers:** D. H. Anderson, pres.; B. L. Collins, sec.; L. L. Woodford, treas.; D. H. Anderson, R. F. Collins, J. E. Burbank, G. W. Allen, W. Holm, W. Bjorklund, E. Hagnan, directors. E. Roberts, supt.

Inc. Jan., 1916, in Idaho. Cap., 2,000,000 shares; 10c par; 1,500,000 shares issued in exchange for stock in Aurora-Sampson and H. E. M. companies; 500,000 shares in treasury for future development.

Property: 30 claims of the Aurora-Sampson and H. E. M. companies near Wallace, in the Coeur d'Alene district. Owns the H. E. M. 100-ton concentrating mill at Wallace, which has a flotation unit using Naval Stores oils.

Development: aggregating 8,500' includes the H. E. M. lower tunnel, which at 2,300' and at a vertical depth of 1,000' encountered a large orebody in Aurora-Sampson ground. Drifts on the vein extend 800'. Values are lead and silver. The H. E. M. mine has 8,000' of underground workings. Management proposes active mining work and ore extraction.

WESTERN UTAH COPPER CO.**UTAH**

Office: 1020 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Irapah, Tooele Co., Utah. **Officers:** W. S. McCornick, pres.; Capt. Duncan Mac-

Vichie, v. p.-gen. mgr.; Herman H. Green, sec.-treas., with Henry Hornblower, John W. Weeks, Jas. J. Phelan and J. A. Coram, directors.

Inc. 1906 in Wyoming. Cap., \$2,500,000; shares \$5 par; non-assessable. **Debentures:** \$100,000 authorized Aug., 1911.

Property: the Gold Hill mine, 51 claims, 364 acres, patented, and a 340-acre ranch on Gold Hill, in the Clifton section of the Deep Creek district, some distance from Wendover, the nearest rail point, on the Western Pacific. The claims show a prominent iron gossan, with copper and lead streaks, with a 3' paystreak assaying up to 20% copper, 6 to 22 oz. silver, and \$11 to \$14 gold per ton. Development is said to show an orebody 60' wide and 600' long on the 150' level, that will average 5% copper. The mine is reported to have 100,000 tons of ore blocked out.

Development: includes a 600' shaft and a long tunnel, with upwards of 1 mile of workings, the tunnel showing a vein of about 20' width, of which a 5' footwall paystreak carries silver-lead sulphides, balance of vein being mainly iron oxide. Property considered promising.

The stockholders at a meeting July 14, 1916, voted to dispose of 50,000 shares treasury stock to provide funds to build a railroad from Wendover to the mine.

WESTERN ZINC CO.

UTAH

Has lease and is operating the Lakeview Mng. Co. (which see) property on Promontory Point, Utah.

WESTERN ZINC OXIDE CO.

COLORADO

Address: A. Hoffman, pres., Leadville, Colo. Formed in 1915 to take over and operate the plant of the Western Zinc Mining & Reduction Co., west of Leadville.

Employs the Wetherill process of producing zinc oxide by volatilization and collecting fume in flues. Capacity, 50 tons daily, to be increased, and roasting furnace added to handle sulphide ores as well as carbonates hitherto treated. Plant operated continuously during 1915.

WETTERHORN LAND CO.

MICHIGAN

Idle. W. H. Garlick, 990 W. Kensington road, Los Angeles, Cal., agent. **Lands:** 760 acres, in Secs. 21 and 22, T. 51 N., R. 42 W., Ontonagon county, shows 14 copper-bearing beds of 4 to 9' average widths, the most important being an 8' bed of cupriferous sandstone, carrying native copper and silver, said to have given assays of 2.6 to 6% copper and 1 to 6 oz. silver per ton. An amygdaloid opened by 84' shaft shows a small amount of copper.

WETTLAUFRER-LORRAIN SILVER MINES, LTD.

ONTARIO

Office: 61 Broadway, N. Y. **Mine office:** South Lorrain. **Officers:** H. Lockhart, Jr., pres.; D. M. Steindler, v. p.; E. H. Westlake, sec.-treas.; the foregoing and T. L. Herrmann, J. H. Susmann, W. J. Magavern, W. H. Clipsham, J. L. Mitchell, directors. R. Livermore, mgr.

Inc. Nov., 1908, in Ontario. Cap., \$1,500,000; \$1 par; non-assessable; outstanding, 1,416,590 shares. Annual meeting, fourth Monday in January. Bankers' Trust Co., New York, Trust & Guarantee Co., Ltd., Toronto, transfer offices. Security Transfer & Registrar Co., New York, registrar. Listed on New York curb.

Operations ceased in 1913, owing to exhaustion of ore, and efforts to find other bodies in the property are practically abandoned. Treasury contains about \$150,000 which will be used for prospecting and purchase of other property. Examination of other properties planned for 1916-17.

WHALE MINE

NEVADA

Goodsprings, Nev. **Officers:** T. A. Varden, mgr.; J. M. Hays, sec.; R. M. Salisbury, C. W. Whitley, L. Greene, trustees.

Property: the Whale mine, 6 unpatented claims, 120 acres, 8 miles W. of

Goodsprings, Clark county. The mine has deposits of zinc ore which occur in limestone and dip 45°, the pay ore being found in shoots 2' to 5' wide. Mine is worked by a 600' tunnel. Greatest depth of workings, 300'. The mine is still in development stage.

Equipment: includes 10" x 10" compressor. Shipment of carbonate ore in 1915 averaged 38% zinc.

WHEALKATE MINING CO.

MICHIGAN

Reginald C. Pryor, sec., Houghton, Mich. Nathan F. Leopold, pres.; R. R. Goodell, v. p.; Albert F. Leopold, treas. **Inc.** Nov., 1902, in Michigan. **Cap.**, \$50,000; shares \$25 par. **Property:** 240 acres, including the old Whealkate mine, on which a little misdirected work was done many years ago. Though primarily a land and town-site company, the company owns mineral lands in Sec. 17, which carry the southern extension of the Isle Royale and other cupriferous beds of the Keweenaw series. Did some diamond drilling, 1907; idle since.

WHIRLWIND CONSOLIDATED MINING CO.

UTAH

Office: 400 W. 7th S. St., Salt Lake City, Utah. **Officers:** Chas. Tyng, pres.-mgr.; Frank K. Nelson, sec.

Inc. April 24, 1916, in Utah. **Cap.**, \$250,000; shares 25c par; 300,000 shares in treasury. Listed on Salt Lake Exchange. Cash on hand, \$6,250.

Property: 7 claims, unpatented, 110 acres, in the American Fork mining district, 20 miles from a railroad, said to show silver-lead ore. **Development:** a 500' tunnel driven by former management, which is to be driven 2,500' more, to cut the Pacific fissure, 1916. A new tunnel started June, 1916, is expected to cut a vein 700' from portal. Installation of machinery and power is planned for 1916-17. Stock offered by W. H. Childs & Co. for 7c a share in May, 1916.

WHITCOMB MINING & MILLING CO.

ARIZONA

Office: 154 W. Randolph St., Chicago, Ill. **Mine office:** Tucson, Ariz. **Officers:** W. Sanson, pres.; J. C. Freeman, v. p.; T. A. Snow, treas.; A. McCallum, sec.; H. Whitcomb, gen. mgr.

Inc. March, 1914, in Ariz. **Cap.**, \$100,000; recently increased to \$200,000; shares \$1 par; non-assessable; all issued. No bonded indebtedness.

Property: 3 unpatented claims in the Pima district, 20 miles from Tucson. The increase of capitalization was for the purpose of acquiring 6 additional claims known as the Prosperity group. **Development:** by inclined shaft about 500' deep and stopes on 3 levels. Ore is a silver-lead-bearing quartz of milling grade. **Equipment:** includes a concentrating mill, shut down in 1915 for lack of water, but again operated in 1916. Company claims \$500,000 worth of ore developed on the two properties.

WHITE CAPS MINING CO.

NEVADA

Tonopah, Nev. **Officers:** A. G. Raycroft, pres.; C. F. Wittenberg, v. p., with H. R. Cooke and C. J. Blumenthal, directors. P. S. Booth, sec.-treas.

Inc. June 7, 1915, in Nevada. **Cap.**, \$200,000; issued \$132,110; shares 10c par. U. S. Corporation Co., New York, transfer office and registrar. Listed on New York Curb, in San Francisco and on the Nevada Exchanges.

Balance sheet of April 30, 1916, shows **assets:** property and equipment, \$248,069; cash, \$10,336; accounts receivable, \$5,712. **Liabilities** show surplus April 30, 1916, end of fiscal year, \$118,659; current liabilities, \$13,549.

Property: 2 claims, near Manhattan, Nye Co., Nev., said to show a vein of gold ore in limestone. **Development:** by a 310' vertical shaft with levels at 210' and 310'. Also an old 225' incline shaft. Two ore shoots opened in Aug., 1916, are reported to show 10' of \$40 ore, and 3' of \$124 ore, respectively. Ore below 210' level is said to carry primary sulphides. It "has hitherto presented many metallurgical difficulties, due to the presence

of antimony and arsenic. These difficulties have been satisfactorily solved, and a process worked out which will effect a good extraction at a low cost." No figures concerning such costs are given. Work in 1916 has been largely on the 310' level, searching for the downward extension of orebodies opened on levels above. **Equipment:** includes a 10-stamp mill and 75-ton cyanide plant; plans adding a roasting plant.

Production: is said to total 19,900 tons oxidized ore, average value \$19 per ton, all from above the 210' level.

WHITE CHIEF COPPER CO.

MONTANA

Mine near Jefferson Island, Mont. Lewis Schmuck, Mrs. Helen Schmuck and Ben W. Wilson, incorporators. Organized Sept., 1913. **Cap.**, \$1,000,000; shares \$1 par. **Lands:** 7 claims, in the Whitehall district, developed by a 600' upper and 100' lower tunnel showing copper-silver-lead-gold ore. A drift at depth of 82' disclosed a 5' vein, assaying 13% lead and \$14 gold. Development has been hampered by lack of working capital.

WHITE GULCH MINING CO.

CALIFORNIA

Office: 263 Twelfth St., Oakland. C. C. Powning, supt., Bagby, Calif. **Property:** the Virginia Quartz mine, 8 miles from Bagby, Mariposa Co. The vein varies from a seam to many feet in width with serpentine footwall and diabase hanging-wall. **Development:** 650' shaft, with 4 levels, 250' drifts, 350' raises and 250' winzes. **Equipment:** includes a Fairbanks-Morse hoist and 35-h. p. motor; 50-h. p. Ingersoll-Rand compressor; 3 miles of power line; track, cars, pipe, buildings, etc. Also a ten-stamp mill with crusher and amalgamating plates and 50 h. p. gas engine. Company started operations in 1912, employing 15 men; no recent information.

WHITE KNOB COPPER & DEVELOPMENT CO., LTD.

Address: Mark M. Salomon, treas., 43 Cedar St., New York. Mining property was the White Knob mine, at Mackay, Custer Co., Idaho, now owned by the **Empire Copper Co.** For further details of this company and its predecessors, see Vols. IX and X, Copper Handbook.

Cap., \$6,000,000; \$4,000,000 common and \$2,000,000 7% cumulative preferred stock. Company is a holding company controlling through ownership of \$1,200,000 of the capital stock, the **Argonaut Consolidated Mining Co.**, a dividend payer, at Jackson, Calif., which see. **Dividends:** were resumed in 1914, with payments of 25c per share on preferred stock, Nov., 1914; 10c in Feb. and May, 1915, and 10c Feb., 1916.

WHITE OAKS MINES CONSOLIDATED, INC.

NEW MEXICO

Office: Room 45, 45 Broadway, and 500 Fifth Ave., New York. **Mine office:** White Oaks, N. Mex. Richard Wightman, pres. **Inc.** in New York. **Cap.**, 200,000 shares; \$5 par. Traded in on New York curb. U. S. Corporation Co., 36 Nassau St., New York, registrar and transfer agent.

Property: about 300 acres in the White Oaks district, Lincoln Co., including the Old Abe mine, the North and South Homestake and the Welen claims, worked in the past for gold; also coal lands. Company claims in its literature to have produced 10 tons tungsten ore and concentrates per month since July 1, 1915.

Equipment: includes electric hoists, 2 stamp mills, and concentrating plant equipped with 5 Joplin hand jigs and one Richards jig.

In May, 1916, the stock sold up to \$16 per share; in June, the price broke from \$11 to \$5. Reported July, 1916, that "internal dissension arose in the White Oaks Co.'s management, and rather elaborate plans for reopening the mines have apparently been abandoned."

WHITE PINE COPPER CO.

MICHIGAN

(Subsidiary of Calumet & Hecla Mng. Co.)

Office: 12 Ashburton Place, Boston, Mass. **Mine address:** Ontonagon,

Ontonagon Co., Mich. **Officers:** R. L. Agassiz, pres.; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.; Jas. McNaughton, v. p.-gen. mgr., preceding with D. S. Dean, Benj. Joy, F. L. Higginson, J. M. Longyear and E. V. R. Thayer, directors. Thos. H. Wilcox, supt.

Inc. 1909. Cap., \$5,000,000; shares \$25 par; in 150,000 common shares and 50,000 5% cumulative preferred shares; issued 85,320 common and 34,759 preferred. Is controlled by the Calumet & Hecla Mng. Co., through ownership of 34,259 shares of preferred stock and 42,602 shares of common stock.

Annual report for 1915 gives balance of quick assets, \$139,786, compared with balance of liabilities Dec. 31, 1914, of \$134,559. Mine expenses were \$705,473 and receipts \$979,818; \$518,318 from ore sales and \$461,500 from sale of 18,460 shares preferred stock at par (\$25).

Property: the White Pine mine and surrounding lands, formerly owned by the Keweenaw Association and others. The White Pine mine, 80 acres, is in Sec. 5, T. 50 N., R. 42 W., 3 miles E. of the Nonesuch mine at the extreme south end of the Keweenaw mineral belt. The other property was paid for by stock. A 9 mile railroad line connecting the property with the Chicago, Milwaukee & St. Paul R. R., was completed in Dec., 1915.

Geology: property as a whole shows eruptive rocks with interbedded sandstone and conglomerates of the Secondary Keweenaw series. It also holds what F. E. Wright called epidote veins which are epidotal melaphyr crossing the face of the cliffs parallel to the sandstones, but showing evidence of faulting and crushing. There is also a second set of minor, nearly vertical epidote veins which, unlike the first, are barren of copper. The sandstone beneath the melaphyr is a fine-grained, dark red, almost quartzitic rock that is jointed and has numerous calcite veins and occasional threads of malachite which extend down a few feet from the contact. The rock is, however, usually concealed by talus from the cliffs. Native copper also occurs in a very fine-grained sandstone-conglomerate, which is said to run from 5 to 10%. The dip of the bedded formation is towards the S. E., varying from 8 to 35°. The so-called Nonesuch formation consists of 2 parallel beds of sandstone running from 4 to 8' in thickness and separated by a 5' bed of slate. The entire copper-bearing ground has a width of about 40'. The beds carry considerable finely disseminated native copper which is as a rule very flaky. This formation is badly faulted and in the mine is reported to have been thrown so that the payable lode abutted directly against the unpayable one. Besides the 2 veins described, there is a third which lies about 45' back in the footwall.

Development: includes 4 shafts; No. 2 temporary shaft was 183' deep and had 3,926' of openings, Jan. 1, 1916. It connects with the old White Pine shaft. The main working shaft (called No. 3), located between the two temporary shafts (Nos. 1 & 2), is an incline 1,090' deep, with 5,336' of underground workings, Jan. 1, 1916. It is equipped with 5-ton skips.

The No. 4, an inclined shaft west of No. 1 shaft, is sunk in the hanging at a considerable distance above the lode. On Jan. 1, 1916, it was 977' deep and had 10,275' of underground workings. It is also equipped with 5-ton skips. New workings totaled 8,605' in 1915; 4,721' in 1914, and 2,909' in 1913. The rock is soft and can be mined and crushed cheaply. The property has been extensively diamond-drilled, more than 110 holes having been made since work was begun in 1907.

Equipment: includes a power plant and compressor at the mine. A 750-k. w. electric turbine on Iron River, 1½ miles from the mine and mill, supplies water for the mill.

In 1915 a 1,000-ton mill was completed and put in operation. Instead of the steam stamps common in the Lake Superior copper country, it is

equipped with gyratory crushers, rolls and Hardinge mills. Concentration is effected on Wilfley tables and the tailing saved, as future regrinding and leaching will undoubtedly be used in reclaiming the copper content. The mill is near the working shafts and connects with them by means of trestles over which rock is transferred from the shaft rockhouses to the crushing plant at the mill. An extraction of but 67% is being made at present, the copper lost in the tailing consisting partly of sulphides, but mostly of fine flaky particles of native copper.

Production: last 8 months of 1915:

	Tons R'k Treated	Lbs. Cu. p. T.	Mine Cost p. T.	Lbs. Cu. Prod.	Cost per Lb.	Rec'd per Lb.
1916 (6 mos.)	3,446,425
1915114,039	24.76	\$2.182	2,824,145	16.64c	18.353c

Mine costs include mining, transportation, stamping and taxes per ton of rock treated.

Property is decidedly promising and a long life assured by discovery in diamond drill work of high-grade rock at 2,100' depth.

WHITE PINE EXTENSION COPPER CO.

MICHIGAN

Offices: 15 William St., New York, and Pinex, Ontonagon Co., Mich.
Officers: J. R. Stanton, pres.; Angus Smith, v. p.; preceding with R. D. Jones, Jas. S. Dunstan, Henry Ledyard, directors. Geo. W. Drucker, sec.; Theodore Dengler, mgr.; Wm. H. Bolly, supt. Edw. Roscollia, mine capt.

Inc. June, 1915, in Mich. **Cap.**, \$3,750,000; shares \$25 par; assessable; in treasury, 65,000 shares.

Property: 1,400 acres mineral land in the White Pine district, Ontonagon Co., 5 miles west of the White Pine property of the C. & H. Mng. Co. The company owns the leases and exclusive mining rights for 50 years, paying a sliding scale royalty. These leases were purchased from S. L. Smith of Detroit, and associates, who received 60,000 shares of stock in payment for their lands and the development work done prior to June 1, 1915.

The property is similar to that of the White Pine Copper Co. in that it shows sandstone and soft shales and slates. Considerable copper glance was found during diamond drill exploration work, the copper in the core of one hole showing glance only, no native copper being present.

Development: little underground work has been done, but a thorough diamond drill development is nearing completion. It consists of one line of holes, spaced 1,000' apart, which cut the copper-bearing beds about 400' below the surface and on their dip; a second line of holes similarly spaced, cut the beds about 600' in depth; the third line of holes, also 1,000' apart, cut the beds at a depth of 1,100'. The second line was located half way between the holes of the first; the third line holes were put down 250' from those of the second line. When the drilling is completed there will be a line of holes along the strike at intervals of 250', 250' and 500', repeating the sequence. Drilling completed in 1916, has disclosed very uniform values for a distance of 4,000' along the strike of the formation and at an average depth of 300'. The first of the five shafts planned was started in April at the eastern end of the property. It will be vertical and have 3 compartments.

Concentration will undoubtedly be by means of the flotation system, experimental work showing possibilities of an 80% extraction. A temporary mill will be built in 1916 and the property should enter the producing class some time during the year.

Outlook for the property is especially good and the management capable.

WHITE STAR MINING CO.

UTAH

Idle. Office: 408 South State St., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. Richard B. Shepard, pres. and gen. mgr.; P. A.

Sörenson, v. p.; Emma C. Shepard, sec.; Bernard Rich, treas., and Harry Rich, directors.

Inc. 1898, in Utah. **Cap.**, \$30,000; shares 10 cts. par; assessable; with several assessments levied. **Property:** 4 claims, patented, 80 acres, 3 miles from Eureka, the nearest rail point. The mine has a 100' shaft and 100' tunnel.

WHITEHALL MINING, MILLING & DEV. CO. MONTANA

Whitehall, Mont. **Officers:** T. T. Gates, pres.; N. D. Root, v. p.; C. W. Hatch, sec.; with Edw. Ryan, Jesse Johnson, L. B. Knight, R. Edwards, J. M. Borden and Jas. Ryan, directors.

Inc. June, 1914, at Whitehall, Mont. **Cap.**, \$500,000; shares \$1 par; 200,000 shares in treasury; 250,000 shares were given for the mining property.

Property: 5 claims, about 3 miles N. E. of Whitehall, Jefferson Co., is reported to have an orebody 36' wide from which shipments have averaged \$16 per ton.

WHITLATCH MINE MONTANA

Owned by C. W. Young, Chicago, Ill. Worked since 1912 under lease by Sherman Bros. (H. C., A. R. & Wm.), of Helena, Mont. The mine, 3½ miles south of Helena, Mont., located in 1864 and operated intermittently to date, has been a good and profitable gold producer. The mine carries silicious gold ore, containing small silver values and is developed by a 500' shaft; recent work is mostly between the 400' and 500' levels. **Equipment:** includes tramway, compressor, pump and hoist. Only 5 stamps of the 20-stamp mill and cyanide plant are at work in 1916, handling both Whitlatch and custom ores.

WICKES-CORBIN COPPER MINING CO. MONTANA

Office: Union Bank Bldg., Helena. **Officers:** S. A. Balliet, pres.; A. Major, v. p.; L. C. Henry, sec.-treas.; foregoing with N. Salvail and T. A. Grimes, directors.

Inc. July 9, 1907, in Mont. **Cap.**, 5,000,000 shares; 10c par; non-assessable; outstanding, 3,633,711. Annual meeting, June 3.

Property: 7 unpatented claims, 110 acres, 20 miles S. of Helena, and a half mile S. of Wickes, Mont. The claims show N.-S. fissure veins cutting granite, aplite, andesite and dacite. The ores carry gold, silver, copper and zinc values. **Development:** by Bunkerhill tunnel, 1,030' long and Tulare tunnel, 700'. Total workings, about 2,000', greatest depth, 350'. Developing, in 1916, and ore being mined by lessees.

WIG MOUNTAIN MINING & MILLING CO. UTAH

Officers: George A. Storrs, pres., American Forks, Utah. George A. Brown, v. p.; J. W. Storrs, sec.-treas., John Curzon and Jos. Thurgood, directors. **Inc.** May, 1916. **Cap.**, \$1,000,000; shares 1c par.

Property: the Jumbo group, 7 claims, on Wig mountain. Is a prospect which is to be developed, 1916-17.

WILBERT MINING CO., LTD. IDAHO

Office: 222 Kearns Bldg., Salt Lake City, Utah. **Officers:** A. S. Ross, pres.; H. S. Knight, v. p. and mgr.; C. Wamock, sec.-treas.

Inc. in Utah, 1907. **Cap.**, \$1,000,000; shares \$1 par; assessable; all issued. Annual meeting, May. Stock transferred at company's office. Listed on Salt Lake Stock Exchange.

Dividends: \$10,000, Nov. 15, 1915; \$10,000, Feb. 15, 1916; \$10,000, May 15, 1916.

Receipts for year ending May 1, 1916, were \$251,940 and disbursements, \$209,472, leaving \$42,468 cash in bank. Received from ore sales, \$223,382.

Property: 16 patented claims, in the Dome mining district, 40 miles from Arco, Fremont Co. The claims carry a fissure vein in Cambrian quartzite

that contains lead and silver ore, mostly of concentrating grade. The top of the vein has been folded into a nearly horizontal bed, worked by quarrying. The main ore-shoot has been followed to a depth of 600', and is stoped out from No. 5 level to the surface, May 1, 1916.

Equipment: includes a 100-ton concentration mill. In the annual statement value of the mill is placed at \$65,000, and that of the mine plant, \$50,000.

Production: for year ending May 1, 1916, was 15,204 tons crude ore, said to assay 25% lead and 3.86 oz. silver, which yielded by sorting and concentration, 5,787 tons, assaying 52% lead and 8 oz. silver. Costs were \$3.56 per ton. Shipments average 300 tons monthly.

WILLARD MINES CO.

NEVADA

Lovelock, Nev. **Officers:** F. H. Bird, pres.; J. T. Goodwin, v. p.; R. Nenzel, sec.; V. A. Twigg, treas., with L. A. Friedman, D. C. Wheeler, directors. H. H. Hunter, mgr. and supt.

Inc. in Nev. Cap., \$1,000,000; shares \$1 par; non-assessable; outstanding, 662,000. No bonded indebtedness. Annual meeting, third Wednesday in January.

Gross earnings for 1915, \$1,466, from the sale of ore from development work only. Shipments averaged \$54 per ton in gold and silver.

Property: 3 unpatented claims, 8 miles E. of Lovelock, Humboldt Co., Nev., which show a vein carrying pay ore in shoots. **Development:** by several shafts, deepest 50', and a 70' tunnel. Active development planned in 1916.

WILLIAMS LUMAN MINING CO.

WYOMING

Address: care W. J. Thom, cashier First Nat'l Bank., Buffalo, Wyo. **Mine office:** Depass, Fremont Co., Wyo. L. R. Vanhouten, pres.

Inc. May 2, 1908, in Wyoming. Cap., \$2,500,000; shares \$1 par; issued 2,385,000 shares.

Property: 9 claims, patented, 130 acres, 16 miles from a railway, in the Copper Mountain district, shows 8 fissure veins in granite, diorite and altered schists. The main vein, a zone 50 to 60' wide, traceable 3,400', in much altered, crushed and fissured diorite, has a 2' paystreak carrying free gold, copper ore, and native copper in thin sheets and nuggets, ore minerals being cuprite, melaconite, malachite and chalcocite. Ore is reported to assay 10% copper, 5 to 10 oz. silver and \$2 to \$8 gold per ton.

Development: by an 820' shaft, showing sulphides on the 800' level, with 2,000' of workings. There also are tunnels of 513' and 300'.

Equipment: includes an 80-h. p. gasoline plant, with a 15-h. p. hoist and a 2-drill compressor. Electric current is taken, over a 16-mile transmission line, from the Asmus Boysen dam. The company is operated as a close corporation, money for development having been furnished by about 10 shareholders only. Idle since 1912, for lack of funds. Property favorably regarded, but needs railroad transportation.

WILLIE ROSE CO.

ARIZONA

W. B. Wright, mgr. **Property:** the Willie Rose mine, near Triangle Springs, 13 miles S. of San Simon, Ariz., operated under 10-year lease from 1914. Developed by 124' shaft said to be bottomed in a 12' vein carrying slightly argentiferous chalcocite, of about 2% copper tenor. Ore occurs in lime-porphry contact, veins running E.-W., showing copper glance at slight depth. Was developing with a small force at last reports. Has made several shipments of \$12 per ton ore to the El Paso smelter. **Equipment:** includes hoist, oil engine, compressor and air-drills.

WILLOW CREEK MINES CO.

ALASKA

Address: Doherty & Thompson, Knik, Alaska. Company leases and

operates the Gold Bullion mine, one of the largest gold producers of the Willow Creek district. Five stamps were to be added to mill in August, 1916.

WILLOW CREEK MINING CO.**MONTANA**

Address: P. H. McDermott, chief owner, Helena, Mont. Owns the Mountain Meadow group, 4 miles from Pony, Madison Co., Mont., on Willow Creek. Mine shows a 12' fissure vein in granite carrying free gold with pyrite and chalcopyrite, both with gold values, in quartz gangue. Has a small mill. Regarded as promising.

WILLOW VALLEY MINING CO.**CALIFORNIA**

Office: 443 Holbrook Bldg., San Francisco. **Mine office:** Nevada City, Calif. **Officers:** M. Dozier, pres.; J. L. M. Shetterley, v. p.; C. E. Reith, sec-treas.; A. W. Hoge, C. F. Kinsey, R. W. Bender, directors. A. W. Hoge, supt.

Inc. May 18, 1915, in Calif. **Cap.,** \$1,000,000; shares \$1 par. Annual meeting in May.

Property: 9 claims, 4 patented, 125 acres, in Nevada City district, Nevada Co., has several veins, containing gold and silver ore, which occur in granodiorite and slate and dip from 20° to 70°. Developed by shaft and tunnel to depth of 800'. **Equipment:** includes electric power, compressor, pump, tramway, stamp-mill, etc. Developing only at present.

WILMOT MINING CO.**MICHIGAN**

Office: 990 W. Kensington Rd., Los Angeles, Cal. Mine near Ontonagon, Mich. W. H. Garlick, pres.; W. B. Goucher, sec. **Inc.** in Michigan. **Cap.,** \$500,000; shares \$25 par. Paid dividends of \$17,000, from sale of timber lands, with mineral rights reserved, and has received \$1,500 from assessments. Owns mineral rights to 3,520 acres in Ontonagon county. No mining done.

WILSHIRE BISHOP CREEK CO.**CALIFORNIA**

Bishop, Kern Co., Calif. Operates a mine owned by Rocky Point Cons. Mines Co., which see. Has 50-ton mill to be increased to 100 tons per day. Property reported on by E. W. Walter, Oct., 1915.

WILSON CONSOLIDATED MINING CO.**UTAH**

Offices: 208 Brooks Arcade Bldg., Salt Lake City, Utah, and Wendover, Tooele Co., Utah. Clyde H. Wilson, pres.; Frank L. Wilson, sec-treas.

Property: located in the Clifton district, Deep Creek Mts., Tooele Co., 45 miles from Wendover, was the only mine in the U. S. which shipped bismuth ore in 1914. Reported to have shipped one 25-ton lot of bismuth ore carrying gold and silver, and assaying 8% bismuth. Ore was hand jigged to bring shipment up to 20%.

WILSON MINES CO.**MISSOURI**

Webb City, Mo. **Cap.,** \$10,000. **Dividends:** 10% in April, 1916, 5% May 1. Stock held mainly in Milwaukee, Wis.

Operates, under lease, 150 acres of land of the Boston Duenweg Mining Co., Webb City, Jasper county. In 1915, developed extensive orebodies by drilling, operated 2 shafts and produced the bulk of the output of Boston-Duenweg holdings. Has invested \$30,000 in plant, capacity 500 tons daily.

WILSON MINING & SMELTING CO.**MONTANA**

Address: William Burke, pres.-mgr., Saltsee, Mont. A Burke, v. p.; A. W. Dougherty, sec. and treas.; M. Hays and G. Early, directors.

Developing 2 groups of claims on Silver and Big Thunder Creeks, about 2 miles from Saltsee, Missoula Co.; 6 claims on a lead-silver vein form one group, 8 claims showing a shoot of copper, the other group. Work in 1916 comprises a drift from Silver Creek on the copper vein. Commercial lead ore is reported in an upper tunnel.

WINGFIELD MINING CO.**MISSOURI**

Webb City, Mo. Inc. in Missouri. **Cap.**, \$32,000; investment, \$48,222. Operates, under lease, 50 acres sheet-ground lands of Scott, Bowman & Ware, working through 3 shafts. Capacity, 1,000 tons daily. Mill equipment includes Webb City crusher and 4 tables.

WINNEMUCCA MOUNTAIN MINING CO.**NEVADA**

Winnemucca, Nev. **Officers:** Victor C. Alderson, pres.-gen. mgr.; W. G. Adamson, sec.-treas.; John R. Turner, supt.; Roscoe F. Allen, asst.

Cap., \$2,000,000; shares \$1 par; outstanding \$1,200,000; non-assessable; no bonded indebtedness.

Property: 25 claims, 2 patented, 7 miles from Winnemucca, Humboldt Co., including 9 claims owned by the Winnemucca and Bonanza companies now merged with the present organization. The claims show a N. E.-S. W. fissure vein, traceable through the property for 3,000'. This vein cuts shale intruded by dikes of diorite and andesite. The orebody varies from 3' to 30' in width, and ore carries gold and small silver values. 3,000 tons of ore on the dump is said to average \$15.

Development: by 5,000' of tunnel work. The working tunnel, 425' long, enters a fault zone at a point 29' below an ore-shoot 175' long and 30' wide. The work defines 15,000 tons of indicated ore said to average \$15 per ton. **Equipment:** includes electric hoist, compressor and a 50-ton cyanide mill. Property is a prospect.

WINNIE-LAWSON ZINC CO.**MISSOURI**

Highly advertised in the Joplin papers January, 1916, as an "investment offering of great significance and importance." The company claims to have under lease, 270 acres of land in the "most promising portions of the southwest lead and zinc district," and that it has let a contract for a 400-ton mill. Edward Lawson is the promotor. No reports of big undertakings on the part of this company have come from outside sources.

WINONA COPPER CO.**MICHIGAN**

Office: 705. Sears Bldg., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich. **Officers:** Chas. J. Paine, Jr., pres.; Geo. P. Gardner, v. p., with W. A. Paine, Walter Hunnewell, Jas. H. Seager and W. Cameron Forbes, directors. W. E. Coe, sec.-treas.; Rex R. Seeber, supt.

Inc. 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; increased 1911 to \$5,000,000; issued 166,667 shares, fully paid. Last assessment of \$1 was paid July 2, 1914. The Company 1911 acquired the property of the King Philip Copper Co., issuing 166,667 shares of Winona stock therefor. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, last Tuesday in March. Company ended 1915 with surplus assets of \$223,324.

Property, 2,608 acres, with timber rights to 1,768 acres additional, lying 3 to 5 miles S. of the mine.

Geology: the main tract carries the outcrop of the Winona amygdaloidal bed for about 2 miles. The mine was discovered 1864, by a line of old Indian pits along the outcrop, and a single shallow shaft was sunk, but owing to entire lack of transportation facilities little was accomplished. The property was leased in 1880 and worked for mass copper, but did not pay and was closed, until the present company began work April, 1898, when the old shaft was cut down, retimbered and deepened, and 3 new shafts sunk. The Winona bed is an amygdaloid of 12' minimum, 20' average and 46' maximum width, striking N. 59° E., and having an average dip of about 70°. The Winona amygdaloid greatly resembles both the Baltic bed and the Knowlton bed of the Evergreen belt, carrying considerable epidote, calcite

and quartz, with a limited amount of both mass and barrel copper, though the bulk of the metal occurs in stamp rock. Diamond-drill borings have located several other cupriferous beds on the Winona tract, all lean where cut. The mine is on a spur of the Copper Range railway.

The older workings show mineral of the lighter grades, with somewhat heavier copper at depth.

Development: No. 1, the discovery shaft, has 3 compartments, is 400' deep, with 4 levels opened, which show a little heavy copper and some stamp rock in the northern drifts, but is of little promise and has been idle since 1901.

No. 2 shaft is 1,000' deep, with 9 levels opened, showing good copper at depth of about 200', but with poor ground below, and has been idle since early 1906.

Old No. 3 shaft, 750' deep, has been idle for years.

New No. 3 shaft, 1,650' S. W. of No. 2, is bottomed at the 13th level. The 3d to 10th levels, inclusive, have been extended to No. 4 shaft at depth of 1,272' showing alternations of good and poor ground. The openings, as a whole, show rock carrying 12 to 15 lbs. fine copper per ton, allowing for judicious stoping and reasonable selection of ground broken. Underground work in 1915 consisted of stoping and cutting out, and 113' of drifting on the 6th level of No. 4 shaft.

Equipment at No. 3 shaft includes a steel shaft rock house, equipped with two 18"x24" crushers, pneumatic steel gates, and pneumatic trolley cranes.

No. 4 shaft, about 1,700' S. W. of No. 3 is down to the 15th level. The shaft is sunk in the footwall and was opened by sinking and raising simultaneously. Underground work has been confined to stoping for the past year. Connection is had with the King Philip workings on the 5th, 7th, 8th, 9th, 10th and 12th levels.

No. 4 shaft is equipped with a modern steel shaft rock house, having a cylindrical main bin of about 40' diam., built of heavy steel plate and a 24x36" Portage Lake-Farrell crusher.

The hoist at No. 4 shaft, about 1,700' from the central plant, and good for 1,500' depth, operates two 3-ton skips, working in counterbalance, at a speed of 1,200' per minute.

King Philip No. 1 shaft, about 1,400' S. of Winona No. 4 shaft, is 14x25' in size, sunk about 85' in the footwall, at an angle of 70°, and is temporarily bottomed at the 14th level. The lode shows a width of 20 to 25', and carries considerable epidote.

King Philip No. 2 shaft is 2,780' S. of No. 1, on the southern side of Sleeping river, and 3,400' from the southern boundary of the tract. This shaft, temporarily idle, also sunk in the footwall, is 1,108' deep, with cross-cuts on the 6th, 8th and 10th levels, to the Winona bed, which gives a fair showing, about the same as in No. 1, with which it has underground connection on the 8th level.

King Philip No. 1 has a shaft house completed in May, 1916, which allows a 35% increase in output. No. 2 shaft has an isolated steam hoisting plant.

The power plant equipment at No. 3 shaft includes an Allis-Chalmers 250-kw. 3-phase 60-cycle 2,300-volt cross-compound a. c. generator. The equipment at No. 4 shaft includes a motor-generator set which has a 450-h. p. 3-phase 60-cycle 2,080 volt variable speed induction motor, at 600 r. p. m., connected on either side by flexible couplings, to two 20-ton fly-wheels, 10' in diam. The motor-generator set has 2 bearings of 11x33", and 2 bearings of 9x27" with oil pumped through them at the rate of 16 gals. per minute.

automatically filtered and water-cooled, insuring perfect lubrication. A 150-kw. motor-generator operating the electric locomotives, transforms a 2,200-volt alternating current into a 500-volt direct current. There is a 25-drill Nordberg air compressor in the central power house, and steam is provided by three 270-h. p. water-tube boilers, operated at 175 lbs. initial steam pressure.

The King Philip boiler house has a battery of two 300-h. p. Parker tubular boilers. The 34x40' power house has a 50-drill Nordberg 3-stage air compressor.

Mine buildings include a carpenter shop, machine shop, smithy, warehouse, office building, 2 boarding houses and about 150 dwellings for employees. There also is a sawmill, with wing for boilers, and a wing containing a shingle mill, the plant having a daily capacity of 20,000' of sawed lumber.

The mill: built at a cost of about \$300,000, is located near No. 4 shaft, thus saving about 13 cts. per ton in transportation charges. The mill secures its water from the Sleeping river, across which a dam has been built, with a storage capacity of 150,000,000 gals. Careful hydrographic surveys for 3 years show that the watershed tributary to this river yields about 3,000,000 gals. per day, which is enough for the mill. The item of 13 cts. per ton transportation charges saved by the new mill may seem small, at first sight, but it actually means about 1 ct. per lb. on the cost of finished copper, and may mean the difference between success or failure, so closely are costs and income adjusted in a low-grade Lake Superior copper mine. The custom for many years past has been to put Lake Superior mills some miles away from the mines, on large bodies of water, but in the case of the Winona, the management has had to consider costs rather than the easier solution of its milling problem.

Rock, brought to the mill by electric locomotives, is crushed in 2 Allis-Chalmers stamps, 1 a simple head having a 24" cylinder, and 1 a steeple-compound head with 16" and 32" cylinders. Equipment includes 6 Hardinge conical tube-mills, 60 Wilfley tables and 12 settling tanks. Under the wash floor there are 6 large settling tanks for the wash water, which is reused after clarification. Tailings are carried by belt-conveyor for a distance of 321' from the mill, and delivered at a height of 123' above the ground, forming a great hill of waste at hand for retreatment at some future time. Slimes are delivered by a 1,200' steel launder to a ravine beyond the sand discharge. Company employs about 300 men.

Production: 1902, 101,188 lbs. copper; 1903, 1,036,944 lbs.; 1904, 646,024 lbs.; 1905, no production; 1906, 278,182 lbs.; 1907, 1,285,863 lbs.; 1908, 1909 and 1910, no production.

Recent production:

	Tons R'k. Stmpd.	Mineral Lbs.	Lbs. Copper		Ref. Copper Produced Lbs.
			per Ton Rock	Rec. per Ton R'k	
1915	102,594	3,032,045	29.55	16.79(a)	1,722,638
1914	123,339	2,239,170	18.15	10.96	1,352,085
1913	120,806	2,467,460	20.42	11.99	1,448,737
1912	181,148	3,586,520	19.79	12,738	2,307,237
1911	97,445	2,533,870	26.00	13.091	1,275,675

(a) Higher recovery due to closer selection of rock stamped. Copper was sold at 17.4 cts. per lb. in 1915.

In Aug., 1914, the mine was shut down on account of the low price of copper. In Oct. work was started by lessees, the rock being shipped to the Centennial-Allouez mill, until Jan. 1, 1915, and after this date to the Tri-

mountain mill, and continued until the Spring of 1915. In June, the company started work, sending the mine output to its own mill.

The Winona has made various separate campaigns of production; on several occasions the percentage of copper extracted ran down to unpayable figures, returns averaging 18.95 lbs. fine copper per ton of rock stamped in 1904, 14.34 lbs. in 1906, and 12.59 lbs. in 1907. The average yield in 1914 was only 10.96 lbs. fine copper per ton of rock stamped.

Winona's rock averages 20 lbs. of copper per ton, but the copper is light and flaky and the mill has never been able to make adequate recovery. A great deal of experimental work has been done in an attempt to solve the problem. The method finally determined upon, and being tried out at present, is the Slater ferric-chloride process. Results indicate that when it is made continuous instead of treating the ore in batches it will be the solution to the problem.

Development: underground is much better to the S. of the property than in the original workings to the N., and the mine has been extensively opened, with a large tonnage of rock available for stoping. Notwithstanding the unsatisfactory results secured thus far, the Winona is considered to have very fair chances of making a successful low-grade mine, with profits depending upon copper selling at 15 cts. or over. The management is efficient and resourceful.

WINONA GOLD-COPPER MINING & MILLING CO. WYOMING

Office: 111 Market Ave., S., Canton, Ohio. **Mine office:** Painter, Big Horn Co., Wyo. **Officers:** L. Cavnah, pres. and gen. mgr.; Geo. House, v. p.; Dr. J. H. East, 2nd v. p.; Wm. H. McAloney, sec.-treas., at last accounts. **Inc.** 1903, in Wyoming. **Cap.**, \$5,000,000; shares \$1 par; fully paid. Management was changed and company practically reorganized Dec. 12, 1905.

Property: 25 claims, unpatented, 440 acres, in the Sunlight basin, on Silver creek, in Bear Tooth and Sulphur mountains, in the N. W. corner of Big Horn county, about 12 miles E. of the Yellowstone National Park. Claims show granite, porphyry and andesitic breccia, carrying 6 fissure veins with shoots of low-grade copper ore. The ores carry chalcopyrite and chalcocite and are reported to average 7 to 8% copper with about \$3 gold per ton. The principal veins in andesite are known as the Bluff, Malachite and Greenhorn. The Bluff vein is said to be 25' wide with a 12' paystreak of copper ore. The Malachite vein, 10 to 25' wide, has a paystreak of high-grade copper ore, 1½' wide at surface, increasing to 5' at depth.

Development: by 2 tunnels, the lower or main working tunnel, 804' long. Total workings, 1,032'. **Equipment:** includes steam and electric power plant and 10 buildings.

WISCONSIN MINING CO.

IDAHO

Kellogg, Shoshone Co., Idaho. **Officers:** Louis Bolduc, pres.-treas.; P. Mason, v. p.; J. S. Ross, sec. **Directors:** Louis Bolduc, P. Mason, J. Bolduc, F. Jones and J. W. Thompson.

Inc. 1912. **Cap.**, \$1,500,000; shares \$1 par. Company is practically the successor of the Gold Leaf Consolidated Mines and the Coeur d'Alene Consolidated Mining Co., the shares of the old companies being made transferable share for share in the new company, upon payment of back assessments.

Property: 4 claims, unpatented, 2½ miles east of Kellogg, has 800' of tunnels and crosscuts and one 90' vertical shaft, developing a vein of 5 to 6' width, carrying copper ore and a little lead. **Equipment:** includes a 2-drill compressor, run by water power from Moon creek, and a hoist. Development work only was done in 1915.

WISCONSIN MONTANA MINING CO.**MONTANA**

Office: Downing, Wis. **Mine office:** Superior, Missoula Co., Mont.
Officers: A. O. Nichols, pres.-gen. mgr.; D. McDonald, v. p.; C. C. Coolidge, sec.; Dr. P. A. Beebe, treas. and R. A. Cleveland, directors.

Inc. Jan. 29, 1906, in Wisconsin. Cap., \$50,000; shares 5 cts. par.
 Annual meeting 1st Tuesday in February.

Property: 16 claims, 320 acres and a 5-acre mill site in T. 15 N., R. 25 W., 1 mile from the Missoula river and about 10 miles east of Superior. Claims show fissure veins cutting through limestone, slate and quartz; one reported as 70' wide, with a 7' paystreak carrying azurite and chalcopyrite ore giving assays of 2 to 3% copper, with gold-silver-lead values.

Development: by tunnels of 40', 400' and 710' length, with about 100' of other laterals. Idle.

WISCONSIN ZINC CO.**WISCONSIN**

A subsidiary of the American Zinc, Lead & Smelting Co., which see.
Address: H. C. George, gen. mgr., Galena, Wis. Owns the East End, Winkskill, Champion, Longhorn, Thompson, Federal and Birkbeck mines, in the Benton, Wis., district. Also has roasting plants at Galena and New Diggings. The latter plant contains 7 Skinner hearth furnaces, 20' diam., preparing ore for magnetic separation of marcasite from zincblende. Crude ore averages 2.8% zinc.

WOLF MOUNTAIN COPPER CO.**UTAH**

S. A. Holmes, sec., P. O. Box, 315, Salt Lake City, Utah. Assessments May, 1914, 5 mills, March, 1915, 1½ mills.

WOLF TONGUE MINING & MILLING CO.**COLORADO**

Controlled by Firth Sterling Steel Co., Pittsburgh, Pa. **Address:** Nederland, Boulder Co., Colorado. Wm. Todd, supt.

Property: 593 acres, including the Cold Spring and other mines in the 75-acre Beaver group a mile south of Nederland, and the Clyde mine of the Ranch group, 3 miles NE.

The **Clyde** mine, the principal producer, has a vein 2'-6' wide with an 80° dip. **Development:** includes a 305' incline shaft, a 560' tunnel connecting with 230' level of shaft. Mine is reported to have produced more ore above 80' level than any other tungsten property known, but ore pinched out. A 2' vein of high grade was found, Feb., 1916, in winze below 230' level.

Ore: the principal ore mineral is ferberite, iron tungstate, occurring in veins in granite or pegmatite. Orebodies are commonly in the form of small lenses a few feet in length. On the 300' level, there is ore for 100'. The greater part of the mining is done by lessees who are paid for shaft sinking and ship their ore to the company's mill; the company receives as royalty 25% of the net proceeds, after deducting treatment charges.

The mill on South Boulder Creek at Nederland treats 15 to 20 tons of 3½ to 4% ore daily. It is described in detail by Leroy A. Palmer in Salt Lake Mng. Review, Feb. 15, 1914, p. 14. Recoveries in the district range from 65 to 85%.

Equipment: includes compressor and power plant. For full description of Colorado tungsten ores see Bull. 583 of U. S. Geol. Survey by Hess & Schaller, 1914.

The **Cold Spring** mine, leased 1916 to Geo. Retallack et al., has a vein showing 6' face of ore with 18" streak of ore containing 57% tungstic acid, in a shoot 150' long on the 350' level. **Production:** July, 1916, averaged 25 tons of rich ore daily.

WOLFSTONE EXTENSION MINING CO.**NEVADA**

Address: V. J. Bonaby, sec., 110 Sutter St., San Francisco, Calif. Cash on hand and received 1914, \$4,058; expenses for 1914, \$541; dividends paid

1914, \$2,820. Balance Jan. 1, 1915, \$695. Property in Manhattan district, Nye Co., Nev., is under lease.

WOLFTONE MINE**COLORADO**

Is working shaft of Western Mng. Co., Leadville, Colo., owned by A. S. & R. Co. Was being unwatered jointly with Empire Zinc Co., July, 1916.

WOLVERINE & ARIZONA MINING CO.**ARIZONA**

Office: Calumet, Mich. Marc Bailey, mine supt. Bisbee, Ariz. **Officers:** John Daniell, pres.; Paul P. Roehm, v. p.; Edw. Ulseth, 2nd v. p.; W. Frank James, treas.; Chas. Chynoweth, sec.; preceding with Benj. F. Chynoweth, W. H. Brophy, Fred C. Smith, W. H. Roberts, Jr., supt., directors.

Inc. 1905 in Arizona, as successor of Wolverine & Arizona Development Co. **Cap.**, \$3,000,000; shares \$15 par; issued 118,674 shares, par value \$1,457,340, subject to assessment and 21,792 shares, par value \$326,880, of full-paid stock. Levied 25-cent assessments March 19, 1906; Sept. 17, 1906; June 17, 1907; Nov. 18, 1907. Annual meeting, second Wednesday in November.

Receipts for fiscal year ending Sept. 30, 1915 totaled \$135,215, with total disbursements of \$60,552. Cash on hand \$155,974.

Dividends: 10 cts. per share, in Dec., 1914; 25 cts. per share, in Dec., 1915.

Property: 9 claims, 152 acres, known as the Cairo, Memphis, Kentucky, Georgia, Louisiana, Chicago, Warren, George and Broken Promise. The Georgia claim lies 600' from lands of the Calumet & Arizona, and is about 3,000' from the Irish Mag shaft of that company, and from the Spray and Holbrook shafts of the Copper Queen. The Uncle Sam and White Tail Deer claims of the Copper Queen are adjacent to the Wolverine & Arizona.

Development: claims lie along the high limestone ridge W. of Bisbee, extending westward to the open valley and the first development was begun on the farthestmost side of the group. The Broken Promise shaft, 700' deep, with 3 compartments, cut mineralized limestone showing considerable iron but no ore in commercial quantity. A drift on the 500' level, running 850' toward the Pittsburg & Duluth group (Cal. & Ariz.) cut leached ore and ledge matter, carrying traces of copper. Drifts running in other directions showed leached ore, but not in encouraging quantities, and work in this area was suspended, 1909.

Exploratory work on the western claims proving disappointing, the easternmost claims were prospected in 1906 by diamond drill and a hole 410' deep passed into 50' of 4 to 10% oxidized copper ore near the Shattuck mine. This orebody being inaccessible from the Broken Promise shaft, the use of the Higgins tunnel was acquired and the ore opened up from the Bisbee side of the mountain. The tunnel was extended 310' to the Wolverine boundary and then southerly to intersect the orebody on the Wolverine ground. Orebody proved to be a replacement deposit of rich oxidized ore, lying within the limits of the Warren claim, about 2,700' from the tunnel portal. After working out the oxidized ore down to the Shattuck boundary, exploration upward was begun and a fine body of sulphide ore was developed in the footwall limestone above the oxidized zone.

The mine has been a small but steady shipper of high-grade ore to the Douglas smelter, this ore paying all working expenses and building up a small surplus. It formerly averaged about 10% copper, but the sulphide ore is of lower grade. The mine has about 3,000' of workings and its orebodies connect downward with great stopes in the Shattuck mine, the deposit being the top of one of the pre-shoots of that property. The mine

is connected underground with the Uncle Sam mine of the Copper Queen Co. as well as with the workings of the Shattuck mine.

Equipment: includes a 250-h. p. steam plant, 2 single-drum hoists and a 6-drill air compressor, all at the Broken Promise shaft and all unused for several years.

Production: 2,524 tons, netting \$37,962 in 1910; 984 tons, netting \$11,873 in 1911; 762 tons netting \$12,861 in 1912. The output for fiscal year ending Sept. 30, 1915, yielded \$130,370 or \$17.13 per ton. The property is excellently handled.

WOLVERINE COPPER CO.

NEVADA

Address: E. S. Deardorf, mgr., Winnemucca, Nev. **Property:** 15 claims, 300 acres in Harmony or Sonoma Mts., 5 miles S. E. of Winnemucca, shows 5 veins, carrying copper ore with silver and gold values.

Development: merely a 65' shaft showing gold ore in the bottom. Work on a new shaft is reported to have begun, June, 1916. **Equipment:** includes gasoline hoist.

WOLVERINE COPPER MINING CO.

MICHIGAN

Office: 15 William St., New York. **Mine office:** Kearsarge, Houghton Co., Mich. **Officers:** John R. Stanton, pres.; Geo. W. Drucker, sec.; preceding with Jas. S. Dunstan and Samuel L. Smith, directors. Theo. Dengler, supt.; F. W. Hartmann, asst. supt.; Chas. L. Noetzel, clerk; David L. Vivian, mill supt.; Arthur Williams, mine capt.; A. Floetter, engr.; A. B. Holtenhoff, master mechanic.

Inc. 1890 in Michigan. **Cap.,** \$1,500,000; shares \$25 par. The company owns \$80,000 stock in the Michigan Smelting Co. Old Colony Trust Co. Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Monday in August.

Financial statement for fiscal year ending June 30:

	Receipts	Tot. Exp.	Profit	Div.	Tot. Sur.
1916	\$1,369,286	\$634,068	\$735,218	\$660,000	\$862,529
1915	929,193	610,991	318,201	360,000	787,311
1914	484,061	402,936	81,075	829,109
1913	1,326,501	724,987	601,514	600,000	748,034
1912	1,327,030	713,840	613,180	540,000	746,520

Dividends: the first dividend was paid Oct. 1, 1898 and 33 dividend disbursements, to 1916, aggregated \$8,400,000.

Property: 320 acres, 280 acres freehold, and 40 acres mineral rights, carries 3,100' of the strike of the Kearsarge amygdaloidal bed, on which the mine is opened. Neighboring properties are the North Kearsarge on the N., Mayflower on the E., Mayflower and South Kearsarge on the S., and Centennial on the W.

The Kearsarge bed averages about 16' in width on the Wolverine property, and this mine was for many years the richest amygdaloidal mine in the Lake Superior district, second in richness only to the Calumet & Hecla among all Lake Superior copper mines. All shafts are sunk at an angle of 41°, and skip tracks have been given crossties, in place of longitudinal stringers, following the plan introduced in the Calumet & Hecla, which permits the use of a cheaper grade of timber and allows quicker repairs. All levels, except some of the very upper ones, are opened at 100' intervals. Owing to the uniformity of the cupriferous bed, all levels from the 1st to the 23d, inclusive, are opened through the entire property, connecting all 4 shafts to the bottoms of Nos. 1 and 2 and connecting Nos. 3 and 4 only below the 17th level. With production at the rate of 6,500,000 lbs. fine copper yearly, the life of the mine is estimated at about 12 years. The new lease on life is due to the reworking of the footwall rock of supposedly

worked out stopes, throughout the mine. The total width of the lode is 15' to 20'; in the original work only 12' was mined, so there remains 3' to 5' of rock which contains about 18 lbs. copper per ton.

Development: several parallel lodes have been prospected, an exploratory crosscut being driven for 2,000' across the formation on the 14th level, reaching the Kearsarge conglomerate on the W., where it was barren. Another exploratory crosscut, 1,600' long, driven E. on the 28th level, intersects the Old Colony lode 1,489' E. of the Kearsarge amygdaloid and cuts other cupriferous beds. A little drifting on the Old Colony lode failed to disclose payable ground. The West lode lying 80' W. of the Kearsarge has been opened by several levels, with some payable ore on the 13th and 14th.

The Wolverine lands also carry the Osceola amygdaloid, but it proved non-commercial in a 631' shaft with drifts on 5 levels.

No. 1 shaft near the Kearsarge line, was abandoned years ago. No. 2 shaft, next S., is bottomed at 1,700' and is used for handling men and supplies.

No. 3 shaft sunk in the footwall, is bottomed at the 39th level, total depth 4,005'. Sinking was stopped at the 39th level as the hoist had reached the limit of its rope capacity. It is proposed to open and mine the remaining 100' below the 39th level by means of a winze 600' S. of the shaft. This inclined winze will eventually attain a depth of 700' in order to reach the boundary of the property. It will take 5 years to reach this point and 15 years to exhaust the ground.

Shafts Nos. 3 and 4 are connected by drifts down to and including the 33rd level. No. 4 shaft sunk 45' in the foot, to guard against drawing, has reached the 38th level, total depth 4,007' and can be sunk to the 42nd level before reaching the Centennial boundary.

Equipment: at No. 3 shaft duplicates that of the Mohawk mines. That at No. 4 includes a 14"x60" Nordberg duplex-cylinder hoist with double conical drum having a maximum diam. of 18', capable of raising 4-ton skips from 1 mile depth, with a 1¼" steel cable. There are 20-drill and 22-drill compressors, and 3 Stirling water-tube boilers, with American automatic stokers and a Green fuel economizer.

Mine has Knowles electric pumps, 3 at No. 2 shaft, and one at shafts Nos. 3 and 4, three pumps having an average lift of more than 1,000' each.

The principal mine buildings are at No. 4 shaft, but there is a model changing house at No. 3 shaft. A telephone system connects underground pump stations and all buildings. The company maintains a 6-ward hospital and staff, and owns a large number of substantial dwellings, the location being exceptionally prosperous in appearance.

Rock is transported between the mine and mill by the Mohawk & Traverse Bay railroad, with a down-grade haul of 13 miles.

Mill is near the mouth of Tobacco river, on Traverse bay, Lake Superior, and adjoins the Mohawk mill, both being served by a single pump and managed by a joint superintendent. The mill has 2 Nordberg heads and uses Wilfley tables. Mineral from the heads and wash is sluiced to the basement through iron pipes, going to the works of the Michigan Smelting Co. at Houghton. A Jackson tailings plant provides for settling out the water and stacking the tailings 800' from the mill by belt conveyor.

The boiler house houses a battery of 200-h. p. Stirling water-tube boilers, equipped with American automatic stokers.

The pump house, owned jointly by the Wolverine and Mohawk, has a 20,000,000-gal. Snow horizontal triple-expansion pump, with 18", 33" and 54" steam cylinders and 22" water plungers, with 36" stroke, besides an auxiliary

8,000,000-gal. Nordberg triple expansion water-end pump, with 3 plungers. The pump house is located on the river, near its mouth, the intake being protected by timber cribs running 300' into the lake to prevent clogging from floating bark and anchor ice.

Average number of men employed at mine and mill is 370.

Recent Production: (fiscal year ending June 30).

	Tons R'k		Tons R'k		Lbs. Cu.		Mineral	Ref. Cu.		Cost per Lb. (b)
	Hoisted	Cost p. Ton	Stamp'd	Cost p. Ton	p. Ton	Lbs.		Lbs.	per Lb. (a)	
1916	301,898	\$1.31	388,898	\$1.89	17.07	9,127,790	6,541,402	8.43	c	
1915	403,219	1.28	397,014	1.80	18.23	9,734,850	7,250,896	8.43		
1914	188,147 (a)	1.85	182,127	1.92	18.86	4,006,015	3,435,459	11.72		
1913	408,514	1.53	388,502	1.62	21.49	10,782,405	8,350,312	8.965		
1912	414,544	1.53	401,908	1.58	23.45	12,164,790	9,408,990	7.586		
1911	400,296	1.59	388,476	1.64	24.75	12,227,500	9,617,168	7.542		
1910	405,790	1.55	390,837	1.61	24.96	12,359,000	9,757,101	7.413		

(a) Mine was closed from July, 1913, to April, 1914, on account of the Western Federation of Miners strike. (b) Cost per pound includes construction.

Production and yield of refined copper per ton of rock for the first 7 months of 1916:

	Output, lbs.	Lbs. p. T. rock
January	460,967	16.52
February	516,607	18.07
March	577,684	18.00
April	588,032	17.91
May	495,437	15.82
June	493,378	15.74
July	545,156	18.62

With a 12-year life, as estimated by the directors, and an annual yield of 6,500,000 lbs. of copper figured at a total of 78,000,000 lbs., the profit with 15c copper and 9.4c cost would be 4,368,000, equivalent to \$72 per share, or \$6 per year.

Company's surplus June 30, 1916, was \$862,529, equivalent to \$14.36 a share.

WOLVERINE MINING & DEVELOPMENT CO. BRITISH COL.

Succeeds Kootenay Dev. Co. Ainsworth, B. C. Jere Madden, pres., Rapid River, Mich. J. Cleveland Haas, managing director, and J. F. Carey of Spokane, Wash., director.

Property: the Nicollet group of 14 claims on Kootenay lake, north of Ainsworth and adjoining the Highland and Florence mines (Florence Mng. Co.). Veins in metamorphic rocks are said to carry rich silver-lead ores. A new tunnel will be driven in 1916-17.

WONDERFUL MINING CO., LTD.

IDAHO

Office: Otterson Blk., Wallace, Idaho. Mine near Mullan, Shoshone Co. Idaho. A. H. Featherstone, sec.-treas. Stock is assessable; 9 assessments called to end of 1915, last one of 1 mill levied July 18, 1916, payable Aug. 30.

Lands: 4 claims, patented, lying next W. of the Bullion mine, on the eastern slope of Stevens peak, have a 1,200' crosscut tunnel developing a vein said to give a fair showing of galena and copper ore.

WOODBURY COPPER CO.

ARIZONA

H. G. Murphy, Phoenix, Ariz., agt. Reported in July, 1916, that H. Cavanaugh and associates of Seattle, Wash., had purchased the property for \$200,000 and that work would be begun on the claims in August.

WOODLAWN COPPER MINING CO.

UTAH

Office: 305 Atlas Blk., Salt Lake City, Utah. Mine near Brighton, Salt Lake Co., Utah. **Officers:** H. W. Lawrence, pres.; A. C. Ellis, Jr., v. p.; George N. Lawrence, sec.-treas. Inc. 1899, in Utah. **Cap.,** \$70,000; shares 10 cts par, assessable.

Lands: 7 claims, patented in the Big Cottonwood district, 18 miles from a railroad, having 3 tunnels of 360', 980' and 100', with about 3,500' of workings, showing lead, zinc, silver and copper ore, whose value is mainly in lead.

Development: work was resumed in 1915, after an idleness of several years, the main tunnel being driven 500' further. Estimated in May, 1916, to have 2 carloads of shipping grade zinc ore in the stockpile.

WORLD'S FAIR MINE.

ARIZONA
Patagonia, Santa Cruz Co., Ariz. **Property:** 13 claims, near Harshaw, S. of Patagonia, in the eastern end of the Salero mountains, has a 600' main shaft, with about 2 miles of workings, developing an 8' orebody, carrying silver-lead ore.

The mine has been a shipper, since about 1893, of high-grade silver ore, and is popularly reputed to have produced about \$500,000 worth of ore. Property was under option to a syndicate of stockholders in the Commonwealth M. & M. Co., but option was relinquished, April, 1915.

WYANDOT COPPER CO.

MICHIGAN
Office: 68 Devonshire St., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich. **Directors:** Ashley Watson, pres.; Jos. Dorr, v. p.; Chas. E. Adams, sec.-treas. and Frank L. Van Orden, mgr. Louis La Rochelle, mg. capt.

Inc. Feb. 3, 1899, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; paid in \$11. Has levied assessments of \$500,000 since organization. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Annual meeting, second Monday in May.

Company ended fiscal year March 31, 1916, with cash assets of \$23,733; due from unpaid assessments, \$80,819.

Property: 1,065 acres, adjoins the Winona, in Secs. 16, 20 and 21, T. 52 N., R. 36 W. Exploratory work, begun Feb., 1899, was done in search of the Winona bed; later to locate the southern extension of the Baltic amygdaloid, after which attention was turned again to the Winona bed, and latterly to development of an amygdaloidal bed, the No. 8 lode, lying about 2,300' E. of the Winona lode. The average strike of the Keweenawan formation on this land is N. 53° E., with an average dip of 65°, and the Wyandot lands carry the strike of the Keweenawan bedded series for about 1½ miles.

Development: by several shafts. No. 1, 1,000' deep, located in the S. E. ¼ of Sec. 21, T. 52 N., R. 36 W., is sunk in the footwall of the Winona bed.

No. 11 exploratory shaft is sunk 710' on a stratum paralleling the Winona bed, at a distance of 1,200'. This bed looked good when first opened, and diamond-drill cores were rich, but the bed proved poor under development. A crosscut driven S. E. from the bottom of No. 11 shaft for 2,640', intersects 13 distinct amygdaloidal beds, Nos. 3 and 8 showing copper. Drifting done on No. 3 bed disclosed considerable mass and barrel copper, but No. 8 is the more promising.

Miscellaneous work of the past includes a 102' vertical shaft, sunk on a lean amygdaloidal bed known as the Misery river bed, in Sec. 16, T. 52 N., R. 36 W., but nothing of value was developed. Some years ago a vertical shaft was sunk on lands held under option, near the W. quarter post of Sec. 28, T. 52 N., R. 36 W., to depth of 250', and crosscuts driven both E. and W. with about one-half mile of workings. This work crossed the horizon of the Baltic bed, but what was deemed the Baltic amygdaloid was found highly altered, and worthless, as was the whole country in the neighborhood.

Extensive diamond drilling has been done on the property and a core, taken 1904, from the horizon of the Lake bed, showed a little copper, but

was not considered important at that time. The ground has been carefully prospected again by diamond drill, in Secs. 16 and 21. Holes Nos. 21 and 22 showed beds offering encouragement, and some trenching was done on 1 bed, 48' wide, carrying a little copper from foot to hanging. Another trench, 1,500' N. E. disclosed the bed under only 16' of overburden, and a shaft known as the Sec. 16 shaft, was sunk to a depth of 65'. A crosscut at this depth shows the bed to be 38' wide, carrying finely-disseminated copper for about 10', with small masses along the footwall.

Recent activity has been centered in development work in the No. 8 lode, 1,100' S. E. of the No. 11 shaft. This lode is opened by the long crosscut on the 700' level, and below this depth by a 115' winze, with about 800' of drifts on the 815' level, 400' of drifts on the 900' level and drifts have been started on the 1,000' level, the bottom of the winze. The showing on these levels has been varied and sufficient work has not been done to fully demonstrate the value of the lode.

Equipment: includes a steam plant with Lidgerwood hoist, good for 1,000' and compressors of 12 drills aggregate capacity.

Work at present is confined to drift-stopping, preparatory to regular stoping, both N. and S. of the winze on the 800' level. Gratifying results have been obtained and if present developments are indicative of the general mineralization of the lode, the future of the property looks good. About 25 men are employed.

The Wyandot company has worked faithfully and with skill for more than a decade to make a profitable mine, and though not yet successful, has not exhausted the possibilities of its holdings.

WYOMING COPPER & GOLD MINING CO.

WYOMING

Office: Alma, Kan. No representative at former mine office, Encampment, Carbon Co., Wyo. C. B. Henderson, pres.; Al Rohr, v. p.; J. R. Henderson, sec.-treas. **Inc.** Sept. 3, 1903, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; nonassessable.

Property: 9 claims, known as the Metal Chief and Jessie group, in Hog Park, in the upper Platte district, 12 miles from a railway. Claims show granite and gneiss, cut by 2 fissure veins with S.-E. strike, reported by management to average 28 to 35' in width, and to carry copper oxide and carbonate ores, with average assay of 3 to 15% copper, a little silver and \$1.63 to \$3.29 gold per ton. The Metal Chief vein has a 105' shaft and the vein is reported to widen at depth. The Jessie vein has a 175' shaft showing ore of 5 to 10% copper tenor with small gold and silver values.

Equipment: includes a small steam plant with a hoist and 3 buildings. Development has been slow for some years past, as the officers have furnished most of the funds, but a little work has been done annually.

WYOMING COPPER MINING CO.

WYOMING

Office: 303 Detroit Free Press Bldg., Detroit, Mich. **Mine office:** South Pass City, Fremont Co., Wyo. **Officers:** Charles K. Skinner, pres.; C. F. Remington, treas.; Jas. MacFarlane, v. p. and supt.; C. A. Spalding, sec.; preceding with Chas. E. Murphy and Chas. D. Ridgway, directors.

Inc. 1905, in Wyoming. **Cap.**, \$2,000,000; shares \$1 par; nonassessable; issued \$1,375,000. Annual meeting, last Saturday in July.

Property: 12 quartz claims, 240 acres, and a 30-acre placer claim, in the South Pass district of the Wind River mountains, is reported to show a contact zone, between granite and metamorphic rock, proven for one-half mile length by prospect pits. **Development:** includes a 500' incline shaft, and several hundred feet of crosscutting. The vein is reported by the former management to show sulphide ore at depth of 72', ore giving assays of 2 to

6% copper, with an average of 1 to 2 oz., and maximum of 20 oz. silver, and \$3 to \$4 gold per ton.

Equipment includes an 80-h. p. boiler and a 40-h. p. Fairbanks-Morse hoist, with several buildings.

YAEGER CANYON COPPER CO.

ARIZONA

Dead. Described Vol. XI, Copper Handbook. Formerly at Jerome, Ariz.

YAK MINING, MILLING & TUNNEL CO.

COLORADO

Office: Marbridge Bldg., W. 34th St., New York. Mine office: Leadville, Colo. Officers: Myron T. Herrick, pres.; Harry C. James, v. p.; Walter W. Davis, v. p. and genl. mgr., Leadville and New York; J. C. Mitchell, sec-treas., Denver Natl. Bank, Denver. Hugh C. Watson, supt.

Cap., \$1,000,000; shares \$1 par; all outstanding and assessable.

Comparative General Balance Sheet:

	Assets:				Liabilities:	
	Tunnel & Prop.	Equip.	Other Current	Total	Capital Stock	Undiv. Profits
1915	\$ 977,543	\$66,386	\$724,383	\$1,768,312	\$1,000,000	\$768,312
1914(a)...	1,087,013	81,139	181,678	1,626,401	1,000,000	530,070
1913	1,000,611	85,582	93,889	1,439,787	1,000,000	410,765

(a) Last issued.

Comparative Income Account:

	Mng. Co. Acct.	Total Net	Div.
1915	\$268,264	\$398,242	\$160,000
1914	217,949	306,545(a)	110,000
1913	154,928	210,985	80,000
1912	69,247	120,216	80,000

(a) Except certain charges in profit and loss account.

Dividends: quarterly, commenced March 31, 1904, have been continuous. Total \$1,877,685 to July 1, 1916, including a stock dividend of 12½% declared Oct. 31, 1904. Present rate 3%.

Property: owns 249 acres and controls an additional area of 1,817 acres at Leadville. Also holds agreements covering several hundred additional acres, under which agreements company has the right to drive the Yak tunnel into such ground at its option.

The Yak Tunnel is a 4-mile transportation and drainage tunnel which drains an important part of the Leadville camp, including the White Cap and Cord properties on Iron Hill. The portal of the tunnel is in California Gulch, about 1 mile from Leadville; the breast, Jan., 1916, was in the Vega group, 1,200' from surface. The ores developed by the tunnel are chiefly complex sulphides containing gold, silver, lead and zinc. For geology of the Leadville District see U. S. G. S. Bull. 320, by S. F. Emmons and J. D. Irving.

Company employs 140 men; has electric power and haulage.

The company is one of the largest in the district, is in experienced hands and is well managed.

YALE DEVELOPMENT & CONSTRUCTION CO.

BRITISH COLUMBIA

Has 25-year lease on property of Olalla Copper Mines & Smelting Co., which see.

YAMPA SMELTING CO.

UTAH

Dead. Smelter equipment sold in 1914. Fully described Vol. XI, Copper Handbook.

YANKEE BOY MINING CO.**IDAHO**

Scott Anderson, pres.-mgr., Wallace, Idaho. Property leased, in part, to Big Creek Leasing Co., which see. The Yankee Boy mine is in the Big Creek section, near Kellogg, Shoshone Co., Idaho.

Development: includes an 1,800' tunnel and a 500' raise. A 4' vein cut in 1916 is said to average 200 oz. silver per ton with copper-lead values. Samples said to have assayed 123 oz. silver; 8.4% lead; 14% iron; 0.8% copper. **Equipment:** includes gasoline engine, compressor, etc.

Production: in 1913 was 271 tons with gross value of \$35,461 and 381 tons in 1914 returning \$38,646. Net profit for 1914 was \$4,557.

YANKEE CONSOLIDATED MINING CO.**UTAH**

Office: 308 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co. **Officers:** A. W. Vosburg, pres.; G. L. Bemis, v. p.; A. E. Canfield, sec.-gen. mgr. Lew Merriman, supt.

Inc. July 8, 1898, in Utah. **Cap.**, \$1,000,000, increased in 1908 from \$500,000; shares \$1 par; assessable all issued; listed in Salt Lake City. Has paid dividends of \$192,500; last dividend paid in Feb., 1913, 1c per share.

Property: 134 acres on Godiva Hill, Tintic district, includes the Yankee, Mountainview and Lakeview mines, lying between the Beck Tunnel and Uncle Sam Consolidated on the south and May Day on the north. **Ore:** silver-lead-zinc with some gold. Country rock is limestone and porphyry. For geology of Tintic District see U. S. G. S. Folio No. 65.

Development: by tunnels and shafts, deepest 1,700'. Late development is along a strong fissure vein thought to be the May Day and showing high-grade silver ore. A drift is also being run on a quartz ledge from the bottom of a 100' winze. Lessees are working part of the property.

Company has not replied to requests for information.

YAQUI CANYON COPPER CO.**MEXICO**

Idle. **Former offices:** 408 Gumbel Bldg., Kansas City, Mo., and Suaqui de Batuc, Ures, Sonora, Mex. **Officers:** at last accounts, A. J. Davies, pres.; S. M. Major, v. p.; W. T. Kerr, sec.; Frank B. Foster, treas. **Inc.** in Ariz. **Cap.**, \$2,000,000; shares \$1 par.

Property: 60 pertenencias, 148 acres, known as the Todos Santos and Great Republic mines, and a 50-acre smelter site, has contact deposits between limestone and porphyry, two under development, of 10' estimated average width, carry copper and lead ores, former said to assay 7% copper and 50 oz. silver, and latter 15% lead and 30 oz. silver, with a trace of gold. The principal property is an antigua. **Development:** by 4 tunnels and 7 or 8 shafts.

Equipment: includes a steam plant, air compressor and a small smelter, with a 10-ton reverberatory furnace. Presumably idle as the region in which the mine is located is notoriously unsafe since the Mexican revolution began.

YAQUI COPPER CO.**MEXICO**

Office: 1 Madison Ave., New York. **Mine office:** Suaqui de Batuc, Ures, Sonora, Mex. **Officers:** Wm. Sauntry, pres.; Dr. A. E. Magoris, v. p.; Hon. Geo. E. Green, sec.-treas., at last accounts. **Inc.**, 1902, in West Virginia. **Cap.**, \$5,000,000; shares \$1 par.

Property: originally claimed to be 6,032 acres of mineral territory, and 119,284 acres of timber and grazing lands, also water rights to 25 miles of the Yaqui river, the mining lands being in the vicinity of Suaqui de Batuc Campo Santo Nino, in the Sierra Madre, 120 miles from Hermosillo. Property is claimed to show antigua workings, iron ore and indications of coal. In June, 1906, the Montana de Cobre Co. was said to have acquired 1,000 pertenencias formerly held by the Yaqui Copper Co.

Development: begun, 1901, is by 2 shafts and 8 tunnels, and so far as can

be learned the mine has shown practically no ore. Improvements include an engine and boiler house, office building and store.

The company was promoted with \$10,000 offices, magnificently furnished, in which visitors were royally entertained and given handsome ore samples. Company's literature was untruthful, its representations gross exaggerations, and its property practically valueless. It caused as much misery and harm as any mining fraud ever perpetrated. See Vol. VIII of Copper Handbook for full description.

YAQUI MINING CO., S. A.

MEXICO

Fundicion, Sonora, Mex. Geo. M. Ryall, pres., care Jonathan Club, Los Angeles, Calif. Inc. in Mexico. Owned by Mexican Exploration & Mining Co., controlled by Pacific Smelting & Mining Co. Property is described under latter title.

YAQUI SMELTING & REFINING CO., S. A.

MEXICO

San Antonio de la Huerta, Ures, Sonora, Mex. Is the Mexican operating company of the Sonora Mining & Development Co., and described under latter title. Fully described Vol. VIII of the Copper Handbook.

YAVAPAI CONS. GOLD-SILVER-COPPER CO.

ARIZONA

Office: Prescott, Ariz. Mine office: Crown King, Yavapai Co., Ariz. Hon. Frank M. Murphy, pres.

Lands: 48 claims, partly patented, including the Old Reliable mine, 3 miles from Crown King; the Wild Flower group, in Pine Grove district; the Tiger group, in the Bradshaw mountains, and the Crowned King mine, in the Bradshaw mountains. The last named group, 18 claims, bought from B. A. Turner, receiver of the old corporation, for \$75,000, half in cash and half in shares, has been a considerable producer, mainly of gold.

Development: by several thousand feet of old workings on a contact vein, between porphyry and syenite, carrying slightly auriferous and highly argentiferous copper ores, opened by a 170' shaft. **Equipment:** includes steam power, compressor, 10-stamp mill and 100-ton concentrator. About 20,000 tons of old tailings were sold in 1915 and are being treated in a flotation plant. Mine is idle.

YAVAPAI METALS MINING & REDUCTION CO.

ARIZONA

Dead. Property: now owned by A. W. Bichols of Humboldt, Ariz., consisted of 14 claims, 266 acres, unpatented, in the Agua Fria district, about 7 miles N. E. of Humboldt. See Vol. XI, Copper Handbook.

YELLOW ASTOR MINING & MILLING CO.

CALIFORNIA

Office: Coulter Bldg., Los Angeles. Mine office: Randsburg, Calif. **Officers:** A. Ancker, pres.; E. D. Mooers, v. p.; W. J. Cotton, 2nd v. p. and mgr.; R. L. Burcham, sec.; the foregoing and E. L. Kenney, R. A. Dalluca, C. G. A. M. de Pauw, directors. C. H. Fry, supt.; A. Little, mill supt.

Inc. Nov. 16, 1907, in Nev. **Cap.**, 100,000 shares; \$10 par; all issued. R. L. Burcham, Los Angeles, transfer agt. Annual meeting, May 16. Is a close corporation.

Dividends: declared third Wednesday and paid the 10th of following month. Total dividends paid to June 1, 1915, \$1,163,789.

Assets: Dec. 31, 1915; property account, \$1,115,143; securities owned, \$30,000; other investments, \$680,485; inventories, \$6,772; accounts receivable, \$17,000; cash, \$38,287, total, \$1,887,687. **Liabilities:** capital stock, \$1,000,000. Gross earnings, \$473,277, working expenses, \$395,477, net earnings, \$77,800; other income, \$10,000, total net income, \$87,800. Deductions, \$58,194. Surplus for year ending Dec. 31, 1915, \$29,606.

Property: 40 patented claims, over 600 acres at Randsburg, Rand district, Kern county. Vein occurs in granite, porphyry and schist. Main orebody averages 30' to 40' wide with schist hanging-wall. Ore is low-

grade, free milling gold. Reserves assay \$3 per ton and mill extraction is 98%. Smaller veins are said to contain rich ore.

Development: includes main shaft, 750' deep, 12 miles of tunnels, 15 miles of stopes, raises and winzes and several opencuts. Most of the work is by the glory-hole method on a large scale, electric power being used for lighting and haulage. **Ore reserves:** are said to be about 5,000,000 tons. Mining and milling costs total \$1.55 per ton.

Mill: equipment includes 100 stamps, amalgamating plates and cyanide department, all driven by electric power from the lines of the Sierra Power Co. Mill operates in 3 shifts and reduces about 500 tons daily, tailings being stacked.

YELLOW BIRD GOLD MINING CO.

COLORADO

Address: J. J. Yeckel, pres. and gen. mgr., Cripple Creek, Colo. **Cap.** 1,500,000 shares; 10c par; non-assessable. A new company promoted to revive and develop a group of claims, about 40 acres, on Gold Hill, Cripple Creek, Teller Co., Colo., including the Yellow Bird, Red Bird, Cottontail, Volcano, Mound Rock and Red Jacket. These properties have been inactive for years except for a little work by lessees. Initial offer of stock was made at 2½c a share.

YELLOW JACKET G. & S. MNG. CO.

NEVADA

Property sold to and company merged with Jacket Crown Point Belcher Mines Co., March 10, 1915, for 360,000 common and 12,000 preferred shares of the new corporation.

YELLOW PINE MINING CO.

NEVADA

Offices: 431 Security Bldg., Los Angeles, Calif. and Goodsprings, Nev. **Officers:** J. F. Kent, pres.; R. B. Chapman, v. p.; F. A. Hale, Jr., sec. and mgr.; G. W. Kent, treas.; with S. E. Yount, directors. J. C. Kemple, mine supt.

Inc. 1905, in Nev. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; all issued. No bonded indebtedness. Stock transferred and registered at company's Los Angeles office. Annual meeting, third Wednesday in January. Listed on Los Angeles Stock Exchange.

Gross earnings, year ending January, 1916, \$853,200; receipts from sale of ore, \$852,652; operating expenses, \$153,589; cash, \$162,188; dividends paid, \$450,000. Total dividends, \$893,008.

Property: 13 patented claims, about 240 acres at Goodsprings, Yellow Pine district, Clark county. Ore occurs as carbonate and oxide in limestone and averages 30% zinc, 14% lead and 12 oz. silver. The main deposit dips about 30° and strikes N-S.

Development: by an inclined shaft, 900' deep, greatest depth of workings being 950' and linear extent 20,000'. Ore is mined by square set stoping.

Equipment: includes 40-h. p. electric hoist, compressor, 12 miles of 36" gauge railway, buildings, etc.

Mill: the 100-ton mill is, strictly speaking, a separator rather than a concentrator. The ore is a high-grade lead-zinc material, and in the treatment at this plant no rejection is made, all products of the mill being shipped.

The ore consists principally of lead carbonate and zinc carbonate and silicate. Sulphides are almost entirely absent as evidenced by the fact that the smelter returns on the lead concentrates show only 2 or 3% sulphur.

From the mill bin the ore is fed to a short conveyor, on which the larger pieces of waste are sorted out. This conveyor dumps over a 1" grizzly and the oversize goes to an 8" by 16" roll-jaw crusher. Grizzly and

rock breaker both discharge to a chain elevator, which dumps to the fine-ore bin.

The fine ore is delivered to a set of 16" by 36" Cornish rolls set to $\frac{1}{4}$ ". These discharge to a wet elevator, which raises the ore to the top of the mill, where it passes successively over $\frac{1}{4}$ " and $\frac{1}{8}$ " Impact screens. The screen oversize is treated on two 2-compartment Harz jigs, which make lead concentrates from the bed and hutch of the first compartment and middlings through the second compartment and over the tailboard. The middlings from the coarse jig are returned to the first set of rolls and those from the finer jig to a second set, both of which discharge to the elevator and to the impact screens.

The undersize of the second screen goes to a 5-compartment Richard's classifier, which makes 6 products, each of which goes to an Overstrom table. The tables make only 2 products, lead and zinc concentrates. The lead goes to tubs and the zinc, with all slime to settling bins beneath the table floor. The lead is shoveled to small cars, the zinc is drawn off through gates and the slime overflows to ponds from which it is shipped when a sufficient amount accumulates.

Under this system an extended run of 16,136.3 tons of crude ore assaying 10.2% lead, 31.8% zinc and 5.4 oz. silver produced 1521.085 tons of lead concentrate averaging 53.2% lead, 13.75% zinc and 28.1 oz. silver; 11,260.65 tons of zinc concentrate assaying 33.2% zinc, 4.4% lead and 2.5 oz. silver, and 2173.0 tons of slime averaging 7.3% lead, 35.1% zinc and 4 oz. silver; 833.4 tons of waste was removed by sorting. During 1915 milling cost was \$1.53 per ton.

Production: for 1915, 1521 tons lead concentrates, averaging 53.2% lead and 28.1 oz. silver per ton; 13,914 tons zinc concentrates with 35% zinc; crude zinc ore, 2,267 tons. Total output to date about 80,000 tons. Indicated earnings per share, 1915, about 60c.

Among improvements planned for 1916, is an increase of hoisting capacity.

YELLOW TIGER MINING CO.

NEVADA

Office: 107 Boston Bldg., Denver, Colo. Mine office: Goldfield, Nev. H. A. Riedel, pres.; F. W. Holmes, supt. Cap., \$4,500,000; shares \$1 par; 500,000 shares in treasury.

Stock is listed on San Francisco and Salt Lake City exchanges and is traded on the New York Curb.

Property: 35 acres, next S. of the Goldfield Consolidated and E. of the Columbia Mountain fault, shows a vein of 18" to 2' width worked to a depth of 750' by shaft with several hundred feet of openings. Ores are said to carry from 6 to 9% copper, and gross values reported as from \$25 to \$32 per ton, are apparently mainly in this metal. About \$120,000 has been spent in development work. In 1915 obtained control of the Red Lion group of claims, adjoining on the south, supposed to contain the continuation of veins found on Yellow Tiger company's land.

Only development work was done in 1914 and 1915, mainly on the 600' and 700' levels. In April, 1916, property closed down and plans are reported under way for refinancing, preparatory to developing both Red Lion and Yellow Tiger claims.

YERINGTON BULLION MINING CO.

NEVADA

Ludwig, Nevada Co., Nev. Officers: A. J. Schmidt, pres.; J. A. Knox, sec.-gen. mgr.; J. M. Moyle, treas.; with J. A. Sisk, E. W. Brush, F. S. Stanley and Henry Hertz, directors. W. F. Pfeleger, supt.

Inc. May 31, 1909, in Nev. Cap., \$2,500,000; shares \$1 par; 1,000,000 shares preferred stock, fully paid and non-assessable; 300,000 shares issued;

1,500,000 shares common or promotion stock; assessable, 1,275,759 shares issued.

Property: 56 mining locations, 1,120 acres, 2 miles N. of the Nevada Douglas property in Yerington district. Developed by 400' main working shaft and 2 tunnels 300' long, E. and W. of the shaft on the 300' level, showing a deposit of sulphide ore with gold and copper values. **Equipment:** includes a smelter, 2 hoists, compressor and tools.

Company is apparently without funds and its literature is of a suspicious character.

YERINGTON CONSOLIDATED COPPER CO. NEVADA

Office: 509 McCornick Bldg., Salt Lake City, Utah. **Mine office:** Mason, Lyon Co., Nev. Frank J. Hagenbarth, pres.; J. H. Mays, v. p.; M. B. Johnson, sec.; John Dern, treas.

Inc. Feb. 11, 1907, in Utah. **Cap.**, \$5,000,000; shares \$5 par; nonassessable; issued, 725,000 shares. **Debentures**, \$100,000 at 6%, authorized. Annual meeting second Monday in July.

Lands: 14 claims, patented, in 2 groups, known, as the Copper King and Copper Deposit, the former, lying between the Bluestone and Mason Valley mines, developed by a 70' shaft and 2 tunnels of 500' and 600', showing carbonate ores.

YERINGTON MALACHITE COPPER CO. NEVADA

Office: 414 Judge Bldg., Salt Lake City, Utah. **Mine office:** Yerington, Lyon Co., Nev. **Officers:** Grant Snyder, pres. and gen. mgr.; H. J. Mayer, v. p.; Gideon Snyder, sec.-treas.; with S. M. Levy and W. T. Snyder, directors.

Inc. Oct., 1906. **Cap.**, \$5,000,000; shares \$5 par; assessable; issued, 666,333 shares.

Property: 11 claims, patented, adjoining the Mason Valley mine, show 3 mineralized zones of 20 to 150' width, proven on surface for a distance of 2,000'. Orebodies are fissure veins in limestone, carrying oxidized ores to a depth of about 100' below which ore minerals are mainly chalcopyrite, associated with epidote and garnet.

Development: by numerous short tunnels and pits, a 600' tunnel, and a 140' three-compartment shaft, with about 2,000' of workings connecting on the vein with the Mason Valley workings. Ores as mined average about 6% copper. Management estimated 1914, 100,000 tons of 2% ore available for treatment, when leaching plant is installed.

Equipment: includes a 125-h. p. General Electric motor, steam hoist good for 600' depth. Rand Imperial compressor, and Hendrie & Bolthoff hoist. Electric power is taken from the Truckee River Power Co. There are several mine buildings.

Production was begun May, 1912, and company shipped ore, returning 174,407 lbs. copper to the Mason Valley smelter, in 1913. No later output reported.

YERINGTON MINES & EXPLORATION CO. NEVADA

Yerington, Lyon Co., Nev. **Officers:** C. S. Durand, pres.; B. F. Kurz, v. p.; V. B. Durand, sec.; Geo. F. Willis, treas., with W. S. Weaver and Wm. Cramer, directors.

Inc. Feb. 27, 1909, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; issued \$735,000. Annual meeting, first Monday in March.

Property: 24 claims, unpatented, including the Effie May group of 2 gold claims, the Copper Flat group of 10 copper claims, and the Mohawk group of 12 gold-copper claims, latter being the principal property, located 1 mile N. W. of Yerington.

The Mohawk group is developed by a 125' incline and several shallow

shafts of 20' to 80' depth, sunk in the copper-bearing formation. Three cars of ore shipped in 1914 from the 125' inclined shaft contained 0.5 oz. gold and 1.75% copper per ton. A 15-h. p. gasoline hoist has recently been added and development work is now in progress.

The **Copper Flat** group, 1 mile E. of Yerington, is developed by about 20 pits and shallow shafts, deepest 60', showing malachite and cuprite of about 6% copper tenor.

The **Effie May** group is a gold prospect developed by a 135' shaft, with about 2,000 tons of ore blocked out. Property is on the Nevada Copper Belt railway.

YERINGTON MOUNTAIN COPPER CO.

NEVADA

Office: Tonopah, Nev. **Mine office:** Schurz, Mineral Co., Nev. **Officers:** F. K. Pittman, pres.; E. M. Kirchen, v. p.; P. S. Booth, sec.-treas.; J. G. Kirchen, gen. mgr., with H. O. Jones, W. A. Krasselt and H. J. Toner, directors. E. J. Haug, supt.

Inc. 1912 in Nevada. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued, \$1,500,000. First National Bank of Tonopah, Nev., registrar and transfer agent. Listed on New York Curb. Balance sheet, Feb. 1916, shows assets, \$1,979,359; cash in banks, \$45,046; liabilities, \$1,741,203; surplus \$283,202.

Property: 33 claims, 680 acres, in the Mountain View district, 9 miles N. W. of Schurz and about 12 miles E. of Yerington, shows 2 fissure veins, in grano-diorite, that run N. 40° E., and dip 65°. Ore minerals are mainly chalcocite, with chalcopyrite, chrysocolla, malachite, cuprite and occasional native copper.

In July, 1916, company purchased the Adelaide mine, near Golconda, Humboldt Co., Nev., from the Glasgow & Western Dev. Co.

Development: by a vertical 540' main shaft, and 3 tunnels of 650', 750' and 950', with about 6,000' of openings. A crosscut below the Levine tunnel is developing a good body of ore. The Azurite tunnel was 1,000' long, June, 1916; it is being driven from the other side of the mountain to cut ore exposed in the Levine tunnel and at 400' greater depth. Tunnel discloses ore in bunches and streaks. The Beach tunnel yields a good grade of shipping ore of about 5.5% copper.

Equipment: includes a 25-h. p. gasoline hoist, 10x12" compressor and 11 buildings. Employs 20 men.

YORK HARBOUR MINE.

NEWFOUNDLAND

Idle. Former address: York Harbour, Birchy Cove, Bay of Islands, N. F. The mine, 4,000' from the bay, at elevation of 1,000', carries cupriferous pyrite. The ore is compact and close-grained with 2% to 4.5% copper and 38 to 41% sulphur, the sulphur being valuable for the manufacture of acid.

Development: by 360' main shaft sunk at an angle of 72° to the S. E., practically the same as the dip of the ore lenses. Levels are opened at 60' intervals, with drifts driven S. W., along the strike of the orebodies.

Equipment: included a 250-h. p. steam plant, with a 50-h. p. Flory hoist and an 8-drill Norwalk high-altitude air compressor. Company supposedly bankrupt and property has been closed down for years.

YOSEMITE MINES CO.

UTAH

Controlled by Bingham Mines Co.

Office: 60 Congress St., Boston, Mass. **Operating office:** 404 Dooly Bldg., Salt Lake City, Utah. **Mine address:** Bingham Canyon, Salt Lake Co., Utah. **Jas. P. Graves**, pres.; **Sydney S. Millett**, sec.-treas.; **Imer Pett**, gen. mgr. **Inc.** Aug, 1909, in Maine. **Cap.**, \$1,000,000; shares \$1 par.

Property: 12 claims, patented, including the Yosemite and Cluster

groups and the Mississippi claim, said to have produced \$1,000,000 gross. The lands lie N. and W. of the Dalton & Lark group of the Bingham Mines Co., and carry approximately 2,400' of the strike of the Lark and Lead mine veins.

Development: by the Yosemite shaft connecting with the Mascotte tunnel on the 2,220' level and the 1,650' Paradox tunnel. Ores carry silver-lead, but copper ore, associated with pyrite, is found on the 800' level. **Equipment:** includes a power plant and air compressor.

YOUNG MINES CO., LTD.

ARIZONA

Phoenix, Ariz. **Officers:** G. U. Young, pres. and gen. mgr.; S. H. Stewart, sec.; E. M. Young, treas.; A. S. Lewis, supt.

Inc. 1910, in Ariz. Cap., 75,000 shares; \$10 par; non-assessable; outstanding 12,000. Annual meeting in June.

Property: 12 claims, about 220 acres, 20 miles E. of Mesa, Mariposa Co., contains a large, disseminated low-grade orebody, said to carry sufficient free-milling gold for mining on a large scale by steam shovel or caving. Low-grade dump is said to average \$4.20 per ton.

Development: includes 3 shafts, 150', 320' and 445' deep and about 3,000' of laterals. **Equipment:** includes 3 steam hoists, 3 pumps, small compressor, a 20-stamp 60-ton mill, buildings, etc.

Y. P. MINING CO.

ARIZONA

Address: N. H. Getchell, mgr., Prescott, Ariz. Operates the Cash property, 14 miles S. of Prescott in the Senator district, Yavapai Co.

Dividends paid are said to amount to \$15,000.

Development: has continued for 3 years and is now at 750'. The 60-ton mill and concentrating plant has 5 Wilfley tables and a Monell slimer and is reported as producing \$8,000 gold bullion per month.

YUBA LEASING & DEVELOPMENT CO.

NEVADA

B. L. Smith, mgr., Pioche, Nev. H. L. Parker, supt. Operates under lease a group of mines at Pioche, Lincoln Co., developed by 1,200' shaft and equipped with a gasoline hoist and air compressors. A 100-ton cyanide and concentrating mill erected in 1915 was destroyed by fire in January, 1916.

YUCCA-ARIZONA COPPER CO.

ARIZONA

Address: 516 Merritt Bldg., Los Angeles, Cal. **Mine:** 20 miles from Yucca, on the A., T. & S. Fe R. R., in Mohave Co., Ariz. **Officers:** S. J. Haynes, pres.; C. H. Post, v. p.; H. Leon Haynes, sec.; preceding with W. S. Bullis and W. H. Dann, directors. J. E. White, supt.

Inc. Jan. 20, 1911, in Arizona. **Cap.,** \$2,000,000; shares \$1 par; 525,000 issued. Annual meeting, third Monday in January.

Property: 15 claims, 12 owned, 3 bonded, 320 acres, with 2 mill sites and 2 water rights. Lands show granite and porphyry with 6 veins, the main ledge averaging 3' thick and proven for 3,000' along the outcrop. Ore carries chalcopyrite and copper glance and is reported to average 11.85% copper.

Development: includes 700' shaft, with crosscut showing 4' of ore. **Equipment:** includes small gasoline hoist, electric power and mill.

Company expects to change organization and capitalization in 1916 to comply with requirements of the Corporation Commission, and list stock, pending which the property will remain idle.

YUCCA TUNGSTEN CO.

ARIZONA

Yucca, Mohave Co., Ariz. **Property:** 20 claims, 25 miles N. of Edmaier Mining Co., (tungsten mine) in Cedar Valley district, Mohave Co., shows a 5' vein of ore carrying 5% tungstic acid and 1% to 3% copper.

Development: comprises a 250' shaft and 300' of drift tunnels, 200' apart vertically. Company operates a 25-ton mill.

YUKON COPPER CO., LTD.**Y. T., CANADA**

Address: White Horse, Y. T. Dr. Alfred Thompson, pres.; W. D. Greenough, v. p., White Horse, Y. T.; Jas. Smiley, sec.-treas., Ottawa, Can. Inc. November, 1915, in Canada. **Cap.** \$200,000; shares \$100 par, all issued. Company took over holdings of the Atlas Mining Co.

Property: 10 claims, 720 acres, in the valley of Porter creek, 4 to 7 miles west of White Horse, include the Pueblo group of 420 acres, and the Carlisle group of 300 acres.

The Pueblo concession, located 1899, was sold to the White Horse Copper Co. That company immediately bonded it to the British American Corp'n, who relinquished bond in 1901 and property reverted to locator, H. E. Porter. In 1906, the Yukon Pueblo Mines Co. of Spokane, bought the concession, transferring it in 1911 to the Atlas Mining Co., controlled by Greenough Bros. of Spokane.

Geology: The Pueblo orebody is an irregular shaped mass 400' long and 200' wide, running N. W.-S. E. and raking north. It is enclosed in crystalline limestone, near a granite contact, and apparently the limestone replaced by the orebody was cut by granite dikes, traces of which remain. There also is a porphyry dike of 3 to 4' width, crossing the orebody, decomposed and showing copper stains. Ore is essentially cupriferosus hematite, varying in texture from compact to coarse, with some alteration, and with irregular silicification. The copper sulphides in the hematite have been largely altered into carbonates, oxides and silicates, only a little chalcopyrite having been found to depth of 100'. Principal ore mineral is malachite, disseminated in hematite, with considerable chrysocolla, and some cuprite occurring in veinlets and small masses. Ore ranges from 1 to 10% in copper, and 700 tons of roughly sorted ore sent to the Crofton smelter, carried 5% copper, 1.25 to 2 oz. silver and some gold per ton.

Development: by a 400' shaft. Work in 1914 consisted of 28 prospect diamond drill-holes, totaling 3,796' and prospecting deposit for 250' further in depth. Employs 100 men.

The Carlisle mine, 2 miles from the Pueblo, has a vein 15' wide, with a high-grade paystreak up to 4' in width of bornite and chalcopyrite. Developed by shafts of 50' and 137'.

Equipment: includes steam power, a 10-drill air compressor and necessary mine buildings. Mine has a spur line to the White Pass & Yukon railway, built 1910.

Production: 1914, shipped to the Tacoma smelter, was 250 tons of ore per day from the Pueblo mine. Property considered promising.

YUKON GOLD CO.**ALASKA AND CALIFORNIA**

Office: 120 Broadway, New York. Controlled by the Yukon Alaska Trust, inc. 1916 to take over the residuary assets of the dissolved Guggenheim Exploration Co.

Officers: Wm. Loeb, Jr., pres.; Daniel Guggenheim, v. p.; C. K. Lipman, sec.; Leopold Fredrick, treas.; O. B. Perry, cons. engr. and gen. mgr.; above with M. Guggenheim, S. R. Guggenheim, Isaac Guggenheim, F. R. Foraker, E. L. Newhouse, directors. J. K. MacGowan, purch. agt.

Inc. Feb. 28, 1907, in Me. **Cap.**, \$25,000,000 reduced Jan., 1915, to \$17,500,000; shares \$5 par; all issued; \$14,213,125 stock owned by the Yukon Alaska Trust. Guaranty Trust Co., New York, registrar; D. A. Crockett, 120 Broadway, New York, transfer agent. Listed on New York and Boston Curb. Annual meeting 2nd Monday in January, at Augusta, Me.

Dividends: 8% (40c per share) quarterly from Sept., 1909, to Dec., 1911; 6% (30c per share) annually from April, 1912, to date; last payment, June, 1916.

Comparative General Balance Sheet:

Assets:						
	Property & Invest's	Equip.	Def'd Charges	Bullion & Cash	Other Current	Total
1915	\$11,569,474	\$7,039,902	\$548,532	\$469,729	\$1,357,015	\$20,984,652
1914	11,524,181	7,036,424	600,066	195,283	1,509,654	20,865,608
Liabilities:						
	Capital Stock	Guggenheim Expl.	Current	Deprec.	Surplus	Total
1915 ..	\$17,500,000	\$1,500,000	\$158,078	\$1,223,740	\$602,834	\$20,984,652
1914 ...	17,500,000	1,675,000	134,729	987,995	567,884	20,865,608

Comparative Income Account:

	Total Income	Royalties Paid	Amort- ization	Int. Ch's, Exp's., etc	Total Deduct's	Surplus
1915	\$2,121,031	\$542,241	\$248,037	\$245,803	\$1,036,081	\$1,084,950
1914	2,213,126	489,169	534,073	61,577	1,084,819	1,128,307

Property: includes 650 claims in the Klondike district, Alaska, extensive holdings in the Yukon territory, 24 claims on Flat Creek, Iditarod district, Alaska, 130 acres in the Yuba basin, including the Sunset and Gilt Edge claims on the Yuba river, Calif., and 160 acres on Butte Creek, near Chico, Calif. Company operated 3 dredges in California, 7 in the Yukon and 1 at Iditarod, Alaska, during 1915.

Operating Results, 1915:

	Cu. yds.	Gold recovered
Alaska (Iditarod)	926,956	\$845,998
California	3,818,126	437,852
Yukon (dredges at Dawson)	5,041,075	2,456,597
Yukon (hydraulicking at Dawson)	3,031,647	412,535
Total	12,817,804	\$4,152,982

Recovery and Cost, 1915:

	Gold saved per yd.	Cost per yd.
Dredging in Alaska	91.30c	38.70c
Dredging in Yukon	48.73	26.46
Dredging in California	11.46	4.51
Hydraulicking	13.60	7.00

YUKON MINES CO.

COLORADO

Office: J. B. Conger, pres., Century Bldg., Denver. **Mine office:** Parlin, Colo. Inc. in Colo. Cap., \$200,000; shares \$1 par; non-assessable; outstanding, May, 1915, 100,000 shares.

Property: the Alaska and Yukon mines, patented, Cochetopa district, Saguache Co. The ore in the Alaska shaft contains mainly zinc-blende; that in the Yukon vein, gold, silver and copper. **Development:** by 2 shafts, the Alaska shaft being 165' deep. **Equipment:** includes a compressor, and 100-h. p. boiler. Small shipments of copper ore were made in 1914. Lessees on the Alaska shaft have shipped zinc ore.

Property is a prospect undergoing development.

YUMA MINE (Molybdenum)

ARIZONA

Property: 14 miles W. of Tucson, is controlled by Col. Epes Randolph, Tucson, Ariz., and associates. Reported, May, 1916, to be shipping to Tucson ore containing chiefly molybdenum, with about \$3 gold per ton. About \$100,000 is reported to have been spent in equipment and preliminary work. Employs 100 men.

ZAMBONA DEVELOPMENT CO.**MEXICO**

Idle. **Mine office:** Minas Nuevas, Alamos, Sonora, Mex. **Officers:** R. R. Coleman, pres. and treas.; Wm. S. Cranz, v. p.; C. W. Hayes, sec., at last accounts. Is supposed to be owned by Pacific Smelting Co.

Property: includes the Zambona, Purisima and San Antonio mines, said to have produced about \$7,000,000 worth of ore, in the past, carrying native silver, argentite and chalcocite, with values largely in silver. Developed to depth of 730', and by a long crosscut tunnel. There remain about 200,000 tons of low-grade disseminated ore on the dumps, available for milling and cyaniding.

Equipment: includes a steam and electric plant, a 30-stamp mill having 4 Huntington mills and 3 tube mills, and a 100-ton cyanide plant. Idle and company probably dead.

ZINC CONCENTRATING CO.

Officers: L. N. Godfrey, pres., 60 Congress St., Boston, Mass.; Augustus T. Clark, treas.; with D. L. Goff, Jas. B. Etherington, M. B. Ryan, Oscar Hoppe, Herbert H. Brooks, directors.

Cap., \$3,000,000; shares \$10 par; full-paid and non-assessable; all issued. Stock traded in on New York Curb.

Company owns all the patents and rights of the Campbell System of Magnetic Separation and the Dings' Magnetic Separators. The Campbell process has been successfully used at two plants, one at Linden, Wisc., operated by the Linden Zinc Co. and one at Cuba, Wisc., under lease to the Wisconsin Zinc Co. Company claims a regular zinc recovery of 95% and a total ore recovery, zinc, sulphur, iron, of from 85-90%.

The Linden Zinc Co., is reported paying \$9,000 annual royalty for one unit.

ZUMA MINING & MILLING CO.**UTAH**

Eureka, Juab Co., Utah. **Officers:** P. J. Fennell, pres.; Mrs. Mary E. Drescoll, sec.; W. F. Shriver, treas.

Inc. 1907, in Utah. **Cap., \$500,000;** shares 50c par.; 700,000 shares outstanding. Stock listed on Salt Lake Exchange.

Property: 6 claims, 4 patented, in the East Tintic district, near the Crown Point and Iron King mines, said to carry gold-silver-lead zinc ore. Development is by a 270' shaft, 1,000' of tunnels and winze. The shaft is to be sunk to 500', in 1916. **Equipment:** including hoist, engine and compressor, claimed to have cost \$24,000.

CHAPTER V

THE METAL MINING INDUSTRY

The remarkable prosperity of the metal mining industry for 1915 and 1916 is a direct result of the great European war. When this war began in 1914, the sudden lack of demand and cessation of exports of the metals, coupled with slack if not stagnant business conditions in the U. S., led to lowered prices, and a painfully depressed state of the entire industry, but in 1915-16 the truly remarkable demand for copper, zinc and mercury and tungsten, with runaway prices, quickly led to the reopening of many properties long idle and the crowding of output from producing mines.

The following table, showing production for the years 1913-1915, does not disclose this activity, since in the figures for the calendar year the small output for the first half year, combined with the great output of the second half, makes the total nearly normal. The total from July to July would be quite different. The table is from the Engineering & Mining Journal.

PRODUCTION OF METALS IN THE UNITED STATES

Metal	Unit	1913	1914	1915
Aluminum.....	Pounds	49,601,500	(h)45,000,000	(h)80,000,000
Copper (a).....	Pounds	1,225,735,834	1,158,581,876	1,424,640,565
Ferromanganese.....	Long tons	229,834	185,118	232,210
Gold (b).....	Dollars	88,884,400	94,531,800	98,891,100
Iron.....	Long tons	30,736,477	23,147,226	29,738,981
Lead (c).....	Short tons	433,476	538,735	565,356
Nickel (e).....	Pounds	47,124,330	30,067,064	38,966,138
Quicksilver.....	Flasks	(h)20,000	16,300	(f)20,681
Silver (b).....	Troy ounces	66,801,500	72,455,100	67,485,600
Zinc (d).....	Short tons	358,282	362,361	492,495

(a) Production from ore originating in the United States. (b) The statistics for 1913 and 1914 are the final and those for 1915 are the preliminary statistics reported jointly by the directors of the Mint and the U. S. Geological Survey. (c) Production of refined lead from ore and scrap originating in the United States; antimonial lead is included. (d) Total production of smelters, except those treating dross and junk exclusively; includes spelter derived from imported ore. (e) Imports: for 1915, first 9 months only. This nickel is refined in the United States for the production of metal, oxide and salts. (f) As reported by U. S. Geological Survey. (g) As reported by the Metallgesellschaft, Frankfurt am Main. (h) Estimated.

The most important individual producer is the American Smelting & Refining Co., often called the Smelter Trust. This company handles most of the custom ore sold in this country and Mexico, and also has many mines of its own. The metals recovered by its smelters in 1915 were sold for \$232,281,182.

In 1915 this single company received nearly \$55,000,000 for gold produced from the ores handled, equal to more than half the United States production; its smelter extracted over \$38,000,000 of silver from the ores treated, including some from Mexico and Canada.

The copper ore put through its smelters realized \$92,356,662, or over 35% of the country's total production for the year. The lead production, equivalent to over one-half the value of the entire United States production, was sold for over \$27,000,000. These figures explain why the company is so often called the Smelter Trust.

METAL PRICES

The price per unit of metal production (gold excepted, which is fixed by law at \$20.67+ per fine ounce) is based upon averages of daily market prices current at New York for silver, copper and lead, and at St. Louis for metallic zinc or spelter. The prices used by the U. S. Geological Survey for calculation of values for the years 1850-1915, inclusive, are as follows:

PRICES OF SILVER, COPPER, LEAD, AND ZINC.

Year	Silver Fine oz.	Copper Pound	Lead Pound	Zinc Pound	Year	Silver Fine oz.	Copper Pound	Lead Pound	Zinc Pound
1850\$1.32	\$0.22	\$0.05	1883\$1.11	\$0.165	\$0.043	\$0.045

18821.14	.191	.049	.053	1915507	.175	.047	.124

These prices do not accord with the yearly averages reported by the American Metal Exchange, the differences being possibly those between an arithmetical and a geometrical average.

The 25 years (1889-1913) geometric averages for the three metals are as follows: Silver, 66 cts. per oz.; copper, 14 cts. per lb.; zinc, 5.3 cts. per lb.

In the following pages, the essential facts concerning the price, production, consumption, exports and imports of each metal are given in tables.

COURSE OF METAL PRICES SINCE 1879—ANNUAL AVERAGES

Price for Pig Iron up to 1885 represents Foundry No. 1 at Philadelphia.
 Since 1885 the Price of Bessemer Pig Iron at Pittsburgh is given
 x Electrolytic Copper
 All Prices from Eng. and Mining Journal.

ALUMINUM

Aluminum Production and Prices of the United States, in Pounds

Year	Production (lb.)	Price (per lb.)
1883	83	7,150,000
1884	150	7,300,000
1885	283	7,500,000
1886	8,000	8,600,000

Refined	106	69

Mexico :		
Ore	133	17
Metal	4,554	3,849
Portugal (ore)		110
Servia (ore)	186	327
Spain (ore)	110	551

Production in 1913 was approximately 22,000 tons (long tons) of regulus, crude and refined, made up as follows: China, 12,820 tons; France, 6,000; Mexico, 2,315, and Hungary, 860 tons.

The antimony deposits of the U. S. may be classed as those containing antimony only, and those whose antimonial content is a valuable by-product. Though many deposits of stibnite are known, they cannot be worked with normal prices, because in ordinary years the Chinese and Japanese smelters can supply it cheaper than we can produce it, and because the market is limited and easily glutted, resulting in still lower prices. The domestic production has therefore come almost entirely from the electrolytic refining of antimonial lead and copper metal.

The entire world's consumption up to 1914 was less than $\frac{1}{8}$ that of tin or 3% of that of zinc or copper. Antimonial ores to be valuable must be free from arsenic, zinc and lead.

The average price for the 30 years preceding 1914 is 7.5 cts. per pound.

The Market for Antimony. The principal uses of antimony, the demand for which continues to increase, are in making anti-friction bearing metals, white metals for the foundation of silver-plated ware, and other plated ware, such as clock-cases, table-ware, coffin trimmings and toys. In 1915-16 a great demand was created by the use of antimony in making shrapnel bullets.

The following persons are buyers of antimony ores:

Atkins, Kroll & Co., San Francisco, Cal.; Elsasser Merchants Finance Co., 625 Security Bldg., Los Angeles, Cal.; Frazer & Co., 50 Church St., New York City; C. W. Hill Chemical Co., 320 S. San Pedro St., Los Angeles, Cal.; Edw. Hill's Son & Co., Inc., 65 Wall St., New York City; Hoyt Metal Co., St. Louis, Mo.; M. D. Mackay, 130 Pearl St., New York City; Magnolia Metal Co., 113-15 Bank St., New York City; Pennsylvania Smelting Co., Pittsburgh, Pa.; Philipp Brothers, 42 Broadway, New York City; Herbert Solinger, Beer-Sondheimer Co., Newhouse Bldg., Salt Lake City, Utah; C. Solomon, Jr. (Chapman Smelting Co.), 409 Battery St., San Francisco, Cal.; David Taylor, Consolidated Ores Co., Boston Bldg., Salt Lake City, Utah; Wm. Wraith, mgr., International Smelting Co., Salt Lake City, Utah.

In 1915 antimony mines in all parts of the U. S. were reopened, notably those of Pine Creek, in the Coeur d'Alene, and several small furnaces built, due to the increased price of the metal. The largest production was made from deposits near Wild Rose Spring, on the northwest slope of Telescope Peak, in the Panamint Range, Death Valley, Calif. Alaska furnished 800 tons of stibnite ore from the Fairbanks district and from Seward Peninsula. Reported that shippers received from \$1.25 to \$1.75 per unit of stibnite.

Crude antimony is largely used in the making of fireworks, safety-matches, vulcanizing rubber, etc. Oxide of antimony is used for the manufacture of paints, enamels in glass and crystals, and the preparation of antimony salts. Antimony metal is used for hard lead, type-metal, anti-friction compounds and other alloys. It is sold as "starred" metal, and the market not only demands a product assaying 99%, but also that each slab should have the fern-like crystallized surface known as the "star," although this does not indicate that it is chemically pure.

* Production in Canada for 1913 was 1,692 tons valued at \$101,463 and for 1914, 1,737 tons.

The occurrence of arsenic in metal-bearing ores is so common as to be practically universal. This is shown at the smelters treating lead, copper and zinc ores, which send out over 20,000 tons of arsenious trioxide a year into the atmosphere in the form of smelter smoke or fume. A small amount is saved at the Anaconda, Mont., smelter, and at the Ontario smelters treat-

ing Cobalt ores, and also in Mexico by the Mapimi smelter of the American Metal Co.

With such an enormous wastage, it is foolish to attempt to work arsenical ores for the arsenic alone. The chief use of the metal is in glass-making and for insecticides in agriculture; the glass industry uses about half of the amount produced in this country.

BISMUTH

Occurrence. Bismuth ores are comparatively rare, though the metal occurs in many of the lead ores of the Rocky Mountain regions. The U. S. production comes entirely from electrolytic lead refineries at Grasselli, Ind., Omaha, Neb., and a few other plants. The Wilson Cons. Mining Co. produced oxidized bismuth ore in the Clifton district, Tooele Co., Utah, in 1914. The world's supply comes mainly from Bolivian mines owned by Aramayo Francke & Co., at Chorolque and Tasna. This firm produced 511 tons crude metal in the year ending May 31, 1915, compared with 437 tons the previous year.

Occasionally lots of gold-silver or lead ore containing from 10 to 20% bismuth have been marketed in the west, but buyers gave nothing for the bismuth contained.

Prices. The price for bismuth in the U. S., ordinarily about 65 cents a pound, was \$2.75 per lb. at the beginning of 1915; toward the end of the year it sold to \$4 per lb.

The price and market for bismuth ores are both artificial, being fixed by a combination of English and German firms, who absolutely control the market and shut out competition by most drastic and inquisitorial methods. Were American production constant, our producers could secure the American market. The Anaconda smelter dust carries over 1% bismuth, equal to a daily production of 1,580 lbs., and this plant will probably be a producer in 1916.

Uses. Metallic bismuth is employed in making low-fusing alloys or cliché metals which are used in automatic fire sprinklers, fuses for electric wiring, and solders. Some of the salts have a smooth, unctuous feel, and are used in face and toilet powders and in medicinal preparations. It is also employed to a small extent in making optical glasses.

* U. S. Geol. Survey.

Chromic iron ore is sold on the basis of 50% chromic oxide, bringing \$12 to \$30 per ton in New York. Production is almost entirely from California, largely from near Copperopolis, with freight rates of \$11 per ton to the East. The output during the first six months of 1916 was more than three times the greatest annual yield of former years.

Occurrence. The chief producing areas are the belts of serpentine in the Sierra Nevada and Coast ranges. Shasta County is a great producer. Most of the orebodies are small and lenticular in shape, containing only from 1. to 200 tons ore. Quebec, Canada, is also a producer, 10,087 tons being imported from there into the U. S. in 1915. The market is irregular and subject to wide variations.

Use. Chromic iron ore is used in the manufacture of ferrochrome and steel for high-speed tools, armor plate and projectiles and in the manufacture of bichromates of soda and potash, chromic acid, chrome alum and chrome tannage.

WORLD'S PRODUCTION OF CHROMIC IRON ORE, IN LONG TONS. U. S. G. S.

1910.....	14,935	6,352			

No record is kept of the imports of metallic cobalt. The price of the metal seems to have varied little during the last three years, ranging from \$1.50 to \$2 a pound. In Sept., 1915, the Engineering and Mining Journal quoted \$2.00 per lb. 97% cobalt metal.

No cobalt was produced from domestic ores in 1913 and 1914. The cobalt used in making high-priced steels and stellite is generally reduced from the imported oxide. (Stellite is an alloy, 75% cobalt and 25% chromium, said to be especially valuable for making high-speed steels and non-tarnishable cutlery). Experimental work in 1916 has shown that cobalt may be substituted for nickel in plating. Canadian production, mainly from Cobalt, Ont., is as follows:

	Metallic Cobalt	Cobalt Oxide	Total metal
1914.....	242,572 lbs.	899,027 lbs.	871,801 lbs.
1915.....	211,610 lbs.	879,219 lbs.	477,063 lbs.

From Preliminary Report, Mineral Resources of Canada, 1915.

Total	100.0	100.0	100.0

IRIDIUM—See Platinum.

IRIDOSMINE (osmiridium)—See Platinum.

LEAD STATISTICS

The lead production of the U. S. comes largely from three States, Missouri, Idaho and Utah, whose 1915 output was 195,634 tons, 160,680 tons, and 106,105 tons, respectively. Colorado produced only 32,352 tons.

The great bulk of Missouri's output comes from the south-eastern part of the State, where a half-dozen companies work on 3 to 4% disseminated ore. The characteristic of this district is that lead alone, without zinc, is produced. Idaho's production comes from the lead-silver-zinc ores of the Coeur d'Alene district, which in some years leads all others. Utah's production comes mainly from the silver-lead ores of Park City and Bingham and the mixed ores of the Tintic district.

Only 43,029 tons of lead from foreign ore mainly British Columbia and Mexico was refined in the United States last year, compared with 94,984 tons in 1911. The production of lead from domestic ores in 1915 reached the total of 537,012 tons, a healthy increase from 389,211 tons in 1910. Next to the United States, the important lead-producing countries of the world are Spain and Australia.

The vital figures of the industry are given in the following tables:

U. S. LEAD PRODUCTION (SHORT TONS), PRICE AND VALUE

Year.	Desilverized Lead.	Soft Lead.	Total Production.	From domestic ores and base bullion.	From foreign bullion.	From foreign New York.	Price at New York.	Value.

SUMMARY OF LEAD STATISTICS IN SHORT TONS (U. S. G. S.)

	1909	1910	1911	1912
Total production of refined lead in the United States	446,901	470,272	486,979	480,394
Production of desilverized lead in the United States	329,751	328,954	331,032	339,646
Production of soft lead in the United States (including desilverized soft)	149,690	169,270	191,614	171,037
Production of antimonial lead in the United States	12,896	14,069	14,078	13,552
Production of lead from domestic ores	352,339	375,402	391,995	392,517
Production of secondary lead in the United States	41,687	55,422	54,284	67,168
Consumption of lead in the United States (disregarding stocks)	367,504	397,763	353,328	394,159
World production (approximate)	1,164,903	1,210,504	1,227,648	1,332,513
World consumption (approximate)	1,182,212	1,209,055	1,218,914	1,279,746
United States (domestic) percentage of world production	30.3	31.0	32.0	35.6
United States percentage of world consumption	31.1	32.9	29.0	30.8
World rank of United States in production of lead	First	First	First	First
World rank of United States in consumption of lead	First	First	First	First

SUMMARY OF LEAD STATISTICS IN SHORT TONS (U. S. G. S.)

	1913	1914	1915
Total production of refined lead in the United States	462,460	542,122	550,055
Production of desilverized lead in the United States	330,593	333,903	338,584
Production of soft lead in the United States (including desilverized soft)	161,300	201,725	205,462
Production of antimonial lead in the United States	16,665	16,667	23,224
Production of lead from domestic ores	411,878	512,784	507,026
Production of secondary lead in the United States	72,334	61,062	*71,300
Consumption of lead in the United States (disregarding stocks)	414,281	451,371	
World production (approximate)	1,270,458		
World consumption (approximate)	1,290,499		
United States (domestic) percentage of world production	32.4		
United States percentage of world consumption	32.1		
World rank of United States in production of lead	First		
World rank of United States in consumption of lead	First		

* Subject to revision; statistics not yet complete.

	1914	1915	Increase
Lead production of United States (short tons)	542,122	550,055	7,933 or 1.3%
Lead stocks of United States (primary, short tons)	449,052	426,751	22,301 "
Value of lead production of United States	\$42,286,000	\$51,705,000	\$9,419,000 " 22%

LEAD PRODUCTION OF THE UNITED STATES, AND THE SOURCE OF ORE

United States Geological Survey Figures						
Domestic Ore:	1910	1911	1912	1913	1914	1915
Alaska	75	51	46	6	353

Zinc residues	2,237	1,987	3,131	3,785	4,125	4,567
Total from domestic ore.	339,211	405,863	415,395	436,430	534,482	537,012
Foreign Ore:						
Africa	3,310	582	1,774	5,976	2,942
Canada	25	122	29	16	2	1,174
Central America	3	28	1
Mexico	11,704	7,333	7,407	4,512	2,366	5,437
South America	2,996	2,677	2,332	2,617	1,821	2,829
Other foreign	27	22	30	102	488	140
Foreign Base Bullion:						
Mexico	76,805	84,220	76,805	37,359	21,689	33,176
South America	275
Total from foreign ore and base bullion	94,870	94,984	88,377	50,532	29,338	43,029
Grand total, derived from all sources	434,081	500,847	503,772	487,012	563,810	580,044
* Primary lead is that smelted from ore.						
† The value is calculated upon the annual average of the daily quotation for spot lead at New York City.						

STOCKS OF REFINED LEAD AVAILABLE FOR CONSUMPTION IN THE U. S.

(U. S. Geological Survey figures)						
Supply:	1910	1911	1912	1913	1914	1915
Stock in bonded warehouses						
Jan. 1	17,405	35,972	4,481	10,492	5,310	7,668
Imports						
For consumption	15,359	13,281	14,146	11,990	7,336	9,630
For warehouse	98,249	76,671	69,414	45,165	20,952	41,816
Increase by liquidation	2,250
Production from domestic ores	375,402	391,995	392,517	411,878	512,794	507,026
Total supply	501,415	517,919	480,558	479,515	546,442	568,440
Withdrawn:						
Exports of foreign lead—						
From warehouse	69,786	101,227	64,906	44,544	21,545	38,445
In manufactures, with benefit of drawback	8,309	12,080	11,320	9,757	9,399	3,993
Exports of domestic lead	53,722	57,092
Decrease by liquidation	7,661	14,812	5,692	419	56
Stock in bonded warehouses						
Dec. 31	35,972	4,481	10,492	5,310	7,668	12,169
Total withdrawn	122,219	132,600	92,410	60,030	97,390	141,639
Available for consumption	379,196	385,319	388,148	419,485	449,052	426,751

Production of Secondary Lead in the United States

Pig lead	29,492	27,369	30,266	33,104	29,337	36,800

Lead Smelters and Refineries in North America in 1914

(Most important plants in blackface type.)

UNITED STATES

ARIZONA:

Mowry—Consolidated Mines, Smelter & Transportation Co. (Idle.)

CALIFORNIA:

Keeler—Four Metals Mining & Smelting Co. (Idle.)

- Needles—Needles Mining & Smelting Co. (Subsidiary of U. S. Sm. Ref. & Mng. Co. (Idle.)

Selby—Selby Smelting & Lead Co. Refinery also. Am. Smelters Sec'y Co.

COLORADO:

Denver—Globe plant, American Smelting & Refining Co.

Durango—Durango plant, American Smelting & Refining Co.

Georgetown—Western Metals Co. Malm dry chlorination process.

Leadville—Arkansas Valley plant, American Smelting & Refining Co.

Pueblo—Pueblo plant, American Smelting & Refining Co.

Salida—The Ohio & Colorado Smelting & Refining Co.

IDAHO:

Clayton—Red Bird Smelting Co.
 Enaville—North Fork Smelting & Mining Co. (Idle.)
 Ponderay—Idaho Smelting & Refining Co. (Idle.)
 Sea Foam—Greyhound Mining & Milling Co. (Idle.)

ILLINOIS:

Aurora—Aurora Metal Co. Secondary metals, but some ore also.
 Chicago—Goldsmith Bros.' Smelting & Refining Co. Secondary lead, but some ore.
 Chicago—Great Western Smelting & Refining Co. Secondary lead, but some ore.
 Chicago—National plant, American Smelting & Refining Co. Refinery only. Dismantled at end of 1914.
 Collinsville—St. Louis Smelting & Refining Co. Refinery also. Nat'l Lead Co.
 Federal—Federal Lead Co. Am. Smelters Sec. Co.
 Granite City—Hoyt Metal Co. Smelts secondary lead, but also some ore.

INDIANA:

East Chicago—International Lead Refining Co. Refinery only. Intern'l Sm. & Ref. Co.
 East Chicago—U. S. Reduction Co. Smelts secondary lead and some ore.
 Grasselli—United States Metals Refining Co. Refinery only. Betts electrolytic process.

IOWA:

Dubuque—J. W. Watters. Not operated for some years.

KANSAS:

Galena—Galena Smelting & Manufacturing Co.

MISSOURI:

Desloge—Desloge Consolidated Lead Co.
 Granby—Granby Mining & Smelting Co.
 Herculaneum—St. Joseph Lead Co.
 Joplin—Picher Lead Co.
 Valle Mines—Valle Mining Co. Not operated for some years.
 Webb City—Webb City Smelting & Manufacturing Co.

MONTANA:

Cooke—Western Smelting & Power Co. (Idle.)
 East Helena—East Helena plant, American Smelting & Refining Co.
 Helena—Northwestern Metals Co. Dry chlorination process. (Idle 1915.)

NEBRASKA:

Omaha—Omaha & Grant Smelting Co. Refinery only. Betts electrolytic process. Am. Sm. & Ref. Co.

NEVADA:

Nelson—Santa Barbara Searchlight Mining Co. (Idle.)
 Spruce—Black Forest Mines & Smelting Co. (Idle.)

NEW JERSEY:

Newark—Balbach Smelting & Refining Co. Refinery also.
 Perth Amboy—Perth Amboy plant, American Smelting & Refining Co. Refinery also.

NEW MEXICO:

Deming—National Mining & Smelting Co. (Idle.)

PENNSYLVANIA:

Carnegie—Pennsylvania Smelting Co. Refinery also.

TEXAS:

El Paso-Kansas City Consolidated Smelting & Refining Co. (Am. Sm. Ref. Co.)

UTAH:

Midvale—United States Smelting Co. (Subsid. U. S. Sm., Ref. & Mng. Co.)

Murray—Murray plant, American Smelting & Refining Co.

Silver City—Tintic Smelting Co. (Idle several years.)

Tooele—International Smelting Co.

WASHINGTON:

Keller—Keller & Indiana Consolidated Smelting Co. (Idle several years.)

Northport—Northport Smelting & Refining Co.

WISCONSIN:

Dodgeville—Blue Mounds Mining & Smelting Co. (Idle.)

Waukesha—Northern Smelting Co. (Idle.)

CANADA

BRITISH COLUMBIA:

Trail—Consolidated Mining & Smelting Co. of Canada (Ltd.). Refinery also. Betts electrolytic process.

ONTARIO:

Kingston—North American Smelting Co. (Ltd.)

MEXICO

AGUASCALIENTES:

Aguascalientes—American Smelting & Refining Co.

CHIHUAHUA:

Chihuahua—American Smelting & Refining Co.

Uruachic—Uruachic Mining & Smelting Co. (Ltd.)

COAHUILA:

Saltillo—Mazapil Copper Co. (Ltd.)

Torreón—Compañía Metalúrgica de Torreón.

DURANGO:

Asarco (Velardena)—American Smelters Securities Co.

Mapimi—Compañía Minera de Penoles. (Am. Metal Co.)

GUERRERO:

Campo Morado—Reforma Mining & Milling Co. (Idle.)

NUEVO LEON:

Monterey—American Smelting & Refining Co.

Monterey—Compañía Minera, Fundidora y Afinidora, S. A. Refinery also.

SAN LUIS POTOSI: Plant wrecked by revolutionists, 1914.

Matehuala—American Smelters Securities Co. (National Metallurgical Co.)

San Luis Potosi—Compañía Metalúrgica Mexicana.

SONORA:

Guaymas—Pacific Smelting & Refining Co. (Mexican-American Smelting & Refining Co., Ltd.) (Idle and never operated.)

Ures—Yaqui Smelting & Refining Co., S. A. Refinery also. (Idle.)

ZACATECAS:

Chalchihuites—National Smelting Co. (Idle.)

MANGANESE

Manganese ore, to be salable, must contain 35% or more manganese, and for ferromanganese or ferro, 40% or better, with less than 8% silica, and not over 0.2% phosphorus. As 90% of the manganese ore used in the U. S. goes into ferro, the demand is chiefly for high-grade ore. For dry batteries, the ore must contain 50% manganese, present as manganese dioxide, and less than 1% iron or ½% copper, nickel or cobalt.

MOLYBDENUM

The amount of molybdenum produced in the U. S. has never exceeded a few tons a year and the annual consumption is unknown. Imports comprise but small quantities of molybdenite, the sulphide ore, and some wulfenite, molybdenum metal, and ferro-molybdenum.

The world's supply, mostly molybdenite, comes from New South Wales, Queensland and Norway. In 1915, the Primos Chemical Co. operated a molybdenite mine at Camp Boericke near Empire, Colo., and several other properties in the same state were worked on a small scale. A little was mined in Washington. In British Columbia a molybdenum mine, 13 miles from Anyox, is reported to have a 50-ton flotation plant, which was expected to start operating by Aug., 1916.

Uses: Molybdenum has rather limited uses and while it can be used instead of tungsten in high speed steels and in the manufacture of ordnance, such use is practically prohibited in the U. S. by the Halcomb patent. The metal is also used in electric resistance furnaces as supports for filaments in electric light bulbs, and Roentgen ray tubes and in alloys such as stellite. The salts have a limited use in chemical technology.

As noted above the use of molybdenum by American steel manufacturers has been greatly retarded if not prohibited by the Halcomb patent, issued in 1903, and held by the Crucible Steel Co. This controls the manufacture of the best grades of molybdenum-steel, using quantities of 6 to 15% molybdenum, less than 1.2% carbon and 2% silicon; the patent also controls the use of chromium in practicable amounts in conjunction with steels of the composition specified. France and Germany make large quantities of molybdenum steel. The results in those countries make it certain that when the Halcomb patent expires the use of molybdenum in America will be quickly extended and its production receive a sudden stimulus. The metal is more abundant than tungsten, and the exhaustion of the richer bodies of tungsten ore is likely to result in a maintenance of a price so that molybdenum will become a strong competitor.

An average price for molybdenite cannot be given. Production and demand have been small and irregular; most of the molybdenite being bought by individual bargaining. The price has ranged in general, from 15 to 30c per lb. for molybdenite, containing 92% MoS₂, until the past couple of years; during 1915-16 it sold as high as \$2 per lb. for 92% molybdenite; such prices are of course ephemeral. In 1915 Canada produced 28,600 tons of molybdenite, valued at \$28,460.

Ore Buyers:

The following firms are users and buyers of molybdenite: J. T. Baker Chemical Co., Phillipsburg, N. J.; Baker & Adamson Chemical Co., Easton,

Pa.; Foote Mineral Co., 107 N. 19th St., Philadelphia, Pa.; Goldschmidt Thermit Co., 90 West St., New York; Primos Chemical Co., Primos, Pa.; S. Schaaf-Regelman, 21 State St., New York; Henry E. Wood & Co., 1734 Arapahoe St., Denver, Colo.; York Metal & Alloys Co., York, Pa.

The following companies and individuals are producers, 1916:

American Molybdenum Co., Yucca, Ariz.

Arizona Rare Metals Co., Tucson, Ariz.

Duquesne Mining & Reduction Co., Box 45, Pittsburgh, Pa. Claims 20 miles from Patagonia, in Patagonia district, Santa Cruz County, Arizona. Postoffice of claims, Duquesne, Ariz.

Thompson & Porter, 322 Story Building, Los Angeles, Cal.

Primos Chemical Co., Primos, Pa. Claims at Camp Boericke, in Clear Creek County, Colorado.

Pingrey Mines & Ore Reduction Co., Leadville, Colo. Claims are on Bartlett Mountains, $1\frac{1}{4}$ miles from Climax, 10 or 15 miles from Leadville, Colo., in Summit County.

Montana Molybdenum Mining Co., Chico, Mont. Claims are in Emigrant district, 9 miles from Chico, in charge of L. A. Van Horn.

Margarito Romero, Las Vegas, N. Mex.

C. H. Gibbs, Geologist, Utah Fuel Co., Salt Lake City, Utah. Interested with Fred Redmond in claims about 2 miles west of Alta, in Little Cottonwood canyon.

Empire Molybdenite Mining & Milling Co., Spokane, Wash. Claims in T. 37 N., R. 44 E., in Metaline district, Pend Oreille County, Washington.

Aurelia Crown Point Mines, Box 187, Seattle, Wash. Property at Lucerne, Lake Chelan district, Chelan County, Washington.

NICKEL

Nickel ores, as such are not mined in the U. S., though nickel is saved as a by-product in electrolytic refining of copper, and marketed both in the form of sulphate and as the metal. In 1914 an equivalent of 845,334 lbs metallic nickel, valued at \$313,000 was produced in this way; it collects in the electrolyte slime and is obtained from there.

Nickel occurs in small amounts in many copper ores, being found in blister copper (in pounds per hundred tons), from the following smelteries: Anaconda, Mont., 22; Great Falls, Mont., 68; Garfield, Utah, 40; Steptoe, Nev., 64; Omaha, Neb., 644; Mountain, Cal., 172; Tacoma, Wash., 770; Aguascalientes, Mex., 132; Cerro de Pasco, Peru, 32; Mount Lyell, Tasmania, 166.

The world's supply comes mainly from Ontario and is imported into the U. S., in the form of copper nickel matte, or as Monel metal from the International Nickel Co.'s smelter at Copper Cliff, Ont., from ores mined at Sudbury, Ont. The refineries are located at Constable Hook, Bayonne, N. J. A much smaller quantity of rich matte has also been imported from Belgium and refined at New Brunswick, N. J., by the United States Nickel Co.

Canada also produces nickel from the silver ores of the Cobalt district and those of the Alexo mine at Temiskaming. The smelters and refineries treating the Cobalt output make nickel oxide and in 1915 also made refined metallic nickel. The Sudbury, Ontario, smelters produced a Bessemer matte, the 1915 output being 67,703 tons holding 39,216,165 lbs. copper and 68,077,823 lbs. nickel. Exports amounted to 66,410,400 lbs. nickel, val-

ued at 11.13 cts. per lb., while the refined metal exported from the U. S. was valued at 37.95 cts. compared with 34 cts. in 1914.

The market price for 1915 varied from 45 to 50 cts. per lb. for ordinary forms.

Use: large amounts of nickel are used in the manufacture of armor plate which requires 3 to 4% nickel; it is used in bridge and structural steel; in automobile manufacture, in axles, steering gear, etc.; in the manufacture of German silver and is a constituent of Monel metal, the converter product of the Sudbury ores which carries 67% nickel, 28% copper, and 5% other metals.

PALLADIUM—See Platinum.

PLATINUM

The U. S. production of platinum is very small and the supply comes chiefly from Russia. The 1915 domestic production of 6,495 ounces is obtained mainly from the refining of gold and copper bullion of both domestic and foreign origin, but placer mines supplied 742 ounces.

Use: One of the most important uses of platinum is as a catalyzer in the manufacture of fuming sulphuric trioxide; in this use it is technically known as "contact mass," some of which contains as much as 7 to 8% of platinum. The loss in good practice is small. Platinum dishes and utensils are a necessity in chemical laboratories. Its use in the electric industry and in dentistry is becoming less each year, nichrome replacing it in electrical appliances.

The embargo placed upon the export of platinum from Russia at the beginning of the war is the cause of the greatly reduced imports in 1914.

THE PLATINUM METALS

Iridium: The price of iridium remains much higher than that of platinum, because of its relative scarcity and its usefulness in hardening platinum. It is a frequent mistake of the platinum miner to speak of iridosmine as "iridium." Iridosmine is an alloy of osmium and iridium, with osmium varying from 17 to 49%. There is practically no market for osmium, except the use as pen points; iridosmine is valuable for the iridium content only. The extraction of osmium is both very costly, and dangerous on account of the poisonous character of the osmium vapor.

Palladium: The marketable supply for 1915 increased on account of the greater care taken by the copper refineries in extracting it from the electrolytic slimes in which it occurs with gold, silver, etc., particularly in the slime of Canadian matte, and the base bullion from Australia and elsewhere. The use of palladium as a catalyzer is well known, and is largely used as an alloy for platinum, as it renders the platinum lighter and of a more brilliant white.

Osmium: The supply of this metal of the platinum group exceeds the demand, tungsten having replaced it in electric light bulbs, and its use in medicine and in silk dyeing being slight.

PLATINUM-GROUP METALS IMPORTED IN THE UNITED STATES

	Domestic		1913		1914		1915

Some of the more important buyers of crude platinum and sweeps are listed below:

- American Platinum Works, Newark, N. J.
- Baker & Co. (Inc.), Newark, N. J.
- J. Bishop & Co., Malvern, Pa.
- Commercial Research Co., Long Island City, N. Y.
- Thomas J. Dee & Co., Chicago, Ill.
- Elizabethtown Smelting Co., Newark, N. J.
- Goldsmith Bros. Smelting & Refining Co., Chicago, Ill.
- Pacific Platinum Works, Los Angeles, Cal.
- Roessler & Hasslacher Chemical Co., Perth Amboy, N. J.
- S. S. White Dental Manufacturing Co., Philadelphia, Pa.

PALLADIUM PRODUCERS

- American Smelting & Refining Co. Nevada
- Boss Gold Mining Co. Nevada
- Oro Amigo Platino Mining Co. Nevada

PLATINUM PRODUCERS

- American Smelting & Refining Co. Nevada
- Asurite Mining Co. Nevada
- Boss Gold Mining Co. Nevada
- Hecla Consolidated Mines Co. (Idle) Wyoming
- Irvington Smelting & Refining Co. (Refinery) New Jersey
- Oro Amigo Platino Mining Co. Nevada
- Platinum Mining & Milling Co. Wyoming

PYRITE

Pyrite mining is an important industry at several localities in the U. S., but its sole use being for sulphuric acid manufacture, the market is limited by transportation costs and by the competition of the copper and zinc smelting plants, at which such acid is made, the principal ones being at Ducktown, Tenn., and Hillsboro, Danville, Peru, La Salle, Springfield and East St. Louis, all in Illinois; Langeloth and Donora, Penna., Argentine, Kansas and Clarkesburg, W. Va. The bulk of the pyrite consumed in the U. S. still comes from Spain, the value and the amount of the imported article being over 3 times that of the domestic production.

QUICKSILVER

Most of the domestic supply of quicksilver comes from California and Nevada, Texas producing the remainder, as Arizona has as yet only a very small output. In 1914 there were 30 producers, including small prospects, 7 more than in 1913. In recent years much of the California output has been from old mines, whose richest ore was extracted long ago and which are now difficult to operate profitably, except when the price is high.

Beside the new supply each year there is also recovered an annual output of old quicksilver in the clean-up of old amalgamation mills, and from other sources; this supply has but little effect on the market. Austria, Italy and Spain furnish 5/6 of the world's supply.

Quicksilver is used mainly in the manufacture of fulminate of mercury for explosive caps, of scientific and electric apparatus, of drugs and in the recovery of precious metals; the latter use is gradually diminishing. It is also used in manufacturing paints for protective coatings.

The primary domestic market for quicksilver is San Francisco; the price is averaged from the market quotations published in the Mining and Scientific Press. Prices are given in dollars per flask of 75 lbs.

MONTHLY AVERAGE PRICES OF QUICKSILVER

RADIUM—(See Uranium, Vanadium)

Radium, uranium and vanadium are closely connected, in occurrence and always found together in an ore. Colorado and Utah contain the largest known radium-bearing deposits of the world, but Europe has been the chief market for the ore, which accounts for the greatly reduced output for 1915. In 1913, over 100 teams were hauling the waste dumps and tailing from the carnotite mines of Paradox Valley to the railway to be shipped to Germany for fertilizer.

PRODUCTION FROM CARNOTITE ORES

	Uranium Oxide	Radium	Vanadium
1915.....	29.4 tons	6 grams	685 tons
1914.....	87.2 tons	22.3 grams	435 tons
1913.....	41 tons	10.5 grams
1912.....	26 tons	6.7 grams

Carnotite is a complex ore consisting essentially of vanadium oxide or with potassium as double silicate, and associated with or loosely combined with uranium oxide. A ton of ordinary carnotite ore assaying about 2½% uranium oxide contains only 12.5 milligrams radium, or one part out of a hundred million, recoverable radium. For companies producing carnotite or other uranium ores, see Uranium, in this chapter. The following firms are producers of radium:

Standard Chemical Co., Pittsburgh, Pa.

W. L. Cummings Chemical Co., Lansdowne, Pa.

Radium Company of America, Sellersville, Pa.

Schlesinger Radium Co., Box 1316, Denver, Colo.

Carnotite Reduction Co., 2600 Iglehart Court, Chicago, Ill.

National Radium Institute, Inc., Longpark, Colo.

RADIUM MINES

 Penna. Mining, Power & Reduction Co. (Ore contains uranium and vanadium).....Colorado

Radium Mines Co. (Vanadinite not found in commercial quantities).....Arizona
 Rare Metals Co. (Operates a custom mill).....Colorado

SELENIUM

The commercial supply of selenium is obtained from the slimes or muds, resulting from the electrolytic refining of blister copper.

SELENIUM RECOVERED FROM 100 TONS OF BLISTER COPPER

Smelter supplying blister copper—	Selenium Pounds	Smelter supplying blister copper—	Selenium Pounds
Garfield, Utah.....	56	Tacoma, Washington.....	42
Stephens, Nevada.....	110.1	Aguascalientes, Mexico.....	170
Omaha, Nebraska.....	28.	Cerro de Pasco, Peru.....	12.7
Mountain, California.....	38	Mount Lyell, Tasmania.....	42

Eilers, A., Notes on the occurrence of some of the rarer metals in blister copper: Am. Inst. Min. Eng. Trans., vol. 47, pp. 217-218, 1914.

Eilers comments as follows:

Garfield, Utah, copper comes from the Bingham porphyry copper mines.

Stephens, Nev., blister copper is from the Nevada Consolidated porphyry deposits.

Omaha, Nebr., blister copper comes from concentrated copper-lead mattes from the lead-silver plants of the Rocky Mountain region.

Iron Mountain, Cal., ores occur in connection with diorite(?).

Tacoma, Wash., the blister is produced from Pacific coast and Alaska copper ores.

Aguascalientes, Mexico, blister is produced from the smelting of silver and gold ores with mostly low-grade copper ores, coming from all parts of Mexico and from many different geological occurrences and connections.

Cerro de Pasco, Peru, blister from copper and lead-copper mattes produced at the Cerro de Pasco works. Ore originates in veins occurring in limestone near andesite masses.

Mount Lyell, Tasmania, blister is from the well-known low-grade copper deposit of Tasmania, in schists.

Selenium is ordinarily sold in small pigs, in sticks ½" thick by 4" in length, and also in a fairly coarse powder form. It is an amorphous brilliant black substance which looks much like pitch or one of the asphalts.

Use: Selenium is chiefly used in coloring glass to which it gives a red color. The unique property possessed by this metal of an increasing electrical resistance with decrease of light has led to the invention of many electrical wonders including Hammond's dirigible torpedo as well as in measuring Roentgen rays; in controlling electric signs, moving pictures, street lights and the flame on gas buoys; in transmitting pictures over a wire. It is also used medicinally to a small extent.

SILVER

Average monthly prices of silver per ounce, as published by "The American Metal Market":

	1903	1905	1910	1911	1912	1913	1914	1915	1916
January	47.57	60.89	52.37	53.79	58.22	62.38	57.56	48.89½	56.77
February	47.89	61.02	51.53	52.22	59.04	61.64	57.50½	48.48	56.75

Phelps, Dodge & Co.	1,388,149	450,000
Tonopah Belmont Development Co.	2,968,565 ²	1,500,000
Tonopah Mining Co.	3,000,000 ³	1,000,000

¹ Year ended Sept. 30, 1915. ² Year ended Feb. 28, 1916. ³ Estimated.

CANADA

	Production, Oz.	No. of Shares Issued
Beaver Consolidated	900,000 ¹	2,000,000
Ruffalo Mines	822,791 ⁷	1,000,000
Conlagas	2,002,054 ²	600,000
Crown-Reserve	657,395	1,999,957
McKinley-Darragh Savage	1,112,976 ⁵	2,247,692
Temiskaming & Hudson Bay	393,360 ³	7,761
Kerr Lake	2,036,962 ⁴	600,000
La Rose	1,368,247 ³	1,498,627
Nipissing	9,097,391	1,200,000
Seneca-Superior Silver Mines	2,047,150	478,884
Temiskaming Mining Co.	278,961 ⁵	2,600,000
Consolidated Mining and Smelting Co.	2,230,500 ⁶	58,952

¹ Year ended Feb. 28, 1915. ² Year ended Oct. 31, 1915. ³ Year ended Aug. 31, 1914. ⁴ Year ended Aug. 31, 1915. ⁵ Calendar year 1914. ⁶ Year ended Sept. 30, 1915. ar ended April 28, 1915.

The first four are metallurgical companies whose production is largely derived from ore purchased; the bulk of the Anaconda and U. S. Smelting productions comes from their own mines.

The Butte & Superior being a zinc-mining company, the silver actually recovered is considerably less than is the content of the ore.

TIN

Very little tin is produced in this country, and the most of it comes from Alaska; in 1914 South Dakota furnished a few hundred lbs. of stream tin. Workable deposits exist near Deeth, Nevada, and El Paso, Texas. Practically all the tin used in the U. S. is brought from Europe and the Straits Settlements. Bolivia ranks second to the Straits as a tin producer; its ores were formerly sent to Europe for reduction, but the reverberatory tin-smelting plant of the American Sm. & Ref. Co. at Perth Amboy, N. J., built to handle Bolivian concentrates, will materially change conditions. This plant was blown in March 1, 1915, and the first crude tin drawn off March 7. This metal is refined electrolytically, at the plant.

UNITED STATES TIN PRODUCTION (U. S. GEOL. SURVEY)

Year	Tons Concts.	Percent Tin	Value
1914	157.5	66	\$ 66,560
1818	84	60	36,970
1912	147	60	124,800
Secondary tin recovered in the United States:			
1915		Tons	Value
		18,650	\$10,544,180
1914		12,447	8,887,158

The U. S. is the largest user of tin among the countries of the world and hence a large importer of the metal. The U. S. Steel Corporation is the greatest single user of the metal.

From American Metal Market.

TITANIUM

Titanium is obtained from the two minerals rutile, titanite, 60% titanium and ilmenite or titanite iron ore FeOTiO_2 , with 31.6% titanium. The supply of rutile comes from Virginia, being mined by the American Rutile Co. at Roseland, Nelson Co.

Rutile is used for making ferrotitanium, used in cast iron and steel, in electrodes for arc lamps, in dyeing leather and wool and in chemicals. A little ilmenite has been used in making ferrotitanium and arc lamp electrodes. Figures of output are not available.

TITANIUM MINE

American Rutile Co. Virginia

TUNGSTEN

The 1915 production of tungsten ores in the U. S. broke all previous records while that for the first six months in 1916 exceeded the production of the U. S. or that of any other country in any previous twelve months. This increased output was due to the demand for high-speed tungsten tool steel required for completing war orders in the U. S. and abroad. Prices soared with demand; starting from \$5.80 to \$9 per unit for 60% ore early in 1915 they reached \$66 per unit early in 1916; by the end of March some ore sold for \$93.50 per unit at the mills. Consumption could not keep pace with production; prices dropped and by July 60% ore was selling around \$25 per unit; by the middle of August sales were made as low as \$20 per unit. Previous to 1915 the highest price reported was \$15 per unit, paid in 1907; normal price has been \$6 to \$7.

All tungsten ores in Great Britain are under the control of the government and they are sold at the uniform price of 55 shillings per unit of a long ton, that is 55 shillings for 22.4 pounds of tungsten trioxide, WO_3 . George T. Holloway, 13 Emmett Street, Limehouse, London, England, probably would furnish a good connection between seller and government.

The demand is lessening and the prices are dropping. Fifteen dollars is probably the top price (per unit). The unit in the United States is 1 per cent of a short ton in tungsten trioxide, that is 20 pounds WO_3 .

During the first six months of 1916 Colorado led in production of tungsten ores with 1,505 tons valued at \$3,638,000; California output was 948 tons valued at \$3,005,000; Arizona, 175 tons, worth \$565,000. Smaller quantities were mined in a number of other states. During first five months of 1916 imports totaled about 1,520 tons valued at \$3,449,311; this came from South America, mainly, with some from Japan and Mexico.

Besides its use for high-speed tool steel a small amount of tungsten is used for incandescent electric lamp filaments, but the amount required is small, for contact points in automobile spark plugs, spark coils and telegraph relays.

There are 10 tungsten mills in the Nederland district, Boulder Co., Colo., 4 at Dragoon, 3 at Arivaca and one at Yucca, Ariz., and one each at Atolia, Bishop, Gaffs, Johannesburg and Nipton, Calif. The two mills working at Sodaville, Nev., complete the list as far as known. Connecticut, Alaska, South Dakota, Missouri, Idaho and Washington are small producers.

U. S. Production of Tungsten, 1916 (Six Months)

	Tons	Value
Arizona	175	\$ 56,500
California	984	3,006,000
Colorado	1,505	3,638,000
Nevada	461	1,432,000

1916 Production of Different Kinds of Tungsten Ores

	Tons	Value
Ferberite ore	1,495	\$3,590,000
Scheelite ore	1,404	4,322,000
Wolframite ore	201	613,000
Hübnerite ore	185	587,000

Buyers of tungsten ores include Primos Chemical Co., Foote Mineral Co. and others, whose addresses are given in the advertising pages of the book.

URANIUM

As Uranium is the source of radium, the production of uranium ore has already been given under radium. Uranium ores occur in many places in the United States, but are found in greatest abundance in the Paradox Valley region of Colorado and Utah. The following list of producing properties, practically covers the field.

Colorado-Utah Carnotite Mines Co., Grand Junction, Colo. Claims in Grand County, Utah.

Consolidated Uranium & Vanadium Co., Uranium, Colo.

German-Belcher Mines, Central City, Colo.

Curran & Hudson, Naturita, Colo.

A. C. Titcomb, Uranium, Colo.

Ike W. Stevens, Cedar, Colo.

Cliff Mines, Nucla, Colo.

American Rare Metals Co., Cedar, Colo.

A. M. Wilson, Naturita, Colo.

E. T. Herrmann, 1738 Broadway, Denver, Colo.

Ward & Reams, Nucla, Colo.

Ewing Williams, Redvale, Colo.

J. M. Belisle, Norwood, Colo.

J. S. McArthur & Co., Glasgow, Scotland. Claims at Greenriver, Utah.

VANADIUM

Vanadium occurs with uranium in carnotite, the mineral of greatest commercial importance. When vanadium is 14% and uranium but 3% the mineral is a dark olive green; when the uranium content is 20%, the mineral is a beautiful yellow. The ore is usually low-grade, 2% to 4%, but of widespread occurrence, the sandstone looking as if dusted with sulphur.

The American Vanadium Co. is said to control 92% of the world's vanadium supply, the metal selling for \$5,000 to \$6,000 per ton. The demand is for vanadium steel, used in aeroplane construction, in automobiles, for military helmets and wherever extreme strength and lightness are required.

The two principal producers in the United States are:

Primos Chemical Co., Primos Pa. Mines at Vanadium, San Miguel County, Colo.

Standard Chemical Co., Pittsburgh, Pa. Mines at Minas Ragra, Peru.

VANADIUM MINES

American Vanadium Co.	Shattuck-Arizona Copper Co. Arizona
..... Pennsylvania	Standard Chemical Co.
Primos Chemical Co. Colorado (etc.) Colorado-Utah

ZINC (SPELTER)

Zinc mining has been a war industry in 1915-16, the prices exceeding those ever known. The American smelters handled 1,257,528 tons of ore in 1915, compared with 872,767 in 1914; 489,514 tons spelter in 1915, compared with 353,049 in 1914, and a production for the first half of 1916 of 316,205 tons, equivalent to only 622,410 tons of metal if production continues at the same rate. The production of electrolytic zinc, begun in 1916 with 252 tons, will be an important factor in 1916, probably reaching 60,000 tons. Prices having fallen, it is safe to say that production will diminish somewhat.

"Prime Western Spelter" shall be Virgin Spelter resulting from the distillation of zinciferous material and shall not contain on the average, in excess of 2% Lead and .08% Iron.

In case of dispute one Slab out of every ten shall constitute a proper sample.

Remelted Spelter shall not be a good delivery.

This ruling goes into effect at once, and replaces Rule 1 of the Spelter Trade Rules.

C. MAYER,

Secretary.

New York, August 31, 1916.

An illustration of the effect of the abnormal price upon the earnings of zinc companies is shown in the Butte & Superior returns. In 1914, with zinc averaging 4.94c per pound, the net profit was \$372,984 or \$3.90 per ton, treating 18.28% ore. In the first quarter of 1916, with zinc at 16.1c, the profit was \$3,554,939, or \$21.55 per ton, treating 15.69% ore.

The ore supply heretofore from many small mines is now in large part from a few large properties, the Butte and Superior mine and its neighbor the Elm Orlu at Butte, Mont., and the Consolidated Interstate-Callahan at Wallace, Idaho, these mines furnishing a third of the entire American production. The introduction of flotation concentration has entirely altered the ore situation at many mines. Oxidized or calamine ores furnish about 29% of the production.

STATE MINE INSPECTORS, COMMISSIONERS, ETC.

State	Name and Address
Alabama	C. H. Nesbit, Chief Mine Inspector, Birmingham.
Alaska	Sumner S. Smith, Mine Inspector, Juneau.
Arizona	C. H. Boltin, State Mine Inspector, Phoenix.
Arkansas	Charles F. Willis, Director, State Bureau of Mines. John H. Page, Commissioner, Bureau of Mines, Manufactures and Agriculture, Little Rock; John T. Fuller, State Mineralogist; Tom Shaw, State Mine Inspector, Midland.
California	F. McN. Hamilton, State Mineralogist, San Francisco.
Colorado	Fred Carroll, Commissioner.
Idaho	James Dalrymple, State Inspector of Coal Mines, Denver. R. N. Bell, State Mine Inspector, Boise.
Indiana	Michael Scollard, Deputy Inspector of Mines, Indianapolis.
Iowa	E. M. Gray, President, State Mining Board, Des Moines.
Kansas	John Pellegrino, Chief Mine Inspector, Pittsburg.
Kentucky	C. J. Norwood, Chief Inspector of Mines, Lexington.
Maryland	William Walters, State Mine Inspector, Midland.
Minnesota	F. A. Wildes, State Mine Inspector, Hibbing.
Missouri	George Bartholomaeus, Secretary, Bureau of Mines and Mine Inspection, Jefferson City. George Hill, Chief Mine Inspector, Berier.
Montana	W. B. Orem, State Mine Inspector, Helena.
Nevada	A. J. Stinson, State Mine Inspector, Carson City.
New Mexico	Rees H. Beddow, State Mine Inspector, Gallup.
New York	W. W. Jones, State Mine Inspector, Albany.
North Dakota	James W. Bliss, State Engineer, Bismarck.
Ohio	J. M. Roan, Chief Deputy, Division of Mines, Columbus.
Oklahoma	Ed. Boyle, Chief Inspector, McAlester.
Oregon	H. M. Parks, Director, Bureau of Mines, Corvallis.
Pennsylvania	James Roderick, Chief, Department of Mines, Harrisburg.
South Dakota	Otto E. Ellerman, State Mine Inspector, Lead.
Tennessee	R. A. Shiffett, Chief Mine Inspector, Nashville.
Texas	I. J. Broman, State Mine Inspector, Austin.
Utah	J. E. Pettit, State Mine Inspector, Salt Lake City.
Virginia	Capt. Richard E. Roane, Mine Inspector, Richmond.
Washington	James Bagley, State Inspector of Coal Mines, Seattle.
West Virginia	Earl Henry, Chief, Department of Mines, Charleston.

STATE GEOLOGISTS

Alabama	Eugene A. Smith, University.
Arkansas	N. F. Drake, Fayetteville.
Connecticut	William N. Rice, Supt., State Geol. and Nat. History Survey, Hartford.
Colorado	R. D. George, Director, Boulder.
Florida	E. H. Sellards, Tallahassee.
Georgia	S. W. McCallie, Atlanta.

Illinois.....	F. W. DeWolf, Director, Urbana.
Indiana.....	Edward Barrett, Indianapolis.
Iowa.....	George F. Kay, Des Moines.
Kansas.....	W. H. Twenhofel, Lawrence.
Kentucky.....	J. B. Hoeing, Frankfort.

Rhode Island.....	Charles W. Brown, Providence.
South Dakota.....	Freeman Ward, Vermillion.
Tennessee.....	A. H. Purdue, Nashville.
Texas.....	J. A. Udden, Director, Bureau of Economic Geology, Austin.
Vermont.....	G. H. Perkins, Burlington.
Virginia.....	Thomas L. Watson, Charlottesville.
Washington.....	Henry Landes, Seattle.
West Virginia.....	I. C. White, Morgantown.
Wisconsin.....	W. O. Hotchkiss, Madison.
Wyoming.....	L. W. Trumbull, Cheyenne.

CHAPTER VI

RESUME OF THE COPPER INDUSTRY

In this chapter, the essential, vital facts concerning the Copper Industry, both of the United States and of all countries of the world are presented in a series of tables, giving price and production with trade statistics, covering imports, exports, and consumption. A list of copper smelting plants and refineries and their capacities and outputs, and of copper stocks, is supplemented by the figures for the Michigan field, and the Porphyry coppers.

The figures presented are mainly those of the Mineral Statistics Division of the U. S. Geological Survey, but the prices given are those reported by the Eng. & Mining Journal, for the excellent reason that all ore sales are settled upon these figures, and no other journal or organization has access to reports of sales, made by the four or five greatest selling agencies, handling 95% of the North American output.

The following table (from the Eng. & Mng. Journal) gives the essential figures of the Copper Industry for the past eleven years. The column headed "Pounds Reported" represents the sales of the eight largest producers aggregating 40% of the U. S. production, so that the prices given may be considered as representative of the entire industry.

Production, Sale and Price for Copper for 11 Years

Year	Total Production	Pounds Reported	Average Realized	Quotational Average
1905	219,000,000	82,372,955	15.597	15.699
1906	224,071,000	113,411,645	19.146	19.616
1907	220,317,041	66,316,025	18.043	20.661
1908	222,267,444	125,949,248	13.348	13.424
1909	226,602,134	136,005,773	13.211	13.335
1910	221,400,864	126,710,763	12.96	13.039
1911	216,412,867	135,329,098	12.657	12.634
1912	1,228,333,298	552,155,308	15.841	16.341
1913	1,406,448,665	658,533,402	15.222	15.269
1914	1,342,634,206	566,687,750	13.458	13.602
1915	1,411,652,418	619,832,987	17.299	17.275

Up to 1912 the figures represent Lake copper production and sales, 1912, and later figures represent electrolytic copper only. The figures for "pounds reported" and "average realized" do not include the United Metals Selling Co. (Anaconda), but John D. Ryan has stated that in the 10 years ending with 1913 his companies sold 5,560,000,000 lbs. of copper at an average of 14.82c, delivered to the buyers in Europe and America. This would be equivalent to 14.62 @ 14.67c, net cash, New York. During the same 10-year period, Phelps, Dodge & Co. reported an average of 14.56c per lb., net cash, New York, actually realized. The arithmetical mean of the quotational averages for electrolytic copper in this period is 15.06c.

The 1914 price is an average for nine months. Nb quotations in August, September and October. The bulk of the copper sold in 1914 was disposed of before and after those months. So the nine month's basis is approximately correct.

The figure for each company for 1915, a year of violent fluctuation with war demands and unusual conditions of delivery are given below.

Copper Sales in 1915

Company	Lb.	Proceeds	Av. Price
Chino	64,887,788	\$11,303,957	17.42c (a)
Miami	41,907,754	7,262,884	17.331 (b)
Nevada Consolidated	62,726,651	11,069,671	17.647 (a)
North Butte	19,725,510	3,294,752	16.703 (c)
Phelps, Dodge & Co.	194,925,668	31,342,098	16.079 (d)
Ray Consolidated	60,338,936	10,470,274	17.352 (a)
U. S. Sm., Ref. and Min.	26,923,674	4,895,532	18.183 (e)
Utah Copper Co.	148,397,006	26,235,331	17.679 (a)
Total	619,832,987		17.299
E. & M. J. average			17.275

(a) Probably figured on copper produced and sold in 1915 but partly delivered and paid for in 1916. Whether gross price or net price not stated. (b) Gross price. (c) Produced and delivered in 1915. Whether gross price or net price not stated. (d) Produced and delivered in 1915. Net price. (e) Average of sales. Whether gross price or net price not stated.

Commenting editorially on these figures, the E. & M. Journal says that it is uncertain whether the price given is gross, including freight to delivery point of the refined copper or is net, and it is probable that the figures given do not represent the same thing. The Phelps-Dodge report 16.079c, realized from copper produced, sold and delivered, while others include copper sold, but not delivered and paid until 1916. A further discrepancy between the prices shown in the above table is due to differences in reported sales. Steadily rising prices were accompanied by increased production, partly sold in 1915, but not delivered and paid for until 1916, is by some companies all included in 1915 figures; thus the North Butte Co. delivered 19,725,510 lbs. @ 16.703c per pound but sold 27,805,869 lbs. @ 18.114c.

The Utah, Nevada, Chino and Ray report an "aggregate 336,350,381 lbs. @ 17.524c. All this copper was sold by the American Smelting and Refining Co., which reported a production of 551,798,000 lbs. valued at 16.13c. The returns of other companies selling through that agency were more in line with the latter figure than the former. In 1914 there was no such discrepancy, for the matter of carry-over does not make so great a difference when the prices over the turn of the year is not very different, as often is the case. The Hayden-Jackling companies in 1914 reported 275,938,710 lbs. of copper sold at an average of 13.313c, while the American Smelting and Refining Co. reported a production of 529,686,000 lbs., valued at 13.46c."

 † New refinery of Anaconda company, now in construction, will have a capacity of about 180,000,000 pounds.
 ‡ All of the figures were officially furnished.

GRADES OF COPPER

LAKE.—Copper from the native copper mines of the Lake Superior district. The standard range of conductivity is 99.5%.

ELECTROLYTIC.—Copper refined by the electrolytic process and running 99.93% upwards for cathodes. Conductivity to 103%.

CASTING.—Copper analyzing 99 to 99.75% made from ore and scrap. Used for casting purposes.

BEST SELECTED.—British copper averaging 99.75% fine. Largely used in the British brass trades.

TOUGH.—British copper largely used for casting, rolling and drawing. Runs about 99.25%.

CHILI BARS.—Copper smelted in CHILI running 95 to 99% pure and in some cases carrying bullion.

STANDARD.—Practically anything running from 96% upwards, dealt in on London Metal Exchange.

MATTE.—A semi metallic compound made from ores and usually running from 25 to 55% copper. An intermediate product between the ore and the finished copper.

DESCRIPTION OF COPPER

WIRE BARS.—About 3" to 4" square and 3' to 7' long. Average weight 135 to 175 lbs. Used for wire drawing.

INGOTS.—Average weight about 18 to 20 lbs. Notched. Used for casting.

INGOT BARS.—Notched bars for casting. Weight about 55 to 60 lbs.

CAKES.—Weight 100 lbs. and upward. Used for rolling.

ANODES.—About 2' by 3', 1½" thick, weighing 250 lbs. Crude copper. Used by electrolytic refiners.

CATHODES.—About 2' by 3' but thicker at the top than the bottom. Refined copper from the electrolytic tanks which is run down to wire bars, etc.—From American Metal Market.

New York, cents per pound. London, pounds sterling per long ton of standard copper. * No quotations.

In explanation of the prices given in the Engineering and Mining Journal, the following quotation from that magazine is of interest:

"On any given day copper is apt to be sold at a range of price even when the market is stationary, such range exhibiting the competition among sellers and the shopping among buyers; also there are differences in price according to conditions of sale. In periods of activity there are, moreover, changes in price between the beginning and end of a day. In quoting figures in this annual review we have reference to what we have in our weekly market reports during the year computed as the daily average price. Quotations are reduced in terms of net cash, New York. Copper for domestic delivery is commonly sold on "regular terms." "Regular terms" in the sale of copper means that the seller delivers the copper to the buyer, paying the freight on it, and allows him 30 days after his receipt of the copper in which to make payment, or if he chooses to pay

cash, the bill is discounted at the rate of $\frac{1}{2}\%$. To arrive at the difference between a sale upon these terms and a cash sale f.o.b. refinery, which is regarded as being f.o.b. New York, the interest on the value of the copper while in transit is commonly reckoned. This is a matter of 10 days. When copper sells at $18\frac{1}{4}c$, regular terms, the equivalent net price is therefore about $18.03c$, there being $0.09125c$ discount, $0.1c$ freight and 0.0304 loss of interest, a total of $0.22c$. The freight rate is naturally a variable, being less to some nearby factories and more to some of the more remote ones. About $10c$ per 100 lbs. is regarded as being an average transportation cost."

In discussing the copper producing mines of America it is worth while remembering that a very large part of the silver production of the U. S. and a respectable part of the gold output come from our copper mines. In the last year, several copper companies have also become zinc producers. The new metallurgy has made the recovery of the latter metal profitable in ores formerly worthless because of the presence of zinc. Thus the copper mines around Kennett, Calif. yielded 315,549 tons copper ore in 1915 with a value of \$17.97 per ton, made up as follows: gold, \$1.51 per ton; silver, \$1.26 per ton; copper, \$11.96 per ton; zinc, \$3.24 per ton.

AVERAGE AMERICAN AND ENGLISH PRICES

The following table of average annual prices of copper in England and the United States is based upon the New York price for Lake copper and the London price for Standard copper. The two last columns give the American prices in cents and fractions and the English equivalent in sterling. English prices are for long tons of 2,240 pounds, and American prices for pounds avoirdupois, the last column, giving English equivalent of the American prices, being figured in long tons.

Year.	Lowest.	English Prices—				Average.	American Prices.

English prices for 1913, 1914, 1915 are from American Metal Market.

CONVERSION TABLE FOR AMERICAN AND ENGLISH PRICES

This table gives the equivalents, in American and English currency, for the prices of copper, from £35 to £150 per ton. The American basis of weight is the avoirdupois pound; the English basis is the long ton of 2,240 pounds avoirdupois. The rate of exchange is figured at £1=\$4.85:

Pounds Sterling and cents.		£ 93.....	20.14c.	£ 122.....	26.41c.

1915	1,776,250,869	1,652,775,822	84,666,380

COPPER PRODUCERS' STATISTICS

The monthly statistics of the Copper Producers' Association, which were suspended in August, 1914, at the outbreak of the war, have not been resumed. A summary of the statistics up to that time is given below:

Production of Refined Copper			Domestic Deliveries		
	Year	Monthly Average		Year	Monthly Average
1909	1,405,403,056	117,116,921	1909	705,051,591	58,754,299
1910	1,452,122,120	121,010,177	1910	749,426,542	62,452,212
1911	1,431,938,338	119,328,195	1911	709,611,605	59,134,300
1912	1,581,920,287	131,826,690	1912	819,665,948	68,305,495
1913	1,622,450,829	135,204,235	1913	767,351,760	63,945,980
1914*	835,137,652	139,189,609	1914*	330,643,117	55,107,186

Export Deliveries			Surplus Stocks		
	Year	Monthly Average		At beginning of year	Fluctuation
1909	680,942,620	56,745,218	1909	122,357,266	
1910	722,431,494	60,202,624	1910	141,766,111	+19,408,845
1911	754,902,233	62,908,520	1911	122,030,195	-19,735,916
1912	746,396,452	62,199,705	1912	89,454,695	-32,575,500
1913	869,062,784	72,421,898	1913	105,312,582	+15,857,887
1914*	489,822,739	81,637,123	1914	91,438,867	-13,873,715
			June 30, 1914	106,110,663	+14,671,796

*For six months ending June.

AMERICAN COPPER SUPPLY

The following table gives the figures of American copper supply, deliveries and stocks, according to the statistics gathered by the American Copper Producers' Association:

(Pounds Avoirdupois.)

	Stocks	Production	Deliveries	Changes
1909				
January	122,357,266	112,135,200	90,362,421	+ 21,772,779
February	144,130,045	103,700,817	74,546,614	+ 29,154,203
March	173,284,248	117,058,661	108,063,007	+ 8,995,654
April	182,279,902	113,574,292	112,656,121	+ 918,171
May	183,198,073	118,356,146	131,706,078	- 13,349,932
June	169,848,141	116,567,493	131,557,573	- 14,990,080
July	154,858,061	118,277,603	150,539,057	+ 32,261,454
August	122,596,607	120,597,234	107,996,911	+ 12,600,323
September	135,196,930	118,023,139	102,182,932	+ 15,840,207
Adjustment		3,007,738	2,572,103	+ 435,635
October	151,472,772	124,657,709	122,620,855	+ 2,036,854
November	153,509,626	121,618,369	122,124,468	- 506,094

(a)

(b)

(a) Production by the regular refining plants in 1915; (b) refined copper exported; both figures are from the advance statement, U. S. G. S., of production of copper in 1915.

AMERICAN COPPER IMPORTS

The following table, showing imports of copper, in various forms, into the United States, is summarized from the official figures of the United States government. The government statisticians have seen fit to vary the methods employed in presenting these figures, from time to time, but the present plan of giving contents in fine copper of imported ore and matte is preferable to the old plan of giving actual weight of imported ore and matte:

Year	(Pounds Avoirdupois)		Old Copper	Total Fine Copper
	Copper Contents Ore and Matte	Raw Copper		
1890	3,448,237	5,189	284,789	3,960,053
1891	8,391,554	2,556	134,407	11,472,436
1892	7,669,978	22,097	71,485	8,066,647
1893	7,256,015	554,348	59,375	11,045,297
1894	4,804,614	606,415	160,592	11,445,441

COPPER EXPORTS

The exports of copper to the various foreign countries for the six months ended June 30 in tons of 2,240 lbs. follow:

	1916.	1915.
United Kingdom	31,732	47,109
France	76,127	49,148
Germany	none	none
Holland	1,138	457
Belgium	none	none
Austria	none	none
Italy	23,723	23,965
Denmark	898	1,050
Norway and Sweden.....	7,223	10,567
Russia	5,053	3,151
China and Japan.....	71	49
Sundries	1,978	1,031
Total	147,943	136,527

OUR COPPER AND SPELTER EXPORTS

Copper has for years been an important factor in our foreign trade, but neither spelter nor brass was prominent in this respect until after the outbreak of the war.

From government statistics the Boston News Bureau has compiled figures giving a three years' comparison of 11 months' exports of copper, spelter and brass:

	1915-16	1914-15	1913-14
Copper, lbs.	631,457,750	627,211,836	893,776,295
Value	\$ 138,007,251	\$ 87,293,720	\$ 133,423,679
Spelter, lbs.	246,196,999	237,749,016	3,457,619
Value	\$ 40,563,710	\$ 18,281,791	\$ 369,667
Brass, lbs.	119,512,499	50,506,918	28,074,291
Value	\$ 132,909,153	\$ 16,284,267	\$ 6,842,434
Total value	311,480,114	121,859,778	140,635,780
Value, total exports.....	\$3,814,454,114	\$2,452,033,414	\$2,175,578,565

The recent monthly swing of copper, spelter and brass exports may be seen in the following pounds (000,000 omitted):

	—1916—			—1915—		
	Copper	Spelter	Brass	Copper	Spelter	Brass
January	57	28	12	58	31	5
February	56	28	19	56	30	6
March	65	17	20	67	16	12
April	47	20	17	68	18	8
May	74	27	18	51	15	7

Imports of copper from other countries have also been increasing, 1915-16, particularly from Peru and Chile, where the rapidly growing operations of Cerro de Pasco, Braden and Chile companies have swelled the shipments to this country. More than 238,000,000 pounds of zinc have been brought into the United States since June, 1915, against 52,000,000 pounds in the preceding year. The bulk of these imports came from Australia.

Avg. cost per lb.	13.44		f10.94	f13.4			
Average yield per ton milled	19.4	17.7					

a As this table includes mines reporting their output both for the calendar and for the fiscal year, and as some of the companies report the refined copper equivalent of mineral produced and others report refined copper, the totals do not necessarily agree with the total of either mine or smelter output.

b Figures for fiscal year ending June 30, 1913.

c Figures for fiscal year ending June 30, 1914. d Figures for fiscal year ending June 30, 1915.

e Figures for fiscal year ending June 30, 1916. f Does not include figures for Mass.

(a) Copper Range Co. owns practically all the stock of the Baltic Mining Co. and Trimountain Mining Co., and 50,000 shares of Champion Copper Co.; St. Mary's Mineral Land Co. owns the remaining 50,000 shares of Champion stock. Dividends of the operating companies have not been deducted from the totals; this duplicates a portion of the "Total dividends paid."

The average price received for all Lake Superior copper, from 1845 to 1916, inclusive, was 14.375 cents per pound, with average dividends of 3.702 cents per pound, leaving an estimated cost of 10.673 cents for all years. While this may be accepted as an arbitrary figure, the cost might very properly be figured materially higher. By adding \$60,000,000 to the cost of production, for money lost in unproductive ventures, the cost of copper produced would be made almost 11.5 cents per pound. By adding another \$15,000,000 for assessments on mines that have since repaid in dividends the original assessments, cost of copper would be increased to about 11.85 cents per pound, leaving a net margin of profit, for the entire production, of almost exactly 2 cents per pound, plus the present aggregate values of the mines, which would be about equal to total dividend disbursements to date, or about 3.5 cents per pound.

Omitting the production of mines that have not proven profitable, the average cost of copper produced by dividend-paying Lake Superior mines probably has been about 9.5 cents per pound, for all years.

CONSUMPTION OF COPPER IN EUROPE

European consumption of copper according to A. Hirsch & Sohn; in tons of 2,240 lbs.

CHAPTER IX

OBSOLETE SECURITIES AND CORPORATIONS.

A LIST OF DORMANT OR DEAD MINING COMPANIES.

This is a list of mining companies that are merged, dead, liquidated, dissolved, bankrupt or otherwise out of business. It possibly also includes a few companies that have been inactive for years and have been reported by local authorities as dead. As complete sets of the Copper Handbook are not accessible to many readers, excerpts from former volumes, describing any company in this list, when the volume is in stock, will be furnished for 50 cents each by the Mines Handbook office, 29 Broadway, New York.

Any errors will be gladly corrected on receipt of authentic information.

- Aberdeen C. Co. Lordsburg, N. M. See Vol. V.
Accidental M. & M. Co. Granite, Colo. See Vol. VI.
Acme M. & M. Co. Cotopaxi, Colo. See Vol. X.
Ada Copper Mining Co., Basin, Mont.
Adams C. Co. Saratoga, Wyo.
Adams C. M. & Ref. Co. Steamboat Springs, Colo. See Vol. X.
Admiral Togo-Ely C. Co. Formerly at Ely, Nev. See Vol. VIII.
Aduddell Mines Co. Merged, 1910, in Frontenac Cons. Mines, Central City, Colo.
Advance Dev. & M. Co. Bisbee, Ariz. See Vol. VIII.
Aeolian Copper Cons. Mng. Co., Ltd. Succeeded by Columbia Copper Co.
Aetna G. & C. M. Co. Bingham Canyon, Utah. See Vol. X.
Aetna M. Co. Bonanza, Colo. See Vol. X.
African Noble Duke G. & C. M. Co. Bisbee, Ariz.
Afro-American M. & M. Co. Butte, Mont. See Vol. VIII.
Afterthought M. Co. Lands sold to Great Western G. Co., succeeded, 1909, by Afterthought C. Co., Redding, Cal.
Afton M. & S. Co. Helena, Mont. See Vol. V.
Agassiz M. Co. Ray, Ariz. See Vol. VI.
Ajax M. Co. Merged, 1909, in Gold Chain M. Co. See Vol. VIII.
Ajo C. Co. Ajo, Ariz. See Vol. X.
Ajo C. Mountain Mines Co. Property sold, 1907, to Rendall Ore Red. Co. See Vol. VIII.
Ak-Sar-Ben C. Co. Merged, 1907, in Shawnee-Wyo. C. Mg. Co. Carbon, Wyo.
Alabama G. & C. Co. Orogrande, N. M. See Vol. VIII.
Aladdin Mng. Co. Clinton, Mont. See Vol. XI.
Alamo C. Co. Tucson, Ariz.
Alamos Silver & C. Co. Succeeded by Alamos M. Co. Alamos, Mex.
Alaska Amalgamated C. Co. Succeeded, 1907, by Alaska United C. Ex. Co.
Alaska C. Ass'n. Valdez, Alaska. See Vol. VIII.
Alaska C. Co. Ely, Nev. See Vol. VIII.

- Alaska Copper & Coal Co. Dissolved 1915. Formerly owned Kennecott mines.
- Alaska Dev. Co. McCarthy's Creek, Alaska. See Vol. VIII.
- Alaska-Galena M. Co. Ketchikan, Alaska. See Vol. X.
- Alaska G. & C. Co. Succeeded, 1907, by Chisna Cons. Mines Co. McCarthy's Creek, Alas.
- Alaska Imperial M. Co., Ketchikan, Alaska. See Vol. VI.
- Alaska Mines Securities Co. Hadley, Alaska. See Vol. VIII.
- Alaska M. Co. Silver City, Utah. See Vol. VIII.
- Alaska Northwest C. Co. Sidney Inlet, Victoria, B. C. See Vol. V.
- Alaska S. & R. Co. Hadley, Alaska. See Vol. VIII.
- Albany Copper Co. Morningstar, Nev. Supposedly dead; mail returned.
- Albayside; *Cia Min. De. Gomez del Palacio, Mex.* See Vol. X.
- Alberni G. & C. Co., Ltd. Alberni, B. C. See Vol. V.
- Alessandro C. M. Co. Lands sold, 1908, to Copper Gulf M. Co. See Vol. VI.
- Alexandria G. & C. M. Co. Randsburg, Cal. See Vol. VIII.
- Algona Commercial Co., Ltd. Property sold, 1912, to Dominion Nickel Co. Sault Ste. Marie.
- Alice Dev. Co. Succeeded by Alice G. Mills Corp. See Vol. IX.
- Alice G. M. Co. Chewelah, Wash. See Vol. VI.
- Alleghony M. Co. Belvidere, N. J. See Vol. VIII.
- Allen M. Co. Old Glory, Ariz. See Vol. X.
- Alliance C. Co. Greenwood, B. C. See Vol. VIII.
- Alliance C. M. Co. Absorbed, 1902, by Iconoclast Cons. Mines Co., Keller, Wash.
- Alma May C. Co. Lost lands, 1908. Holmes, Wyo. See Vol. VIII.
- Alma M. & M. Co. Cañitas, Mex. See Vol. VIII.
- Almado & Terito Cons. M. Co. Succeeded by Nag. Min. de Clemente Ybarra. Alamos, Mex. See Vol. V.
- Almeda M. Co. Succeeded, 1905, by Almeda Cons. Mines Co. Galice, Ore.
- Almonte C. Co. Hanover, N. M. See Vol. VIII.
- Alpena Copper Mng. Co. Saltse, Mont. Dead, 1914.
- Alpha C. Co. Property sold at sheriff's sale, June, 1912, to Geo. H. Gardner, for \$5,000 subject to \$315,000 mortgage of Manhattan Trust Co., N. Y., and \$2,500 mtge. of Camden Safe Deposit, N. Y. City. Somerville, N. J. See Vol. X.
- Alphabet C. Co. Courtland, Ariz. See Vol. VIII.
- Alpha Mining Co. Dolomi, Alaska. See Vol. XI.
- Alsacia Dev. Co. Reorganized, 1905, as Alsacia M. Co., Fronteras, Sa. Mex.
- Alsacia M. Co. Fronteras, Mex. See Vol. VIII.
- Alta C. Co. Succeeded, 1908, by Alta Montana C. Co. Corbin, Mont.
- Alta C. Mines. Succeeded, 1909, by Boston & Alta C. Co. Corbin, Mont.
- Alta C. M. Co. Ketchum, Idaho. See Vol. VIII.
- Alta Crown C. Co. Ivanpah, Cal. See Vol. VIII.
- Alta & Hecla M. & M. Co. Merged, 1910, in South Hecla M. Co. See Vol. VIII.
- Alta M. & M. Co. Merged, 1907, in Ibex M. Co., Eureka, Utah.
- Alta M. & M. Co. Lusk, Wyo. See Vol. VIII.
- Alta Mizpah C. & G. M. Co. Alta, Utah. See Vol. VIII.
- Alta-Montana Co. Succeeded by Helena M. & Red. Co. Shares worthless.
- Alta-Montana C. Co. Succeeded, 1909, by Boston & Alta C. Co. Corbin, Mont.
- Alta-Quincy M. Co. Merged, 1906, in South Columbus M. Co. Alta, Utah.
- Alta-St. Louis M. Co. Alta, Utah. See Vol. X.

- Alta-Superior M. Co. Alta, Utah. See Vol. VIII.
- Alta-Zoani Mining Co. Hamilton, Nev.
- Altata M. Co. Chloride, Ariz. See Vol. X.
- Alto C. Co. Reorganized, 1909, as Cons. Mines, Smelter & Trans. Co. Patagonia, Ariz.
- Alto M. Co. Lands sold, 1908, to Leontine Cons. M. Co. Poland, Ariz.
- Alton M. Co. Needles, Cal. See Vol. X.
- Altona M. Co. Grand Forks, Idaho. See Vol. X.
- Amador Copper & Gold Mng. & Mfg. Co. Iron Mountain, Mont. Property held by Intermountain Copper Mining Co.
- Amalgamated Arizona C. Co. at Swansea, Ariz. See Vol. X.
- Amalgamated C. M. & Extr'n. Co. Merged, 1909, in Hecla Cons. Mines Co., Hecla, Wyo.
- Amalgamated G. & C. Co. Huron, Ariz. See Vol. VI.
- Amalgamated Greenwater C. Co. Greenwater Cal. See Vol. VIII.
- Amalgamated Metal & Expl'n Co. Reorganized, 1910, as Amalgamated Metals Co., Jerome, Ariz.
- Amalgamated Metals Co. Liquidated, 1913. Jerome, Ariz.
- Amarillo M. Co. Property sold to Jarilla Cons. C. Co., 1912. Jarilla, N. M.
- Amazon-Butte C. Co. Property relinquished. Butte, Mont. See Vol. X.
- Amazon C. M. Co. Victorville, Cal. See Vol. VIII.
- Amazon-Montana Dev. Co. Property reverted to former owners. Amazon, Mont. See Vol. X.
- America-Britannia M. Co. Baring, Wash.
- America M. Co., S. A. Transferred property to San Pedro C. Co., S. A. Cananea, Mex.
- American Banner C. Co. Property sold, 1910, to Inspiration C. Co., Globe, Ariz.
- American Cons. C. Co. Butte, Mont. See Vol. VIII.
- American Cons. C. Co. Santa Fé, N. M. See Vol. V.
- American C. Co. Succeeded, 1905, by American C. & G. Co., also dead. See Vol. X.
- American C. M. Co. Succeeded, 1909, by Alpha C. Co. Somerville, N. J. See Vol. VIII.
- American C. M. & Extr'n. Co. Denver, Colo. See Vol. V.
- American C. M. & S. Co. Was a swindle, promoted by J. R. Keer & Co.
- American Dev. Co. Merged, 1906, in American-Saginaw Dev. Co. See Vol. VI.
- American Dev., M. & Red. Co. Silver City, N. M. See Vol. X.
- American Eagle C. M. Co. Encampment, Wyo. See Vol. X.
- American G. & C. Co. Globe, Ariz. See Vol. X.
- American G. & C. Co. Merged, 1904, in Poland-American G. M. & M. Co. Morristown, Ariz. See Vol. XI.
- American G. & C. M. Co. Jelm, Wyo. See Vol. VI.
- American G. M. Co. of New Mexico. Nogal, N. M. See Vol. VIII.
- American Gulch M. Co. Bingham Canyon, Utah. See Vol. VIII.
- American Metals Co. Organ, N. M. See Vol. VIII.
- American Mines Dev. Ass'n. Needles, Cal. See Vol. X.
- American Mines Dev. Co., Ltd. Globe, Ariz. See Vol. VIII.
- American Mines & Expl'n Co. Hillside, Ariz. See Vol. X.
- American M. Co. Central Mine, Mich. See Vol. VIII.
- American M. Co. Callao, Utah. See Vol. VI.
- American M. Co. Monte Cristo, Wash. See Vol. X.
- American M. & Dev. Co. French Corral and Sweetland, Cal. See Vol. X.
- American M. & Dev. Co. Naco, Mex. See Vol. VIII.
- American M., M. & S. Co. Was a brazen swindle. See Vols. VI and VII.

- American M. & S. Co. Twisp, Wash. See Vol. X.
 American Prospecting & Dev. Co. Jerome, Ariz. See Vol. X.
 American Queen M. Co. Lands passed to Colorado-Arizona Mines Co. Gold Hill, Colo.
 American-Saginaw Dev. Co. Liquidated, property sold to Calumet & Ariz. M. Co. Warren, Ariz.
 American Smelters Expl'n. Co. Changed name, 1905, to American Sm. Sec. Co.
 American Venture Co. Ayutla, Mex. See Vol. VIII.
 American Zinc Extraction Co. Tucson, Ariz. See Vol. VI.
 Amygdaloid M. Co. Lands sold, 1905, to Calumet & Hecla M. Co. Central Mine, Mich.
 Anaconda Cons. C. Co. of Greenwater, Greenwater, Cal. See Vol. VIII.
 Anaconda-Corral Cons. Mines Co. Bouse, Ariz. See Vol. VIII.
 Anaconda M. Co. Dissolved, 1907. Parent of Anaconda C. M. Co. Butte, Mont.
 Anaconda Mizpah C. Co. Merged, 1907, in Ely-National C. Co. Ely, Nev.
 Anaconda-Sonora C. Co. Sahuaripa, Mex. See Vol. VIII.
 Anderson M. Co. Alberní, B. C. See Vol. X.
 Angang C. Co. Chiranganguero, Mex. See Vol. X.
 Anganguero; Cia. Met. de. Anganguero, Mex. See Vol. VIII.
 Angel M. Co. Wickenburg, Ariz. See Vol. X.
 Anglo-American C. Co., Ltd. Succeeded, 1907, by Ray Cons. C. Co. Kelvin, Ariz.
 Anglo-American C. M. Co. of Parry Sound, Ltd. Parry Sound, Ont. See Vol. VIII.
 Anglo-American Dev. Co. Barranca de Cobre, Mex. See Vol. X.
 Anglo-American G. & C. Co. Cananea, Mex. See Vol. IV.
 Anglo-Butte C., Ltd. Liquidated, 1909. Butte, Mont.
 Anglo-Mexican M. & Ex. Co. Guachinango, Mex. See Vol. X.
 Animas M. & S. Co. Llano, Mex. See Vol. VIII.
 Anita Cons. C. Co. Reorganized, 1903, as Anita C. Co. Williams, Ariz.
 Anita C. Co. Property sold, under foreclosure. Succeeded by Titanic C. Co. Williams, Ariz.
 Anita M. Co. Ocotlán, Jalisco, Mex. See Vol. VI.
 Annabel M. Co. Merged, 1909, in Hillside Cons. M. Co. Cherry, Ariz.
 Antelope Mining Co. Eureka, Utah.
 Apache Chief M. Co. Lands sold, 1907, to Ariz. Success. M. Co., Salome, Ariz.
 Apache C. Co. Bouse, Ariz. See Vol. VIII.
 Apache Dev. Co. Lands sold, 1907, to Anderson-Apache C. Co. Hachita, N. M.
 Apex C. Co. Lost River, Idaho. See Vol. VIII.
 Apollo C. M. & M. Co. Frisco, Utah. See Vol. V.
 Arapahoe Copper Mng. Co. Oro Blanco, N. M. See Vol. XI.
 Arcade-Ariz. M. Co. Silver Bell, Ariz. See Vol. X.
 Arcadian C. Co. Succeeded by New Arcadian C. Co. Houghton, Mich.
 Arc Group M. Co. Kettle Falls, Wash. See Vol. X.
 Arctic C. M. Co. Lake Mine, Mich. See Vol. I.
 Arctic M. Co. Absorbed by Victoria C. M. Co., Mich.
 Argenta Mines Co. Ainsworth, B. C. See Vol. VIII.

Elkton Consolidated Mining & Milling Co.
- Winther, A. S.**, Bingham, Utah.
Utah Consolidated Mining Co.
- Wolfe, E. A.**, Chewelah, Wash.
United Copper Mining Co.
- Wood, Jas.**, Douglas, Ariz.
Smelter Supt., Calumet & Arizona Mining Co.
- Woods, Thos. H.**, Telluride, Colo.
Mill Supt., Camp Bird, Ltd.
- Woodward, F. A.**, Copper Hill, Ariz.
Iron Cap Copper Co.
- Word, W. F.**, Helena, Mont.
Helena Mining Bureau, Inc.
- Wren, A. A.**, Ray, Ariz.
Supt. of Drilling, Ray Hercules Copper Co.
- Wright, Albert P.**, Mancayan, Lepanto, Luzon, Philippines.
Lepanto Mining Co., Inc.
- Young, E. L.**, French Gulch, Calif.
Hazel Gold Mining Co.
- Young, E. P.**, 1020 Blake Ave., Glenwood Springs, Colo.
Pine Martin Mining Co.
- Zabriskie, Chas.**, Eureka, Utah.
Iron Blossom Copper Mining Co.
- Zane, O. P.**, Bisbee, Ariz.
Empire State Mining Co.
- Zeigler, W. L.**, Osborne, Idaho.
Silverado Mining Co.

*Back Volumes and
Complete Sets of the*

Copper Handbook

¶ There remain on hand but a limited number of Complete Sets of the Copper Handbook in cloth binding. Orders for these sets, or for **single numbers therefrom**, will be filled at the following prices:

*Volumes I to XI—cloth bound,
\$3.00 each, or the set for \$25.00*

¶ Orders will be filled at these prices while the books last, but the right is reserved to cancel single orders received after the number of extra copies has been reduced to a point where only complete sets remain on hand.

**Address: Stevens Copper Handbook Co.
29 Broadway - New York, N. Y.**

CHAPTER XI

GEOGRAPHICAL LIST OF ALL MINING COMPANIES, ARRANGED BY STATES (DISTRICTS OR TOWNS)

UNITED STATES

American Metal Co., Ltd. (The).
American Smelters Securities Co.
American Smelting & Refining Co.
American Zinc, Lead & Smelting Co.
American Zinc Ore Separating Co.
Anaconda Copper Mining Co.
Development Company of America.
Empire Zinc Company of Colorado.
General Development Co.
Girard Development Co.
Guggenheim Exploration Co.
International Metals Selling Co.
International Nickel Co.
International Smelting Co.
Metallurgical Company of America.
Phelps Dodge & Co.
United Copper Co.
United States Smelting, Refining & Mining Co.
United States Smelting, Refining & Mining Exp. Co.
Virginia Zinc & Chemical Corporation, Ltd.

ALASKA

Alaska Consolidated Mining & Smelting Co., Sulzer.
Alaska Copper & Coal Co., Copper Centre.
Alaska Copper Corporation, nr. Strelna.
Alaska Ebner Gold Mines Co., Juneau.
Alaska Gastineau Mining Co., Juneau.
Alaska Gold Belt Mining Co., Juneau.
Alaska Gold & Copper Mining Co., Iliamna.
Alaska Gold Exploration & Development Co., Knik dist.
Alaska Gold Mines Co., Juneau.
Alaska Free Gold Mining Co., Willow Creek dist.
Alaska-Iliamna Copper Co., Iliamna.
Alaska Industrial Co., Sulzer.
Alaska Juneau Gold Mining Co., Juneau.
Alaska Metals Co., Bruce, Prince of Wales Island.
Alaska Mexican Gold Mining Co., Douglas Island.
Alaska Treadwell Gold Mining Co., Douglas Island.
Alaska United Copper Exploration Co., Dan Creek.
Alaska United Gold Mining Co., Dan Creek.
Alaska Westover Copper Co., Chitina.
Alice Mining Co., Valdez.

Beatson Copper Co., Latouche.
Beaver Mountain Mining Co., Sulzer.

Cameron-Johnson Gold Mining Co., Valdez.
Chichagoff Mining Co., Chichagoff Island.
Chisna Consolidated Mines Co., Landlock.
Cymru Copper Co., Baldwin.

Dan Creek Gold & Copper Co., Nizina.

Eagle River Mining Co., Echo Harbor.
Ellamar Mining Co., Ellamar.

Fidalgo-Alaska Copper Co., Ellamar.

Galena Bay Mining Co., Valdez.
Gold Bullion Mining Co., Willow Creek dist.
Gold King Mining Co., Valdez.
Granite Gold Mining Co., Valdez.
Great Britain Group, South Valdez Island.
Great Northern Development Co., Phillips.

Hemple Copper Mining Co., Landlock.
Houghton-Alaska Exploration Co., McCarthy Creek.
Hydah (Haidah) Copper Co., Kasaan P. O., Prince of Wales Island.
Hubbard-Elliott Copper Co., Elliott Creek.

Independence Gold Mining Co., Seward.
It Mining Co., Ketchikan.

Jualin Alaska Mines Co., Juneau.

Kansas Copper Co., Copper Centre.
Kenai-Alaska Gold Mining Co., Seward.
Kennecott Copper Corporation, Kennecott and Latouche.

Lakinaw Tagish Co., Moira Sound.
Landlock Bay Copper Mining Co., Landlock.
Latouche Copper Mining Co., Latouche.
Latouche Island Copper Mining Co., Ltd., Latouche.

Mother Lode Copper Mines Co. of Alaska, Kennecott.
Mount Andrew Iron & Copper Co., Kasaan Peninsula, Prince of Wales Id.

Nestor Mining Co., Hadley.
Northern Light Development Mining Co., Prince William Sound.
Northland Copper Gold Group, Ketchikan.
North Midas Copper Co., Strelina.
Niblack Copper Co., Niblack.

Pandora Syndicate, Knights Island.

Ramsey-Rutherford Gold Mining Co., Valdez.
Ready Bullion Copper Co., Juneau.
Regal Mines Co., Kennecott.
Reynolds-Alaska Development Co., Latouche.
Rush & Brown Group, Kasaan.

Sea Coast Mining Co., Valdez.
Seattle Alaska Copper Co., Latouche.
Standard Copper Mines Co., Landlock.

Three Man Mining Co., Landlock Bay.

United Metals Co., Coppermount.

Victory Copper Mining Co., Ketchikan.
 W. A. Dickey Copper Co., Ellamar.
 Willow Creek Mines Co., Willow Creek dist.
 Yukon Gold Co., Yukon Territory.

ARIZONA

INSEPARABLE!

MONARCH FURNACES—SATISFACTION

For Years we have specialized in Metal Melting equipment and offer in the extensive MONARCH LINE, furnaces to meet the most exacting needs of refining and reducing Ores, Metals, Bullions, Minerals, etc.

MONARCH FURNACES embody utmost ECONOMY and SIMPLICITY in installation and operation, combined with DURABILITY and STURDINESS in construction. They do away with expensive crucibles and can be operated successfully with Oil, Gas, Coke and Coal Fuels.

The Patented "Simplex" Single Chamber Non-Crucible Furnace

For Oil or Gas and Air

This type gives larger melting output and is very popular, being installed in batteries in leading plants with marked success. Gives a quality of metal equal to that melted in crucibles but in larger quantities and in less melting time.

CAPACITIES

- No. 92—500 lbs. Brass per heat.
8 heats per day.
- No. 93—1000 lbs. Brass per heat.
6 heats per day.
- No. 94—2000 lbs. Brass per heat.
5 heats per day.

Write for Special No. 22 Copy of "Treatment of Cyanide Precipitate" by Herbert A. Megraw, for Practical Mill Men.

Monarch - Rockwell Double Chamber Melting Furnace

For Oil or Gas and Air

In this furnace the chambers can be used separately or together; melting one or two metals at the same time under one burner. The flame does not impinge on metal, but heats by radiation as it diffuses itself in vacuum zone above metal line. A remarkable producer both for quality and quantity. Send for series 33.

Canada's Mines and Minerals

- ¶ Few countries are experiencing such rapid development as Canada. The mineral resources are proving to be enormous. New districts are being opened up at frequent intervals.
- ¶ To serve the Canadian Mining industry we publish twice a month the "*Canadian Mining Journal*." In this Journal, in addition to technical information, we publish news from all the mining districts. We aim to keep our readers informed concerning developments in all parts of the Dominion. "*The Canadian Mining Journal*" is the only publication which covers the field. If you want to keep informed you should be a subscriber. The rate to addresses outside of Canada is \$3.00 per year. Send for a sample copy.
- ¶ To meet the demand for a reference book containing information concerning Canada's minerals and mining companies, we have published "*The Canadian Mining Manual*", edited by Reginald E. Hore, editor of the Canadian Mining Journal. If you want information concerning any mining company operating in the Dominion, you will find this manual useful. The 1915 edition is a book of 432 pages, well illustrated and cloth bound. The price is \$2.00.

The Canadian Mining Journal

263-5 Adelaide St. W.

Michigan College of Mines

A state institution offering engineering courses leading to the degree of Engineer of Mines. Located in the Lake Superior mining district. Mines and Mills accessible for college work. For Year Book and Booklet of Views, address President or Secretary.

HOUGHTON

MICHIGAN

The MACKAY SCHOOL OF MINES

UNIVERSITY OF NEVADA, RENO, NEVADA

Endowed by Marie Louise Mackay and Clarence Hungerford Mackay

Offers a four year course leading to the degree of Bachelor of Science in Mining, a year's post-graduate course leading to the degree of Master of Science in Mining, the professional degree of Engineer of Mines to graduates, and a Prospector's Short Course of one month.

Individual instruction; fine equipment; the big Nevada mines within easy reach, beautiful location; delightful climate; low expenses; no tuition fees.

You Ought to Know Every Ore and Mineral of Commercial Value

You can readily become thoroughly acquainted with these by purchasing my **SPECIAL**

100 SPECIMEN COLLECTION

This collection contains every important mineral specie. In size they are from one to three inches and crystallized whenever possible. Name of each specimen is adhered to it as well as locality and chemical nature. It is a beautiful collection and placed in a cabinet makes a most attractive display.

The Cost of This Collection is but \$20, Delivered

Every Mining Engineer, Mine Manager and Superintendent, Mining Company, Student, Prospector, etc., would find this collection of much usefulness. It is the best and most practical collection ever devised at the low cost.

A pamphlet of this collection cheerfully sent for the asking.

I can supply you with specimens of any known mineral and collections from \$5 up to \$1,000.

I am always in the market to purchase mineral specimens and collections.
